NOIDA INSTITUTE OF ENGINEERING & TECHNOLOGY, GREATER NOIDA, GAUTAM BUDDH NAGAR
(AN AUTONOMOUS INSTITUTE)

A student will be eligible to get Under Graduate degree with Honours only, if he/she completes the additional MOOCs courses such as Coursera certifications, or any other online courses recommended by the Institute (Equivalent to 20 credits). During Complete B.Tech. Program Guidelines for credit calculations are as follows.

1. For 6 to 12 Hours =0.5 Credit
2. For 13 to 18 =1 Credit
3. For 19 to 24 =1.5 Credit
4. For 25 to 30 =2 Credit
5. For 31 to 35 =2.5 Credit
6. For 36 to 41 =3 Credit
7. For 42 to 47 =3.5 Credit
8. For 48 and above =4 Credit

For registration to MOOCs Courses, the students shall follow Coursera registration details as per the assigned login and password by the Institute these courses may be cleared during the B. Tech degree program (as per the list provided). After successful completion of these MOOCs courses, the students shall provide their successful completion status/certificates to the Controller of Examination (COE) of the Institute through their coordinators/Mentors only.

The students shall be awarded Honours Degree as per following criterion.

- i. If he / she secures 7.50 as above CGPA.
- ii. Passed each subject of that degree program in the single attempt without any grace.
- iii. Successful completion of MOOCs based 20 credits

| Course Code: BCSCC0301 | | | | Course Name: Employability Skill Development – I | | | | | L | T | P | C | |
| Course Offered in: III Semester | | | | | | | | | 2 | 0 | 0 | 2 | |
| Pre-requisite: Programming Language C | | | | | | | | | | | | | |
| Course Objectives: This course introduces the fundamentals of computer systems, basic mathematics for computing, and software development principles. It emphasizes algorithm design and C++ programming skills. Through hands-on practice and project-based learning, students develop problem-solving abilities and teamwork while creating real-world applications, mini-games, and simulations, enhancing both technical and collaborative competencies | | | | | | | | | | | | | |
| Course Outcome: After completion of the course, the student will be able to | | | | | | | | | | | Bloom's Knowledge Level (KL) | | |
| CO1 | | Apply sets, relations, functions to computational problem-solving | | | | | | | | | K3 | | |
| CO2 | | Understand and implement the steps in the software development life cycle using logical reasoning and flowcharts. | | | | | | | | | K3 | | |
| CO3 | | Design and develop small-scale software projects or games using structured programming and project-based approaches. | | | | | | | | | K6 | | |
| CO4 | | Collaborate in teams to plan, develop, and present a complete software project, demonstrating problem-solving and communication skills. | | | | | | | | | K6 | | |
| CO-PO Mapping (Scale 1: Low, 2: Medium, 3: High) | | | | | | | | | | | | | |
| CO-PO Mapping | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PSO1 | PSO2 |

| CO3 | 3 | 3 | 3 | 2 | - | - | - | 2 | - | - | - | 3 | 1 |
| CO4 | 3 | 3 | 3 | 3 | - | - | - | 2 | - | - | - | 1 | 2 |
| Course Contents / Syllabus | | | | | | | | | | | | | |
| Module 1 | | Foundations of Computer Systems and Mathematical Concepts | | | | | | | | | 4 hours | | |
| Computer System Fundamentals: Introduction to Assembler, Compiler, Interpreter, Role of Loader and Linker in program execution. | | | | | | | | | | | | | |
| Mathematical Foundations for Computing: Sets, Relations, and Functions: definitions and applications, Principle of Mathematical Induction and its use in proofs. | | | | | | | | | | | | | |
| Module 2 | | Software Development Fundamentals | | | | | | | | | 6 hours | | |
| Introduction to Software Development Life Cycle, Step-by-step solution to simple problems, Developing logic/flowchart/pseudocode, simple games, puzzles, Step-wise refinement and Procedural Abstraction | | | | | | | | | | | | | |
| Module 3 | | Project-Based Learning | | | | | | | | | 10 hours | | |
| Introduction to the basics of C++, Implementation of control structures through practical tasks such as creating a number guessing game using loops and conditions, Functions and scope demonstrated by developing a menu-driven applications using user-defined functions, implement simple logic-based games including puzzles, tic-tac-toe, Hangman etc., the concept of pointers and dynamic memory allocation is introduced by creating a dynamic leader board to store player scores. File handling in C++ to save high scores or game states to external files. | | | | | | | | | | | | | |
| Module 4 | | Project/Game Development | | | | | | | | | 10 hours | | |
| Project Planning & Development (Teams, roles, idea pitching, develop C++ game or simulation), Mini Project, Project Demonstration and Review | | | | | | | | | | | | | |

| | | | | | | | | |

Pre-requisite: B.Tech. Ist Year Syllabus

Course Objectives: The objective of this course is to familiarize the students with concepts of Probability and statistical techniques. It aims to equip the students with adequate Knowledge of statistics that will enable them in formulating Problems and solving problems analytically.

| | | |
|--|---|-------------------------------------|
| Course Outcome: After completion of the course, the student will be able to | | Bloom's Knowledge Level (KL) |
| CO1 | Apply the concept of moments, skewness and kurtosis in relevant field. | K3 |
| CO2 | Apply the concept of correlation, regression and curve fitting with real world problems. | K3 |
| CO3 | Apply the concept of probability and random variable. | K3 |
| CO4 | Apply the concept of Mathematical Expectations and Probability Distribution in real life problems. | K3 |
| CO5 | Apply the concept of hypothesis testing and statistical quality control to create control charts. | K3 |

Course Contents / Syllabus

| | | |
|--|--|-----------------|
| Module 1 | Statistical Techniques-I | 6 hours |
| Introduction: Measures of central tendency: Mean, Median, Mode, Standard deviation, Quartile deviation, Moment, Skewness, Kurtosis. | | |
| Module 2 | Statistical Techniques-II | 10 hours |
| Curve Fitting, Method of least squares, fitting of straight lines, Fitting of second-degree parabola, Exponential curves, Correlation and Rank correlation, Linear regression, nonlinear regression and multiple linear regression. | | |
| Module 3 | Probability and Random Variable | 10 hours |
| Random Variable: Definition of a Random Variable, Discrete Random Variable, Continuous Random Variable, Probability mass function, Probability Density Function, Distribution functions. | | |
| Multiple Random Variables: Joint density and distribution Function, Properties of Joint Distribution function, Marginal density Functions, Conditional Distribution and Density, Statistical Independence, Central Limit Theorem (Proof not expected). | | |
| Module 4 | Expectations and Probability Distribution | 10 hours |
| Expectations of single Random Variable, Mean, Variance, Moment Generating Function, Binomial, Poisson, Normal, | | |

Exponential distribution

| | | |
|-----------------|--|-----------------|
| Module 5 | Hypothesis Tests and Control Charts | 12 hours |
|-----------------|--|-----------------|

Testing a Hypothesis, Null hypothesis, Alternative hypothesis, Level of significance, Confidence limits, Test of significance of difference of means, Z-test, t-test and Chi-square test, F-test, One way ANOVA.

Statistical Quality Control (SQC), Control Charts, Control Charts for variables (Mean and Range Charts), Control Charts for Variables (p, np and C charts).

| Course Contents / Syllabus | | | | | | | | | | | | | | | |
| Unit 1 | | | | Fundamentals & Shell scripting | | | | | | | | 04 hours | | | |
| Fundamentals of Operating Systems Overview of Operating Systems, Generations of OS, Operating system architecture, Interrupt handling, System call and kernel, Types of Operating System: Batch OS, Multiprogramming OS, Multitasking OS, Multiprocessor OS, Real time OS. | | | | | | | | | | | | | | | |
| Shell Scripting in Linux Introduction to Linux Operating System & Architecture, Basic Command Line Interface (CLI) Operations in Linux, Shell Scripting Basics: Variables, Control Structures, Functions | | | | | | | | | | | | | | | |
| Applications: Automating system administration tasks using shell scripts in Ubuntu/Linux (e.g., backup scheduling). | | | | | | | | | | | | | | | |
| Unit 2 | | | | Process & Thread Management | | | | | | | | 08 hours | | | |
| Process Management: - Process, Transition Diagram, Process Control Block (PCB), Types of Schedulers: Long Term, Mid Term, Short Term Scheduler, | | | | | | | | | | | | | | | |
| CPU Scheduling- Pre-emptive and Non-Pre-emptive Algorithm (FCFS, SJF, SRTF, Non-Pre-emptive Priority, Pre-emptive Priority, Round Robin, Multilevel Queue Scheduling and Multilevel Feedback Queue Scheduling) | | | | | | | | | | | | | | | |
| Thread: - Processes Vs Threads, Thread states, Benefits of threads, Types of threads, Multithread Model, Concept of Hyper-Threading | | | | | | | | | | | | | | | |
| Applications: Analyse and implement CPU Scheduling in Real-Time Embedded Systems and RTOS | | | | | | | | | | | | | | | |
| Unit 3 | | | | Concurrency and Deadlock Management | | | | | | | | 08 hours | | | |

| | | |
|---|---|-----------------|
| Concurrency: Introduction of Concurrency, Types of Process, Race Condition, Critical Section, Inter Process Communication, Producer consumer problem. Process Synchronization: Lock variable, Peterson’s Solution, Strict alternation, Lamport Bakery Solution, Test and set lock, Semaphore- counting, binary and monitor, Classical Problem of Synchronization: - Bound Buffer, Dinning Philosopher, Reader writer, Sleeping barber. Deadlock: Deadlock, Deadlock characterization, Deadlock Prevention, Deadlock Avoidance: Bankers Algorithms, Deadlock Detection, Recovery from Deadlock. Applications: Deadlock avoidance in database transaction management systems like Oracle or MySQL. | | |
| Unit 4 | Memory Management | 08 hours |
| Memory Management: - Memory Management function, Loading and linking Address Binding, Memory management techniques, Contiguous technique- Fixed Partitions, variable partitions, Memory Allocation: Allocation Strategies (First Fit, Best Fit, and Worst Fit), Non-contiguous, Paging, Segmentation, Segmented paging, Virtual Memory:- Virtual Memory Concepts, Demand Paging, Performance of Demand Paging, Page Replacement Algorithms: FIFO, LRU, Optimal and LFU, Belady’s Anomaly, Thrashing Applications: Virtual memory management in modern OS like Windows 10 and how paging impacts performance. | | |
| Unit 5 | File Management & Modern Operating System | 04 hours |
| File Management: - File Management: Access Mechanism, File Allocation Method, Free Space Management: -Bit Vector, Linked List, DISK: Disk Architecture, HDD vs SSD, Disk Scheduling Algorithms Modern Operating System: -Overview of modern operating system, Modern OS features: Multitasking, virtualization, security, scalability, Shared Memory concepts, Distributed system, Parallel system & its architecture, Virtual machines – hypervisor, Introduction to GPU Applications: Large File Storage in a Distributed Manner. | | |

| Course Contents / Syllabus | | | | | | | | | | | | | | | |
| Unit 1 | Introduction to Data Structure and Algorithms | | | | | | | | | | | | 10 hours | | |
| Algorithms, Analysing Algorithms, Complexity of Algorithms, Amortized Analysis, Growth of Functions, Methods of solving Recurrences, Performance Measurements, Time and Space Complexity of an algorithm, Asymptotic notations (Big Oh, Big Theta and Big Omega), Abstract Data Types (ADT). Data types: Primitive and non-primitive, Introduction to Data structure, Types of Data Structures- Linear & Non-Linear Data Structures. | | | | | | | | | | | | | | | |
| Unit 2 | Design and Analysis of Algorithms: Arrays, searching and sorting, Hashing | | | | | | | | | | | | 9 hours | | |
| Arrays: Definition, Single and Multidimensional Arrays, Representation of Arrays: Row Major Order, and Column Major Order, Derivation of Index Formulae for 1-D,2-D,3-D and n-D Array Application of Arrays: Sparse Matrices and their Representations. Searching algorithm with analysis: Linear search, Binary search. Sorting algorithm with analysis: Bubble sort, Insertion sort, Selection sort, Shell Sort, sorting in Linear Time- Counting Sort. Hashing: The symbol table, Hashing Functions, Collision-Resolution Techniques, Hashing for direct files. | | | | | | | | | | | | | | | |
| Unit 3 | Design and Analysis of Algorithms: Linked lists Data Structure | | | | | | | | | | | | 10 hours | | |
| Comparison of Array, List and Linked list Types of linked list: Singly Linked List, Doubly Linked List, Circular Linked List Polynomial Representation and Addition of Polynomials. | | | | | | | | | | | | | | | |
| Unit 4 | Design and Analysis of Algorithms: Stacks Data Structure, Recursion and Queue Data Structure | | | | | | | | | | | | 10 hours | | |
| Primitive Stack operations: Push & Pop, Array and Linked List Implementation of Stack, Application of stack: Infix, Prefix, Postfix Expressions and their mutual conversion, Evaluation of postfix expression. Principles of recursion, Tail recursion, Removal of recursion, Problem solving using iteration and recursion with examples such as binary search, Fibonacci series, and Tower of Hanoi, Trade-offs between iteration and recursion. Merge sort and Quick sort algorithms with analysis. Array and linked List implementation of queues, Operations on Queue: Create, Insert, Delete, Full and Empty, Circular queues, Dequeue | | | | | | | | | | | | | | | |

| | | | | | | | |
|--|--|-----|---------|---------|-----------------|-----|----------|
| and Priority Queue algorithms with analysis | | | | | | | |
| Unit 5 | Design and Analysis of Algorithms: Divide and Conquer Algorithm and Greedy Algorithms | | | | | | 9 hours |
| Divide and Conquer concepts with Examples Such as Quick sort, Merge sort. Greedy Methods with Examples Such as Activity Selection, Task Scheduling, Fractional Knapsack Problem, Huffman Encoding. | | | | | | | |
| Total Lecture Hours | | | | | | | 48 hours |

| Course Code: BCSAI0304 | Course Name: High Performance Computing | L | T | P | C |
| Course Offered in: CSE(DS), CSE(AI) , CSE(AIML) , CS | | 3 | 0 | 0 | 3 |

Pre-requisite: C Language

Course Objectives: This course introduces the fundamentals of High Performance Computing (HPC) and modern computing paradigms like cloud, grid, cluster, and quantum computing. It covers computing architectures, parallelism concepts, distributed memory models, and message-passing techniques. Students will also develop parallel applications using OpenMP and explore fault-tolerant mechanisms in cluster systems.

Course Outcome: After completion of the course, the student will be able to

| | | Bloom's Knowledge Level (KL) |
|------------|--|------------------------------|
| CO1 | Identify the need, applications of HPC and emerging paradigms. | K2 |
| CO2 | Analyze architectures and parallelism for HPC performance. | K4 |
| CO3 | Apply message passing for parallel algorithm design. | K3 |
| CO4 | Analyze fault tolerance in cluster computing. | K4 |
| CO5 | Implement shared memory programs using OpenMP. | K3 |

Course Contents / Syllabus

| | | |
|--|--------------------------------|-----------------|
| Module 1 | Introduction to HPC | 10 hours |
| Computational Thinking, Computing, Why High-Performance Computing, Applications of High-Performance Computing, Parallel programming Software Platforms and its significance, Cloud computing, Grid computing, Cluster computing and Quantum Computing, Multi-core CPUs, Graphical Processing Units. | | |
| Module 2 | Computing Architectures | 10 hours |
| SISD, SIMD, MISD, MIMD, Memory Hierarchy, Data parallelism, Task parallelism, Bit-level parallelism, Instruction-level parallelism, Concurrency, Decomposition, Mapping, PRAM, NUMA, Multithreading vs Multiprocessing, shared memory model, Open MP, distributed memory model, Message passing interface. Performance measures: Speedup, efficiency and scalability. | | |
| Module 3 | Distributed Memory | 10 hours |
| Distributed memory and Message passing networks, Broadcast, Reduction, Parallel Prefix Sum, Scatter, Gather, Network topologies for parallel computing, Network optimization. Distributed BFS, Graphs and adjacency matrix, Matrix based BFS, CUDA programming, Parallel matrix operations, Sparse vs Dense matrices. | | |
| Module 4 | Cluster Computing | 9 hours |
| BLAS, LAPAC, Cluster Computing, Clustering Models, Clustering Architectures, Clustering Architectures key factors, types of clusters, Mission critical Vs Business Critical Applications, Fault Detection and Masking Algorithms, Check pointing, Heartbeats, Watchdog Timers, Fault recovery through Failover and Failback Concepts. | | |
| Module 5 | OpenMP | 9 hours |
| OpenMP, Key concepts, Fork-join model, Goals of OpenMP, Supported platforms and compilers, OpenMP API components: directives, runtime routines, environment variables, General code structure, Core syntax and structured blocks, Compiling OpenMP programs, Parallel region construct, Creating and managing threads, Specifying the number of threads, Thread management and thread IDs, Applications of OpenMP. | | |
| Total Lecture Hours | | 48 hours |

Pre-requisite: Basic knowledge of computer fundamentals, C programming, Data structure and Computer organization.

Course Objectives: The course aims to provide hands-on experience with Linux and shell programming, while the lab focuses on implementing and analyzing key OS algorithms and simulating modern operating systems.

Course Outcome: After completion of the course, the student will be able to

| | | Bloom's Knowledge Level (KL) |
|------------|--|------------------------------|
| CO1 | Execute basic Linux commands and shell scripts to automate file management and system administration tasks. | K3 |
| CO2 | Implement and compare various CPU scheduling algorithms, process synchronization solutions using semaphores and deadlock handling algorithms. | K4 |
| CO3 | Simulate memory allocation techniques and page replacement algorithms, disk management strategies and explore modern OS features including virtualization and distributed computing. | K5 |

List Of Practical's (Indicative & Not Limited To)

| | |
|----------|--|
| 1 | Implementation of Linux Commands <ul style="list-style-type: none"> i. Introduction of Unix/Linux Operating system and their architecture ii. Display system information using uname, hostname, and date etc. iii. File operations using cat, touch, cp, mv, rm, and chmod ,umask etc. iv. Create, view, and navigate directories using mkdir, rmdir, cd, pwd, ls etc. v. Disk Commands df,du,mount,unmount,mkfs,fsck etc. vi. Use redirection and piping in commands vii. File compression and archiving using tar, gzip, zip, unzip etc. viii. Process commands ps,kill, killall,nice, pgrep, top,htop etc. ix. Network commands ifconfig, ping, netstat, host,ip route etc. x. Administrator Commands Adduser,Passwd, deluser, usermod, groupadd etc xi. Implement different types of system calls in Unix/Linux. |
| 2 | Shell Scripting Programming <ul style="list-style-type: none"> i. Write a shell script to ask your name, program name and enrollment number and print it on the screen. ii. Write a shell script to find the sum, the average and the product of the four integers entered. iii. write shell script to find average of numbers given at command line iv. Write a shell program to exchange the values of two variables v. Write a shell program to Print Numbers 1 to 10 using while & do while loop. vi. Write a shell program to Print Numbers 1 to 10 using for loop. vii. Write a shell script to display the digits which are in odd position in a given 5-digit number. viii. Write a shell program to search for a given number from the list of numbers provided using binary search method. ix. Write a shell program to concatenate two strings and find the length of the resultant string x. Write a shell script to find the smallest of three numbers xi. Write a shell program to count number of words, characters, white spaces and special symbols in a given text |
| | Process & Thread Management |
| 3 | Introduction to C Programming (Statement, Conditional Statement, Loop, Array & Function) |
| 4 | Implement FCFS CPU Scheduling algorithm. |
| 5 | Implement the SJF CPU Scheduling algorithm (For both Pre-emptive and Non-pre-emptive). |
| 6 | Implement PRIORITY CPU Scheduling Algorithm (For both Pre-emptive and Non-pre-emptive). |

| | |
|--|---|
| 7 | Implement Round-Robin CPU Scheduling Algorithm. |
| 8 | Implement Multi-Level Queue CPU Scheduling algorithm. |
| 9 | Implement Multilevel Feedback Queue CPU Scheduling Algorithm. |
| Concurrency and Deadlock Management | |
| 10 | Execute the RACE Condition of Process Synchronization. |
| 11 | Implement the Producer–consumer problem using semaphores. |
| 12 | Design a code and implement the Dinning Philosopher problem. |
| 13 | Implement Banker’s algorithm of Deadlock Avoidance. |
| 14 | Execute an algorithm for Deadlock Detection. |
| Memory Management | |
| 15 | Implement the Memory Fixed-size partition scheme. |
| 16 | Implement the Memory Variable-size partition scheme. |
| 17 | Simulate the First-Fit contiguous memory allocation technique. |
| 18 | Simulate the Best-Fit contiguous memory allocation technique. |
| 19 | Simulate the Worst-Fit contiguous memory allocation technique. |
| 20 | Implement the Non-contiguous Memory Allocation by using Paging. |
| Page Replacement | |
| 21 | Write a Program to simulate the FIFO page replacement algorithm. |
| 22 | Write a Program to simulate the LRU page replacement Algorithm. |
| 23 | Write a Program to simulate the Optimal page replacement Algorithm. |
| Disk Scheduling | |
| 24 | Write a program to simulate FCFS Disk Scheduling Algorithm. |
| 25 | Write a Program to simulate the SSTF Disk Scheduling Algorithm. |
| 26 | Write a program to simulate SCAN Disk Scheduling Algorithm. |
| 27 | Write a Program to simulate the C SCAN Disk Scheduling Algorithm. |
| 28 | Write a Program to simulate the LOOK Disk Scheduling Algorithm. |
| 29 | Simulate all file allocation strategies a) Sequential b) Indexed c) Linked. |
| Modern Operating System | |
| 30 | Introduction of CUDA Programming. |
| 31 | Write a program in CUDA print message “Welcome CUDA programming” |
| 32 | Implement matrix multiplication using shared memory in CUDA. |
| 33 | Connects to VMware vCenter and lists all virtual machines along with their power state. |
| 34 | Create a new virtual machine in Azure with specified configurations. |
| 35 | Deploy a simple HTTP-triggered distributed Azure Function. |
| | Total Hours: 48 hrs. |

Pre-requisite: The concept of Programming Language

Course Objective:

The objective of the course is to compare the time complexities of various algorithm and implementation of linear data structure.

Course Outcome: After completion of the course, the student will be able to:

| | | Bloom's Knowledge Level (KL) |
|------------|--|------------------------------|
| CO1 | Implement array and matrix operations along with searching and sorting algorithms to solve computational problems. | K3 |
| CO2 | Implement Link list, Stack and Queues with their applications. | K3 |
| CO3 | Implement divide and conquer and greedy algorithms to solve problems like sorting, scheduling and optimization. | K3 |

CO-PO Mapping (Scale 1: Low, 2: Medium, 3: High)

| CO-PO Mapping | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PSO1 | PSO2 |
|---------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|------|
| CO1 | 3 | 3 | 2 | 3 | 3 | 1 | 1 | 1 | 1 | 1 | 2 | 3 | 1 |
| CO2 | 3 | 3 | 3 | 2 | 3 | 1 | 1 | 1 | 1 | 1 | 2 | 3 | 1 |
| CO3 | 3 | 3 | 3 | 3 | 3 | 1 | 1 | 1 | 1 | 1 | 3 | 3 | 1 |

List of Practical (Indicative & Not Limited To)

- Construct a program to compare the time complexities of selection, bubble and insertion sort by plotting the graph.
- Construct a program to compare the time complexities of various algorithms by varying size "n".
- Construct a program to find the maximum element in an array.
- Construct a program to calculate the sum of all elements in an array.
- Construct a program to reverse the elements of an array.
- Construct a program to check if an array is sorted in ascending order.
- Construct a program to count the occurrence of a specific element in an array.
- Construct a program for creation and traversal of 2D Array in row major and column major order.
- Construct a program to print the transpose of a given matrix using function.
- Construct a program to find if a given matrix is Sparse or Not and print Sparse Matrix.
- Construct a program to represent a sparse matrix in triplet form.
- Construct a program to implement Linear Search.
- Construct a program to implement Binary Search.
- Construct a program to implement Selection Sort.
- Construct a program to implement Bubble Sort.
- Construct a program to implement Insertion Sort.

| | | |
|--|------------------------------------|----------|
| 17. Construct a program to implement Shell Sort. | | |
| 18. Construct a program to implement Counting Sort. | | |
| 19. Construct a program to create a single linked list and perform basic operations (insertion, deletion, traversal). | | |
| 20. Construct a program to create a double linked list and perform basic operations (insertion, deletion, traversal). | | |
| 21. Construct a program to create a circular linked list and perform basic operations (insertion, deletion, traversal). | | |
| 22. Construct a program to create a circular double linked list and perform basic operations (insertion, deletion, traversal). | | |
| 23. Construct a program to reverse a single linked list. | | |
| 24. Construct a program to check if a linked list is palindrome. | | |
| 25. Construct a program to reverse a double linked list. | | |
| 26. Construct a program to find the middle element of a single linked list. | | |
| 27. Construct a program to find the middle element of a double linked list. | | |
| 28. Construct a program to merge two sorted single linked lists. | | |
| 29. Construct a program to detect and remove a loop in a circular linked list. | | |
| 30. Construct a program to add two polynomials using linked list. | | |
| 31. Construct a program to implement stack using array. | | |
| 32. Construct a program to implement stack using a linked list. | | |
| 33. Construct a program to infix to postfix conversion using a stack. | | |
| 34. Construct a program for balanced parentheses checker using a stack. | | |
| 35. Construct a program to reverse a string using a stack. | | |
| 36. Construct a program to implement Binary search using recursion. | | |
| 37. Construct a program to print Fibonacci series using recursion. | | |
| 38. Construct a program to implement Tower of Hanoi. | | |
| 39. Construct a program to implement queue using array. | | |
| 40. Construct a program for implementing a circular queue. | | |
| 41. Construct a program to implement queue using stack. | | |
| 42. Construct a program to implement priority queue. | | |
| 43. Construct a program to implement double ended queue. | | |
| 44. Construct a program to implement Merge Sort with recursion. | | |
| 45. Construct a program to implement Quick Sort with recursion. | | |
| 46. Construct a program to implement Merge Sort using iteration. | | |
| 47. Construct a program to implement Quick Sort using iteration. | | |
| 48. Construct a program to implement fractional knapsack. | | |
| 49. Construct a program to implement Activity selection problem. | | |
| 50. Construct a program to implement Job scheduling problem. | | |

| List Of Practical's (Indicative & Not Limited To) | | | | | | | | | | | | | |

| Sr. No | Program Title | CO Mapping |
|---------------|---|-------------------|
| 1 | Implement Breadth First Search and Depth First Search algorithm. | CO1 |
| 2 | Implement Best first search Algorithm on given heuristic value in a Graph and find out goal. | CO1 |
| 3 | Implement A* search Algorithm on given heuristic value in a Graph and find out goal. | CO1 |
| 4 | Solve Tic-toc-toe game problem using Min-Max algorithm for any given state. | CO1 |
| 5 | Develop a program that solves the knapsack problem, where items of different weights and values need to be packed into a knapsack with a maximum weight capacity, maximizing the total value. | CO1 |
| 6 | Implement Principal Component Analysis (PCA) algorithm. | CO2 |
| 7 | Fit a linear regression model to predict housing prices based on the size of the house. | CO2 |
| 8 | Implementing a class having functions for Mean Absolute Error, Root Mean Square Error, Log loss, R-square and Adjusted R Square. | CO2 |
| 9 | Implement Gradient Descent algorithm and analyze the effect of learning rate and derivatives. | CO2 |
| 10 | Perform multiple linear regression to predict a student's test score based on hours studied, number of assignments completed, and previous test scores. | CO2 |
| 11 | Apply polynomial regression to predict stock prices based on historical data. | CO2 |
| 12 | Implement K-Nearest Neighbor regression from scratch to predict housing prices based on the size of the house. Analyze the effect of value of K on error functions. | CO2 |
| 13 | Understand Under fitting and Over fitting in already implemented regression algorithms, Hyper- | CO2 |

| | | |
|----|--|-----|
| | parameter tuning. | |
| 14 | Implementation of regularized linear regression: Lasso and Ridge regression. | CO2 |
| 15 | Logistic regression for multiclass classification. | CO2 |
| 16 | Implement K-Nearest Neighbor regression from scratch for classification. | CO2 |
| 17 | Use the ID3 algorithm to build a decision tree to predict whether a customer will purchase a product based on their browsing behavior on an e-commerce website. | CO2 |
| 18 | Use a support vector machine (SVM) to classify images into different categories using the CIFAR-10 dataset. | CO2 |
| 19 | Comparative study of KNN, Decision Tree, SVM and Bayesian Learning on a common dataset in form of classification report. | CO2 |
| 20 | Introduction to Clustering: Load a dataset and visualize it using scatter plots. Apply K-means clustering algorithm to the dataset and visualize the clusters. | CO2 |
| 21 | K-means Clustering: Generate a synthetic dataset using make_blobs from sklearn datasets. Implement K-means clustering algorithm to cluster the dataset. Visualize the resulting clusters using scatter plots. | CO2 |
| 22 | Hierarchical Clustering (AGNES - Agglomerative Nesting): Generate a synthetic dataset using make_blobs from sklearn.datasets. Apply the AGNES hierarchical clustering algorithm to the dataset. Visualize the resulting dendrogram. | CO2 |
| 23 | Hierarchical Clustering: DIANA (Divisive Analysis): Load a dataset and pre-process it if necessary. Implement DIANA hierarchical clustering algorithm. Visualize the resulting dendrogram. | CO2 |
| 24 | Density-based Clustering: Generate a synthetic dataset using make_moons or make_circles from sklearn.datasets. Apply DBSCAN algorithm to the dataset. Visualize the resulting clusters. | CO2 |
| 25 | Clustering Evaluation: Load a dataset and apply a clustering algorithm of your choice. Evaluate the quality of the clustering using metrics like silhouette coefficient or adjusted Rand index. | CO2 |
| 26 | Clustering on Image Data: Load an image dataset (e.g., MNIST digits) and pre-process the images. Apply a clustering algorithm (e.g., K-means) to cluster the images based on their features. Visualize the clusters and analyze the results. | CO2 |
| 27 | Implement Bayesian classifier from scratch. | CO3 |
| 28 | Bayesian Learning: Implement Bayesian learning using SKlearn library on a public dataset. Evaluate the performance of the classifier on the testing set. | CO3 |
| 29 | "Bagging and Boosting: Implement a bagging ensemble using sklearn.ensemble. BaggingClassifier. Implement a boosting ensemble using sklearn.ensemble. AdaBoostClassifier. Compare the performance of the two ensemble methods on the testing data." | CO3 |
| 30 | Random Forest: Implement a random forest classifier using sklearn.ensemble. RandomForestClassifier. Tune the hyperparameters of the random forest using cross-validation. | CO3 |

| | | |

| Course Code: BCSE0352 | Course Name: Object Oriented Techniques using Java | L | T | P | C |
| Course Offered in: CSE/CS/IT/CSE(AI)/CSE(AIML)/CSE(IOT)/CSE(AI)/CSE(DS)/CSE-R/M.Tech int | | 0 | 0 | 6 | 3 |

Pre-requisite:

1. Basic Programming Knowledge
2. Knowledge of any programming language (e.g., C, C++, Python)

Course Objectives:

The objective of this course is to understand the object-oriented methodology, and its techniques to design stand alone and GUI applications using hands-on engaging activities.

Course Outcome: After completion of the course, the student will be able to

| S.No | Course Outcome | Bloom's Level |
|------|---|---------------|
| CO1 | Understand the concepts of object-oriented programming and relationships among them needed in modeling. | K2 |
| CO2 | Demonstrate the Java programs using OOP principles and also implement the concepts of lambda expressions. | K3 |
| CO3 | Analyze packages with different protection level resolving namespace collision and implement the error handling concepts for uninterrupted execution of Java program. | K4 |
| CO4 | Implement Concurrency control, I/O Streams and Java Socket Programming Concepts. | K3 |
| CO5 | Design and develop the GUI based application, Generics and Collections in Java programming language to solve the real-world problem. | K6 |

Course Contents / Syllabus

| | | |
|---------------|-----------------------------------|-----------------|
| Unit 1 | Basics of Java Programming | 16 hours |
|---------------|-----------------------------------|-----------------|

Object Oriented Programming: Introduction and Pillars of OOP with real life example, jvm architecture and its components

Modelling Concepts: Introduction, Class Diagram and Object Diagram, UML concepts: Association, Composition, aggregation, realization, and Generalization.

Control Statements: Decision Making, Looping and Branching, Argument Passing Mechanism: Command Line Argument, Console Input.

Class and Object: Object Reference, Constructor, Abstraction: Abstract Class, Interface and its uses, Defining Methods, Use of “this” and “super” keyword, Garbage Collection and finalize () Method etc.

| | | |
|---------------|---|-----------------|
| Unit 2 | OOPs features, arrays and lambda expressions | 16 hours |
|---------------|---|-----------------|

Inheritance: Introduction and Types of Inheritance in Java, Access Modifiers, Constructors and super constructor in Inheritance.

Polymorphism: Introduction and Types, Overloading and Overriding.

Lambda expression: Introduction and Working with Lambda Variables.

Arrays: Introduction and its Types. Jagged Array with example

| | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
|---|---|----------|----------|----------|----------|-----|-----|-----------------|--|--|--|--|-----|--|-----|-----|-----|----------|----------|----------|-----------------|----|--|--|----|--|--|--|-----|--|
| Unit 3 | Packages, Exception Handling and String Handling | 16 hours | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Packages: Introduction and Types, Access Protection in Packages, Import and Execution of Packages. Exception Handling, Assertions and Localizations: Introduction and Types, Exceptions vs. Errors, Handling of Exception. Finally, Throws and Throw keyword, Multiple Catch Block, Nested Try and Finally Block, Customized Exceptions, Tokenizer. Assertions and Localizations Concepts and its working. String Handling: Introduction and Types, Operations, Immutable String, Method of String class, String Buffer and String Builder class. | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Unit 4 | Concurrency in Java and I/O Stream | 16 hours | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Threads: Introduction and Types, Creating Threads, Thread Life-Cycle, Thread Priorities, Daemon Thread, Runnable Class, Synchronizing Threads etc. I/O Stream: Introduction and Types, Common I/O Stream Operations, Interaction with I/O Streams Classes. character and byte oriented stream classes with example Java Socket Programming: Introduction and types(TCP, UDP), java socket program with server-side and client-side by using connection. | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Unit 5 | GUI Programming, Generics and Collections | 16 hours | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| GUI Programming: Introduction and Types, Swing, AWT, Components and Containers, Layout Managers and User-Defined Layout and Event Handling. Generics: Introduction to Generic Classes, types of generic defined in brief, bounded type parameter(Upper and Lower bound), Initializing a Generic Object, Classes, Methods and Interfaces Use enumerated type. Collections: Introduction, main interfaces of collections(Collection, List Set, Map, Queue), classes of collections(ArrayList, Linked list, HashSet, HashMap and TreeSet) and methods(List, Set Map) Collection using Iterators | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |

| List Of Practical’s (Indicative & Not Limited To) | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| 1.Understanding Text Editors to Write Programs Compile and run first java file Byte Code and class file | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| 2. Sketch a class and object diagram describing the sales order system of restaurant | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| 3. Sketch a class diagram describing the circle and rectangle class | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| 4. Sketch a class diagram for a college platform including, classroom, playground, chair, table, smart board, teaching staff etc. | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| 5. Sketch a class diagram containing class called Employee, which models an employee with an ID, name and salary. Add method | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |

| |
|--|
| raiseSalary(percent) that increases the salary by the given percentage. |
| 6.Program to display default value of all Primitive data types |
| <p>7. Implement the code using main() method to calculate and print the Total and Average marks scored by a student from the input given through the command line arguments.</p> <p>Assume that four command line arguments name, marks1, marks2, marks3 will be passed to the main()</p> <p>method in the below class with name TotalAndAvgMarks.</p> |
| 8.Write code which uses if-then-else statement to check if a given account balance is greater or lesser than the minimum balance. Write a class BalanceCheck with public method checkBalance that takes one parameter balance of type double. Use if-then-else statement and print Balance is low if balance is less than 1000. Otherwise, print Sufficient balance. |
| <p>9. A class NumberPalindrome with a public method isNumberPalindrome that takes one parameter number of type int. Write a code to check whether the given number is palindrome or not.</p> <p>For example Cmd Args : 333</p> <p>333 is a palindrome</p> |
| 10. Write a class FibonacciSeries with a main method. The method receives one command line argument. Write a program to display fibonacci series i.e. 0 1 1 2 3 5 8 13 21 |
| 11. Write a Java Program to find the Factorial of a given number. |
| 12. Java Program to create a class, methods and invoke them inside main method. |
| <p>13. Write a Java program to illustrate the abstract class concept. Create an abstract class Shape, which contains an empty method numberOfSides().</p> <p>Define three classes named Trapezoid, Triangle and Hexagon extends the class Shape, such that each one of the classes contains only the method numberOfSides(), that contains the number of sides in the given geometrical figure. Write a class AbstractExample with the main() method, declare an object to the class Shape, create instances of each class and call numberOfSides() methods of each class.</p> |
| 14. Java program to illustrate the static field in the class. |
| 15. Java Program to illustrate static class. |
| 16. Write a java program to access the class members using super keyword |
| 17. Java program to access the class members using this keyword |
| <p>18. Implement an interface named MountainParts that has a constant named TERRAIN that will store the String value “off_road”. The interface will define two methods that accept a String argument name newValue and two that will return the current value of an instance field. The methods are to be named: getSuspension,</p> <p>setSuspension, getType , setType.</p> |
| 19.Java program to demonstrate nested interface inside a interface. |
| 20.Java program to demonstrate nested interface inside a class. |
| 21.Java program to explicit implementation of garbage collection by using finalize() method |
| 22.Java program to implement Single Inheritance |
| 23.Java program to implement multi- level Inheritance |
| 24.Java program to implement constructor and constructor overloading. |
| 25.Java program implement method overloading. |
| 26.Java program to implement method overriding. |
| 27.Java program to implement lambda expression without parameter. |
| 28.Java program to implement lambda expression with single parameter. |

| |
|--|
| 29.Java program to implement lambda expression with multi parameter. |
| 30. Java program to implement lambda expression that iterate list of objects |
| 31.Java program to define lambda expressions as method parameters |
| 32.Write a class CountOfTwoNumbers with a public method compareCountOf that takes three parameters one is arr of type int[] and other two are arg1 and arg2 are of type int and returns true if count of arg1 is greater than arg2 in arr. The return type of compareCountOf should be boolean. Assumptions: <ul style="list-style-type: none"> • arr is never null • arg1 and arg2 may be same |
| 33.Java program to show the multiplication of two matrices using arrays. |
| 34.Java Program to search an element using Linear Search |
| 35.Java program to search an element using Binary Search |
| 36.Java Program to sort element using Insertion Sort |
| 37.Java Program to sort element using Selection Sort– Largest element Method |
| 38.Java program to Sort elements using Bubble Sort |
| 39.Java program to create user defined package. |
| 40.Java Program to create a sub- classing of package |
| 41.Implement the following: <ol style="list-style-type: none"> 1. Import package.*; 2. import package.classname; 51. Using fully qualified name. |
| 42.Implement and demonstrate package names collision in java |
| 43.Java program to handle and Arithmetic Exception Divided by zero |
| 44.Java Program to implement User Defined Exception in Java |
| 45.Java program to illustrate finally block |
| 46.Java program to illustrate Multiple catch blocks |
| 47.Java program for creation of illustrating throw in exception handling. |
| 48.Implement the concept of Assertion in Java Programming Language |
| 49.Implement the concept of Localization in Java Programming Language. |
| 50.Java program to print the output by appending all the capital letters in the input string. |
| 51.Java program that prints the duplicate characters from the string with its count. |
| 52.Java program to check if two strings are anagrams of each other |
| 53.Java Program to count the total number of characters in a string |
| 54.Java Program to count the total number of punctuation characters exists in a String |
| 55.Java Program to count the total number of vowels and consonants in a string |
| 56.Java Program to show .equals method and == in java |
| 57.Given a string, return a new string made of n copies of the first 2 chars of the original string where n is the length of the string. The |

| |
|---|
| string may be any length. If there are fewer than 2 chars, use whatever is there. If input is "Wipped" then output should be "WiWiWiWiWi". |
| 58.Given two strings, a and b, create a bigger string made of the first char of a, the first char of b, the second char of a, the second char of b, and so on. Any leftover chars go at the end of the result. If the inputs are "Hello" and "World", then the output is "HWeolrlld". |
| 59.Java program to show the usage of string builder. |
| 60.Java program to show the usage of string buffer. |
| 61.Creating and Running a Thread |
| 62.Implementing Runnable Interface |
| 63.Synchronizing Threads with lock |
| 64.Synchronizing Threads without lock |
| 65.Java program to implement even and odd threads by using Thread class . |
| 66.Java program to implement even and odd threads by using Runnable interface. |
| 67.Java program to synchronize the threads by using Synchronize statements and Synchronize block. |
| 68.Write a program where the client sends a message to the server, and the server prints it by using TCP |
| 69.Implement a server that can handle multiple clients simultaneously using UDP |
| 70.Write a client-server application where the client uploads a file and the server saves it by using TCP/UDP. |
| 71. Java program to implement that read a character stream from input file and print it into output file. |
| 72.Java program to implement that merge the content of two files (file1.txt, file2.txt) into file3.txt. |
| 73.Write a Java program that reads the contents of one file and copies them to another file. |
| 74.Write a Java program that reads a text file and counts the number of words in it. |
| 75.Write a Java program that reads a text file and counts the frequency of each word in it. |
| 76.Write a Java program that reads a text file and adds line numbers to each line. The program should create a new file with the line numbers added to the beginning of each line. |
| 77.Write a Java program that reads two binary files and compares them byte by byte to determine if they are identical. Display a message indicating whether the files are the same or different. |
| 78.Program to create a frame with three button in AWT and swing |
| 79.Program to display message with radio buttons in swing |
| 80.Program to display "All The Best" in 5 different colors on screen. (Using AWT/Swing) |
| 81.Program to implement handling in a button "OK" |
| 82.Java Program to implement BorderLayout |
| 83.Java Program to implement GridLayout |
| 84. Java Program to implement BoxLayout |
| 85. Java Program to implement CardLayout |

| |
|---|
| 86. Java program to implement Generic class |
| 87. Java program to illustrate Generic methods |
| 88. Java program to implement wildcard in generics |
| 89. Java program to implement methods of HashSet |
| 90. Java Program to implement methods available in HashMap class |
| 91. Program to add, retrieve, and remove element from ArrayList |
| 92. Create a method which can accept a collection of country names and add it to ArrayList with generic defined as String and return the List. |
| 93. Create a method which can create a HashSet containing values 1-10. The Set should be declared with the generic type Integer. The method should return the Set. |
| 94. Java program to implement autoboxing |
| 95. Java program to implement unboxing |
| 96. Develop a java class with a method storeEvenNumbers(int N) using ArrayList to store even numbers from 2 to N, where N is an integer which is passed as a parameter to the method storeEvenNumbers(). The method should return the ArrayList (A1) created. |
| 97. Create a method that accepts the names of five countries and loads them to an array list and returns the list. |
| 98. Create a method which can accept a collection of country names and add it to ArrayList with generic defined as String and return the List. |

| | | | | | | | | | | | | | | |

| Course Contents / Syllabus | | | | | | | | | | | | | | |
| Module 1 | | Basic Principle of Ecology and Biodiversity | | | | | | | | | | 4 hours | | |
| Definition, Scope and basic principles of ecology and environment. Ecosystem: Basic concepts, components of ecosystem. Food chains and food. Webs. Ecological pyramids, Energy flow in ecological systems, Characteristics of different ecosystems. Biogeochemical Cycles: Importance, gaseous and sedimentary cycles. Carbon, Nitrogen, Phosphorus and Sulphur Cycles. Biodiversity and their importance, Threats to biodiversity, major causes, extinction's, vulnerability of species to extinction, IUCN threat categories, Red data book. Strategies for biodiversity conservation, principles of biodiversity conservation in-situ and ex-situ conservation strategies Mega diversity zones and Hot spots, concepts, distribution and importance. | | | | | | | | | | | | | | |
| Module 2 | | Natural Resources and Ecological succession | | | | | | | | | | 4 hours | | |
| Natural resources and associated problems. Forest resources: Use and over- exploitation, deforestation. Timber extraction, mining, dams and their effects on forest and tribal people. Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources. Food resources: World food problems, changes caused by agriculture and over- grazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, and salinity. Land resources: Land as a resource, land degradation, man induced landslides. Equitable use of resources for sustainable lifestyles. | | | | | | | | | | | | | | |
| Non-Renewable Energy Resources: Fossil fuels and their reserves, Nuclear energy, types, uses and effects, Renewable Energy Resources: hydropower, Solar energy, geothermal, tidal and wind energy, Biomass energy, biogas and its advantages. Ecological succession-Types, stages, examples of ecological succession | | | | | | | | | | | | | | |
| Module 3 | | Pollution and Waste Management | | | | | | | | | | 4 hours | | |
| Air pollution: sources of air pollution, Primary and secondary air pollutants. Origin and effects of SOX, NOX, CO, CFC, Hydrocarbon, control of air pollution. Water pollution: sources and types of water pollution, Effects of water pollution, Eutrophication, Soil pollution: Causes of soil pollution, Effects of soil pollution, Major sources of and effects of noise pollution on health, Radioactive and thermal pollution sources and their effects on surrounding environment. Solid waste disposal and its | | | | | | | | | | | | | | |

effects on surrounding environment, Introduction to E- Waste, Types and classification of E- Waste, Impacts of E- Waste on environment and human health, E-Waste management and recycling., Climate change, global warming, acid rain, ozone layer depletion.

| | | |
|-----------------|---|----------------|
| Module 4 | Environmental Assessment and Legislation | 4 hours |
|-----------------|---|----------------|

Women education, Role of NGOs regarding environmental protection, Bio indicators and their role, Natural disasters and disasters management, Aims and objectives of Environmental Impact Assessment (EIA). Salient features of following Acts: Environmental Protection Act, 1986, Wildlife (Protection) Act, 1972. Water (Prevention and control of pollution) Act, 1974. Forest (Conserving) Act, 1980.

Definition and concept of sustainability, impacted areas of sustainable development, Global initiative and issues on sustainable development UNSDsGs, System Thinking and Sustainability.

| Course Code: BASCC0401 | Course Name: Employability Skill Development – II | | | | | | | | | | L | T | P | C |
| Course Offered in: | | | | | | | | | | | 2 | 0 | 0 | 2 |
| Pre-requisite: Basic understanding of elementary mathematics | | | | | | | | | | | | | | |
| Course Objectives: The objective of this course is to develop students' quantitative aptitude and logical reasoning skills through number theory, analytical puzzles, and business mathematics, enabling them to solve real-world and competitive exam problems with speed, accuracy, and logical thinking. | | | | | | | | | | | | | | |
| Course Outcome: After completion of the course, the student will be able to | | | | | | | | | | | | Bloom’s Knowledge Level (KL) | | |
| CO1 | Apply fundamental number theory concepts such as divisibility, HCF & LCM, remainder theorem, and cyclicity to solve quantitative problems efficiently. | | | | | | | | | | | | K2, K3 | |
| CO2 | Solve problems involving logical reasoning and analytical thinking, including direction sense, blood relations, series patterns, and time-based puzzles like clocks and calendars. | | | | | | | | | | | | K3 | |
| CO3 | Solve real-life business math problems involving percentages, profit and loss, discounts, interest average calculations and using appropriate mathematical methods | | | | | | | | | | | | K2, K3 | |
| CO4 | Solve real-life business math problems involving averages, mixtures, and ratios using appropriate mathematical methods | | | | | | | | | | | | K2, K3 | |
| CO-PO Mapping (Scale 1: Low, 2: Medium, 3: High) | | | | | | | | | | | | | | |

| Course Contents / Syllabus | | | | | | | | | | | | |
| Module 1 | | | Introduction about the Database Conceptual Designing | | | | | | | | 8 hours | |
| Basic Concept: Database system concept, architecture, History of Database, Data Independence, Database system Vs File system, Data models & Types of Data Models, schema and instances. | | | | | | | | | | | | |
| Data Modelling using the Entity Relationship Model: ER model concepts, Degree of relationship, Notation for ER diagram, mapping constraints, Generalization, Aggregation, Reduction of an ER diagrams to tables. Extended ER Diagram & reduction of EER. Codd Rules. | | | | | | | | | | | | |
| Introduction on SQL: Types of SQL commands: -DDL, DML, DCL, TCL. Basic of Relation Algebra & | | | | | | | | | | | | |

| | | |
|---|---|---------|
| Operations, Query Optimization. | | |
| Module 2 | Basic of SQL & Normalization | 8 hours |
| Keys & Types of Keys: Super key, Candidate Key, Primary Key, Alternative Key, Foreign Key, unique. Constraints and Types of Constraints. Use of Functions, Clause and Predicates: Aggregate Function, Scalar Functions, Where, Group by, Having and Order by, SQL Operators. Like, Between, Aliases, distinct, limit. Normalization: Functional Dependencies, attribute Closure, Normalization & Types of Normalization, Candidate Key, Canonical Cover of FD's. | | |
| Module 3 | Introduction of Complex Queries | 8 hours |
| Use of Operators: Union, Intersect, Minus, Cartesian Product, join:-Inner Join: - Natural Join, Equi Join & Non Equi Join Outer Join: Left Outer Join, Right Outer Join and Full Outer Join, Division Operator. Nested Query or Sub Query: IN, NOT IN, Exists, Not Exists, All and Any. Managing Indexes, Synonyms and Sequences, Managing Views. Introduction of PL/SQL: Implementation of PL/SQL Function, Procedure, Trigger, Cursor. Database connectivity: Database Connectivity with Java/Python Programming Languages. | | |
| Module 4 | Transaction and Concurrency Control | 8 hours |
| Transaction system: Life cycle of transaction, ACID Properties Schedule & Types of Schedule, Serializability, Recoverability, Deadlock Handling. Concurrency Control Techniques: Concurrency Control, Concurrency control Techniques: Locking Techniques, Timestamping, Validation Based Protocol, Transaction & Data Control: -Grant, Revoke, commit & Rollback. | | |
| Module 5 | Introduction of NoSQL With MongoDB | 8 hours |
| Introduction of NoSQL With MongoDB : Introduction of NoSQL Data Models, Overview of NoSQL Databases with their Types, Uses & Features of NoSQL Document Databases, CAP theorem, BASE Vs ACID, Comparison of relational databases to NoSQL stores, uses and deployment; - MongoDB, Cassandra, HBASE, Neo4j and Riak. Introduction and Features of MongoDB, MongoDB Operators, MongoDB Collection & Document, MongoDB Shell & their commands, CRUD operations. Cloud Database Introduction of Cloud Database. MongoDB Cloud product : Stitch, Atlas & Cloud Manager. | | |
| Total Lecture Hours | | 40 |

| Course Contents / Syllabus | | | | | | | | | | | | | | | |
| Unit 1 | | | | Design and Analysis of Algorithms: Tree | | | | | | | | | | 8 hours | |
| Trees: Terminology used with Trees, Binary Tree, Memory representation of Tree, Traversal Algorithms: In-order, Pre-order, and post-order. Constructing Binary Tree from given Tree Traversal, Operation of Insertion, Deletion, Searching & Modification of data in Binary Search tree, Binary Heaps, Threaded Binary trees, Traversing Threaded Binary trees, AVL Tree. | | | | | | | | | | | | | | | |
| Application of Trees: Priority Queue, Heap Sort, Huffman codes. | | | | | | | | | | | | | | | |
| Unit 2 | | | | Design and Analysis of Algorithms: Graphs | | | | | | | | | | 8 hours | |
| Graphs: Terminology used with Graph, Data Structure for Graph Representations: Adjacency matrices, Adjacency List. | | | | | | | | | | | | | | | |
| Graph Traversal: Depth First Search and Breadth First Search. Connected Component, Spanning Trees. | | | | | | | | | | | | | | | |
| Algorithms on Graphs: Minimum Cost Spanning | | | | | | | | | | | | | | | |
| Trees: Prim's and Kruskal's algorithm. Directed- Acyclic Graph, Transitive Closure and Shortest Path | | | | | | | | | | | | | | | |

| | | | | | | | |
|--|--|-----|--------------------------------|----------|------------------|-----|----------|
| algorithms: Dijkstra Algorithm, Bellman Ford Algorithm, Floyd Warshall’s Algorithm. | | | | | | | |
| Unit 3 | | | Dynamic Programming | | | | 8 hours |
| Dynamic Programming: Dynamic Programming concepts 0/1 Knapsack, Longest Common Sub Sequence, Matrix Chain Multiplication, Resource Allocation Problem. | | | | | | | |
| Unit 4 | | | Backtracking, Branch and Bound | | | | 8 hours |
| Backtracking: Backtracking, Branch, and Bound with Examples Such as Travelling Salesman Problem, Graph Colouring, n-Queen Problem, Hamiltonian Cycles, and Sum of Subsets. | | | | | | | |
| Unit 5 | | | Advanced- Data Structures | | | | 8 hours |
| Red-Black Trees, B – Trees, B+ Trees, Binomial Heaps, Fibonacci Heaps, Trees. | | | | | | | |
| Total Lecture Hours | | | | | | | 40 hours |

| Course Offered in: CSE/IT/IT/CSE(Twin)/IT(Twin)/CSE(Prof)/IT(Prof)/M&C/AI/AI(TWIN)/AIML/AI ML(TWIN) | | | | | | | | | | 3 | 0 | 0 | 3 |
| Pre-requisite: Mathematical Foundations, Fundamental of Computer System | | | | | | | | | | | | | |
| Course Objectives: The primary objective of this course is to provide a foundational understanding of Automata Theory and its role in the language processing systems, also explores their application in fields like Natural Language Processing (NLP), speech recognition. | | | | | | | | | | | | | |
| Course Outcome: After completion of the course, the student will be able to | | | | | | | | | | | | Bloom's Knowledge Level (KL) | |
| CO1 | | Identify the fundamental concepts of automata theory, formal languages and compiler components. | | | | | | | | | | K2 | |
| CO2 | | Understand the role of finite automata, regular expressions, and grammar rules in language processing. | | | | | | | | | | K2 | |
| CO3 | | Demonstrate context-free grammars, pushdown automata, and syntax-directed translation to construct intermediate code for language processors. | | | | | | | | | | K3 | |
| CO4 | | Analyze various parsing strategies, code translation methods, and intermediate representations in compiler phases. | | | | | | | | | | K4 | |
| CO5 | | Analyze the functioning of Turing machine models and optimization techniques in code generation for performance improvement. | | | | | | | | | | K4 | |
| CO-PO Mapping (Scale 1: Low, 2: Medium, 3: High) | | | | | | | | | | | | | |
| CO-PO Mapping | | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | |
| CO1 | | 3 | 2 | 2 | 2 | - | - | - | - | - | - | 2 | |
| CO2 | | 3 | 3 | 3 | 2 | 1 | - | - | - | - | - | 2 | |
| CO3 | | 3 | 3 | 3 | 3 | 1 | - | - | - | - | - | 2 | |
| CO4 | | 3 | 3 | 3 | 3 | 1 | - | - | - | - | - | 2 | |
| CO5 | | 3 | 3 | 3 | 3 | 1 | - | - | - | - | - | 2 | |
| Course Contents / Syllabus | | | | | | | | | | | | | |
| Module 1 | | | | | Introduction to Finite Automata and Compiler | | | | | | | 10 hours | |
| Introduction: Role of Automata and Formal languages, Alphabet, String, Grammar, Language, Chomsky Hierarchy of languages. | | | | | | | | | | | | | |
| Introduction to Finite State Machine: Deterministic Finite Automaton (DFA) and Non-Deterministic Finite Automaton (NFA), NFA with ϵ -Transition, Equivalence of NFA and DFA, | | | | | | | | | | | | | |
| Introduction to Compiler: Translators, Language Processing System, Phases and passes of compilation | | | | | | | | | | | | | |

| | | |
|---|---|----------|
| Use Case 1 : Role of Finite Automata in NLP and Speech Recognition. | | |
| Module 2 | Regular Expression and Tokenization | 9 hours |
| Regular Expression: Regular Expression, Regular Sets, Properties of Regular Expression, Finite Automata and Regular Expression, Arden’s Theorem, Regular Grammars-Right Linear and Left Linear grammars. Lexical Analyzer: Role of lexical Analyzer, Specifications and Recognition of tokens, Lex, | | |
| Module 3 | Context free grammar and Push Down Automata | 09 hours |
| Context Free Grammar (CFG): Definition and Language, Derivations, Parse Trees and Ambiguity, Simplification of CFG, Push Down Automata: Definition of the Pushdown Automata, Languages of PDA | | |
| Module 4 | Parser and Intermediate Representation | 10 hours |
| Parser: Role of parser, Top down Parsing-LL (1) parser, Bottom up parsing- shift reduce parser and LR (0), SLR parser, Introduction to Syntax directed Translation, Intermediate-Code Generation: Three-Address Code- Quadruples, Triples, Indirect triples Use Case-2: Role of CFG and parsing in Voice Assistant | | |
| Module 5 | Turing machine and Optimization | 10 hours |
| Turing Machine: Basic Concept of Turing Machine, Variants of Turing Machine, Universal Turing Machine Code optimization and generation: Basic Block, Flow graph, DAG, Optimization Techniques | | |
| Total Lecture Hours | | 48 hours |

| Course Code: BASL0401N | Course Name: Technical Communication | L | T | P | C |
| Course Offered in: B. Tech. All branches (except CSBS) | | 2 | 0 | 0 | 2 |

Pre-requisite: Intermediate level (CEFR) and above

Course Objectives:

1. **Demonstrate effective verbal and non-verbal communication skills** in diverse professional settings, including meetings, presentations, and interpersonal interactions.
2. **Develop and apply clear, concise, and audience-appropriate written communication**, such as emails, letters, memos, resume', using correct grammar, tone, and format.
3. **Adapt communication style based on cultural, organizational, and situational contexts** to foster inclusive and respectful professional relationships.
4. **Employ digital communication tools and platforms** (e.g., video conferencing, business messaging apps) responsibly and effectively in remote or hybrid work environments.

Course Outcome: After completion of the course, the student will be able to

Bloom's
Knowledge
Level (KL)

| | | |
|-----|---|----|
| CO1 | Comprehend the principles and functions of technical communication. | K2 |
| CO2 | Write for specific audience and purpose to fulfil the provided brief | K3 |
| CO3 | Recognize and produce different kinds of technical documents. | K3 |
| CO4 | Apply effective speaking skills to efficiently carry out official discourses. | K3 |
| CO5 | Demonstrate their understanding of communication through digital media. | K3 |

| Course Code: BCSAI0412 | Course Name: CRM FUNDAMENTALS | | | | | | | | | | L | T | P | C |
| Course Offered in: CSE/CSE(R)/ CSE(TWIN)/ IT/ IT(TWIN)/ M.Tech(Int.) | | | | | | | | | | | 3 | 0 | 0 | 3 |
| Pre-requisite: None | | | | | | | | | | | | | | |
| Course Objective: This course is designed to help in understanding the fundamentals of CRM. It will help in providing better services for Sales, Marketing and Customer Relations in an Enterprise. To make the students understand the organizational need, benefits and process of creating long-term value for individual customers. To disseminate knowledge regarding the concept of e-CRM and e-CRM technologies. To enable the students understand the technological and human issues relating to implementation of Customer Relationship Management in the organizations. | | | | | | | | | | | | | | |
| Course Outcome- After completion of the course, the student will be able to | | | | | | | | | | | | Bloom’s Knowledge Level (KL) | | |
| CO 1 | Understand the basic concepts of Customer relationship management. | | | | | | | | | | | K1, K2 | | |
| CO 2 | To understand strategy and framework of Customer relationship management. | | | | | | | | | | | K2 | | |
| CO 3 | Learn basics of Cloud Based Customer relationship management. | | | | | | | | | | | K1 | | |
| CO 4 | Understand Customer relationship management in context with business use cases. | | | | | | | | | | | K2, K3 | | |
| CO 5 | Understand implementation basics of CRM. | | | | | | | | | | | K2, K3 | | |
| CO-PO Mapping | | | | | | | | | | | | | | |

| CO5 | 1 | 2 | 2 | 2 | 2 | - | - | 3 | 3 | 3 | 2 | 2 | 2 | |
| Course Contents / Syllabus | | | | | | | | | | | | | | |
| Module 1 | Introduction | | | | | | | | | | | 8 hours | | |
| CRM- definition, history, goals. Sources of CRM value. Components of CRM: people, process, technology. Evolution of CRM: marketing and its principles, customer relations to CRM. Dynamics of Customer Supplier Relationships, Nature and context of CRM, Strategy and Organization of CRM: strategy, The relationship-oriented organization: Mission, Culture, Structure, People, Communication & Information Systems. | | | | | | | | | | | | | | |
| Module 2 | CRM Strategy and Framework | | | | | | | | | | | 8 hours | | |
| Developing a CRM strategy. Customer oriented (C in CRM), Relationship driven, 360 degree view of customer. CRM system features- functions, application, benefits and solutions. Importance of loyalty- active, passive, split, shifting and switchers, customer profiling, customer segmentation model, Customer Experience, relationship marketing and journey, Case study. | | | | | | | | | | | | | | |
| Module 3 | Solution Design and Architecture | | | | | | | | | | | 8 hours | | |
| CRM system solution- specifications. Data Analysis, Solution Requirements. Types of CRM- On-Premise, cloud based. Pros and Cons of each. Integration CRM with other enterprise applications. The Technology of CRM: Data warehouses and customer relationships, creating data mart model, components of operational data warehouse. | | | | | | | | | | | | | | |
| Module 4 | CRM for Business | | | | | | | | | | | 8 hours | | |
| CRM in Sales, Service, Marketing, E-commerce. Social Customer Relationship Management. Analytical CRM: Predictive Analytics Vs | | | | | | | | | | | | | | |

| | | | | | | | |
|--|---|--------------------|----------|----------|------------------|-----|----------|
| Operational Analytics. Channel Partner Relationship management, Collaborative CRM (using data pooling), Business Benefits of Cloud Based System, SLAs, Practical Challenges. | | | | | | | |
| Module 5 | | CRM implementation | | | | | 8 hours |
| Building CRM roadmaps: current processes, customers, strategic goals, technology issues, pilot and proof of concept projects. Preliminary Roadmap and its template, developing roadmap midstream. Design stage, custom development, integration, reporting, data migration, and implementation, testing, launching and application management. Introduction to following CRM tools: ZOHO, Pega, Microsoft Dynamics 365, Sales force. | | | | | | | |
| Total Lecture Hours | | | | | | | 40 hours |

| Course Code: BCSE0411 | | Course Name: PYTHON WEB DEVELOPMENT WITH DJANGO | | | | | | L | T | P | C | | | | |
| Course Offered in: CSE/CSE(R)/ CSE(TWIN)/ IT/ IT(TWIN)/ M.Tech(Int.) | | | | | | 3 | 0 | 0 | | 3 | | | | | |
| Pre-requisite: Students should have good knowledge of Python Programming and Python coding experience. | | | | | | | | | | | | | | | |
| Course Objective: This course focuses on how to design and build statistics as well as dynamic webpages and interactive web-based applications. These courses mainly focus on how Python operates within web development using the increasingly popular Django framework. | | | | | | | | | | | | | | | |
| Course Outcome- After completion of the course, the student will be able to | | | | | | | | Bloom’s Knowledge Level (KL) | | | | | | | |
| CO 1 | | Apply the knowledge of python programing that are vital in understanding Django application and analyze the concepts, principles and methods in current client-side technology to implement Django application over the web. | | | | | | K3,K6 | | | | | | | |
| CO 2 | | Demonstrate web application framework i.e. Django to design and implement typical dynamic web pages and interactive web based applications. | | | | | | K3, K6 | | | | | | | |
| CO 3 | | Implementing and analyzing the concept of Integrating Accounts & Authentication on Django. | | | | | | K3, K4 | | | | | | | |
| CO 4 | | Understand the impact of web designing by database connectivity with SQLite in the current market place where everyone uses to prefer electronic medium for shopping, commerce, and even social life also. | | | | | | K2, K3 | | | | | | | |
| CO 5 | | Analyzing and creating a functional website in Django and deploy Django Web Application on Cloud. | | | | | | K3, K6 | | | | | | | |
| CO-PO Mapping | | | | | | | | | | | | | | | |
| | | CO/PO | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PSO1 | PSO2 |

| Course Contents / Syllabus | | | | | | | | | | | | | | | |
| Module 1 | | Python libraries for web development | | | | | | 8 hours | | | | | | | |
| Collections-Container datatypes, Tkinter-GUI applications, Requests-HTTP requests, BeautifulSoup4-web scraping, Scrapy, Zappa, Dash, CherryPy, Turbo Gears, Flask, Web2Py, Bottle, Falcon, Cubic Web, Quixote, Pyramid. | | | | | | | | | | | | | | | |
| Module 2 | | Introduction to Django Framework | | | | | | 8 hours | | | | | | | |
| Understanding Django environment, Features of Django and Django architecture, MVC and MTV, Urls and Views, Mapping the views to URLs, Django Template, Template inheritance Django Models, Creating model for site, Converting the model into a table, Fields in Models, Integrating Bootstrap into Django, Creating tables, Creating grids, Creating carousels. | | | | | | | | | | | | | | | |
| Module 3 | | Integrating Accounts & Authentication on Django | | | | | | 8 hours | | | | | | | |
| Introduction to Django Authentication System, Security Problem & Solution with Django Creating Registration Form using Django, Adding Email Field in Forms, Configuring email settings, Sending emails with Django, Adding Grid Layout On Registration Page, Adding Page Restrictions, Login Functionality Test and Logout. | | | | | | | | | | | | | | | |
| Module 4 | | Connecting SQLite with Django | | | | | | 8 hours | | | | | | | |

| | | |
|---|---|----------|
| Database Migrations, Fetch Data From Database, Displaying Data On Templates, Adding Condition On Data, Sending data from url to view, Sending data from view to template, Saving objects into database, Sorting objects, Filtering objects, Deleting objects, Difference between session and cookie, Creating sessions and cookies in Django. | | |
| Module 5 | Deploying Django Web Application on Cloud | 8 hours |
| Creating a functional website in Django, Four Important Pillars to Deploy, registering on Heroku and GitHub, Push project from Local System to GitHub, Working with Django Heroku, Working with Static Root, Handling WSGI with gunicorn, Setting up Database & adding users. | | |

| Sr. No | Program Title |
|--------|--|
| 1 | Understand and implement the different ER diagram notation with their relationship and Cardinalities. |
| 2 | Creating ER Diagram for company Database. Company database have entities like employee, departments, projects and dependents also implement the relationship and cardinalities between the entities with their relevant attribute. |
| 3 | Implement DDL, DML, DCL & TCL commands |
| 4 | Implementation of I/O Constraint: Primary Key, composite primary key, Foreign Key with on delete set null and on delete set null constraint, Unique Key |
| 5 | Implementation of Business Constraint: Null, Not Null, Default, Check. |
| 6 | Practicing Queries using Like, Between, Aliases, distinct Operator & Predicate. And Implement Aggregate Functions |

| | |
|----|--|
| 7 | Implementation of Queries using Where, Group by, Having and Order by Clause. |
| 8 | <p>Create a table EMPLOYEE with following schema:-(Emp_no, E_name, E_address, E_ph_no, Dept_no, Dept_name, Job_id, Designation, Salary)</p> <p>Write SQL statements for the following query.</p> <ol style="list-style-type: none"> List the E_no, E name, Salary of all employees working for MANAGER. Display all the details of the employee whose salary is more than the Sal of any IT PROFF. List the employees in the ascending order of Designations of those joined after 1981. List the employees along with their Experience and Daily List the employee who are either 'CLERK' or 'ANALYST'. List the employees who joined on 1-MAY-81, 3-DEC-81, 17-DEC-81. List the e_name those are starting with 'S'. Display total salary spent for each job category. Display lowest paid employee details under each manager. Display number of employees working in each department and their department name. Display the details of employees sorting the salary in increasing order. Show the record of employee earning salary greater than 16000 in each department. Add constraints to check, while entering the empno value (i.e) empno > 100. Define the field DEPTNO as unique. Create a primary key constraint for the column (EMPNO). |
| 9 | Implementation of Queries using set theory operators UNION, INTERSECT, MINUS. |
| 10 | Implementation of Queries using Inner Join:- Natural Join , Equi Join & Non Equi Join, Outer Join |
| 11 | Implementation of Queries nested Queries or Sub Queries: - IN, NOT IN, Exists, Not Exists, All and Any. |
| 12 | <p>Apply the set theory operators, join's and nested queries on company database (Case Study-1)</p> <p>Write the SQL Queries for the following statement.</p> <ol style="list-style-type: none"> Retrieve the names of employees in department 5 who work more than 10 hours per week on the 'ProductX' project. List the names of employees who have a dependent with the same first name as themselves. Find the names of employees that are directly supervised by 'Franklin Wong'. For each project, list the project name and the total hours per week (by all employees) spent on that project. Retrieve the names of all employees who work on every project controlled by department 5. Retrieve the names of all employees who do not work on every project For each department, retrieve the department name, and the average salary of |

| | |
|----|--|
| | <p>employees working in that department.</p> <p>III. Retrieve the average salary of all female employees.</p> <p>IX. Find the names and addresses of all employees who work on at least one project located in Houston but whose department has no location in Houston.</p> <p>X. List the last names of department managers who have no dependents.</p> <p>XI. Retrieve the names of all employees who work in the department that has the employee with the highest salary among all employees.</p> |
| 13 | Understand & implement the Database Connectivity with Java/Python etc. programming language |
| 14 | <p>Implementation and apply all the set theory operators, join and nested queries concept on Case study 1.</p> <p>I. Make a list of all project members for projects that involve an employee whose name is SCOTT either as a worker or as a manager of the department that controls the project.</p> <p>II. To retrieve the Social Security numbers of all employees who either work in department 5 or directly supervise an employee who works in department 5.</p> <p>III. To retrieve the SSN of all employee who work as a supervisor not a manager.</p> <p>IV. We want a list of all employee names as well as the name of the departments they manage if they happen to manage a department; if they do not manage one, we can indicate it with a NULL value.</p> <p>V. Retrieve the names of employees who have no dependents.</p> <p>VI. List the names of all employees with two or more dependents.</p> <p>VII. List the names of managers who have at least one dependent.</p> <p>VIII. Retrieve the names of all employees who do not have supervisors.</p> <p>IX. Retrieve the name of each employee who has a dependent with the same Last name as the employee.</p> |
| 15 | Implementation of Indexing, Views and sequence |
| 16 | <p>I. Write a PL/SQL Program to Add Two Numbers</p> <p>II. Write PL/SQL Program for Fibonacci Series</p> <p>III. Write PL/SQL Program to Find Greatest of Three Numbers</p> |
| 17 | Write a PL/SQL code block to calculate the area of a circle for a value of radius varying from 3 to 7. Store the radius and the corresponding values of calculated area in an empty table named Areas, consisting of two columns Radius and Area. |
| 18 | Write a PL/SQL code block that will accept an account number from the user, check if the users balance is less than the minimum balance, only then deduct Rs.100/- from the balance. |
| 19 | Create a row level trigger for the customers table that would fire for INSERT or UPDATE or DELETE operations performed on the CUSTOMERS table. This trigger will display the salary difference between the old values and new values: |
| 20 | Implementation of commit and rollback statement with amount transfer example. |

| | | | |

| S. No. | Program Title | | | | | | | | | | | | | | | |
| 1 | Write a program to implement an in-order traversal of a binary tree and print the nodes. | | | | | | | | | | | | | | | |
| 2 | Write a program to implement a pre-order traversal of a binary tree and print the nodes. | | | | | | | | | | | | | | | |
| 3 | Write a program to implement a post-order traversal of a binary tree and print the nodes. | | | | | | | | | | | | | | | |
| 4 | Write a program to count number of nodes in a binary tree | | | | | | | | | | | | | | | |
| 5 | Write a program to find the height of the tree | | | | | | | | | | | | | | | |
| 6 | Write a program to check if the Binary tree is balanced or not. | | | | | | | | | | | | | | | |
| 7 | Write a Program to search a number in Binary Search Tree (BST) | | | | | | | | | | | | | | | |
| 8 | Write a program to insert a node in a Binary Search Tree (BST). | | | | | | | | | | | | | | | |
| 9 | Write a program to delete a node from a Binary Search Tree (BST). | | | | | | | | | | | | | | | |
| 10 | Write a program to implement a max-heap and perform heap sort on an array of integers. | | | | | | | | | | | | | | | |
| 11 | Write a Program to implement human coding algorithm | | | | | | | | | | | | | | | |
| 12 | Write a program to implement priority queue using max heap. | | | | | | | | | | | | | | | |
| 13 | Write a program to create a graph using an adjacency matrix. | | | | | | | | | | | | | | | |

| | | |
|-----------------------------|--|--------------|
| 14 | Write a program to create a graph using an adjacency list. | |
| 15 | Write a program to perform Depth-First Search (DFS) on a graph. | |
| 16 | Write a program to perform Breadth-First Search (BFS) on a graph. | |
| 17 | Write a program to check if there is a path between two nodes in a graph using DFS. | |
| 18 | Write a program to find all the vertices reachable from a given vertex in a graph using BFS. | |
| 19 | Write a program to detect a cycle in an undirected graph using DFS. | |
| 20 | Write a program to detect a cycle in a directed graph using DFS. | |
| 21 | Write a program to find the degree of each vertex in an undirected graph. | |
| 22 | Write a program to count the number of connected components in an undirected graph. | |
| 23 | Write a program to implement Dijkstra Algorithm. | |
| 24 | Write a program to implement Prims Algorithm. | |
| 25 | Write a program to implement Kruskal Algorithm. | |
| 26 | Write a program to implement Floyd Warshall’s all pair shortest path algorithm. | |
| 27 | Write a program to implement Bellman ford Algorithm. | |
| 28 | Write a program to implement Longest common subsequence (LCS). | |
| 29 | Write a program to implement sum of subset problem using backtracking. | |
| 30 | Write a program to implement insertion and search operations in a Tree. | |
| | | |

| Course Contents / Syllabus | | | | | | | | | | | | | | | |
| Unit 1 | | | | Basics of Web Technology & Testing | | | | | | | | | | 10 hours | |
| Introduction: Introduction to Web Technology, History of Web and Internet, Connecting to Internet, Introduction to Internet services and tools, Client-Server Computing, Protocols Governing Web, Basic principles involved in developing a web site, Planning process, Types of Websites, Web Standards and W3C recommendations. Web Hosting: Web Hosting Basics, Types of Hosting Packages, Registering domains, Defining Name Servers. | | | | | | | | | | | | | | | |

| | | |
|--|--|----------|
| Using Control Panel, Creating Emails in Cpanel, Using FTP Client, Maintaining a Website. | | |
| Unit 2 | Introduction to HTML & XML | 14 hours |
| <p>HTML: What is HTML, DOM- Introduction to Document Object Model, Basic structure of an HTML document, Mark up Tags, Heading-Paragraphs , Line Breaks, Understand the structure of HTML tables. Lists, Working with Hyperlinks, Image Handling, Understanding Frames and their needs, HTML forms for User inputs. New form Elements- date, number, range, email, search and data list, Understanding audio, video and article tags.</p> <p>XML: Introduction, Tree, Syntax, Elements, Attributes, Namespaces, Display, HTTP request, Parser, DOM, XPath, XSLT, XQuery, XLink, Validator, DTD, Schema, Server.</p> | | |
| Unit 3 | Concepts of CSS3 & Bootstrap | 16 hours |
| <p>Concept of CSS 3: Creating Style Sheet, CSS Properties , CSS Styling(Background, Text Format, Controlling Fonts) , Working with block elements and objects , Working with Lists and Tables , CSS Id and Class, Box Model(Introduction, Border properties, Padding Properties, Margin properties) CSS Advanced(Grouping, Dimension, Display, Positioning, Floating, Align, Pseudo class, Navigation Bar, Image Sprites, Attribute sector) , CSS Color, Creating page Layout and Site.</p> <p>Bootstrap: Introduction, Bootstrap grid system, Bootstrap Components.</p> | | |
| Unit 4 | JavaScript and ES6 | 16 hours |
| <p>JavaScript Essentials: Introduction to Java Script , Javascript Types , Var, Let and Const Keywords, Operators in JS , Conditions Statements , Java Script Loops, JS Popup Boxes , JS Events , JS Arrays, Working with Arrays, JS Objects ,JS Functions , Using Java Script in Real time , Validation of Forms, Arrow functions and default arguments, Template Strings, Strings methods, Callback functions, Object de-structuring, Spread and Rest Operator, Typescript fundamentals, Typescript OOPs- Classes, Interfaces, Constructor etc. Decorator and Spread Operator Difference == & ===, Asynchronous Programming in ES6, Promise Constructor, Promise with Chain, Promise Race.</p> | | |
| Unit 5 | JavaScript and ES6 | 16 hours |
| <p>Introduction to PHP, Basic Syntax, Variables & Constants, Data Type, Operator & Expressions, Control flow and Decision making statements, Functions, Strings, Arrays.</p> <p>Working with files and directories: Understanding file& directory, Opening and closing, a file, Coping, renaming and deleting a file, working with directories, Creating and deleting folder, File Uploading & Downloading.</p> <p>Session & Cookies: Introduction to Session Control, Session Functionality What is a Cookie, Setting Cookies with PHP. Using Cookies with Sessions, Deleting Cookies, Registering Session variables, Destroying the variables and Session.</p> | | |
| Total Lecture Hours | | 72 hours |

List Of Practical's (Indicative & Not Limited To)

| Sr. No. | Program Title |
|----------------|---|
| 1 | A. Overview and Installation of various code editors. |
| 2 | B. Overview and Installation of various servers |
| 3 | Implementing HTML program that represent in the document as a start tag, which gives the name and attributes |
| 4 | Implementing HTML program that represents a document |
| 5 | Implementing HTML program to display your simple CV |
| 6 | Creating html document that represents document object model |
| 7 | To Create a table to show your class time table. |
| 8 | Apply various colors to suitably distinguish keywords , also apply font styling like italics, underline and two other fonts to words you find appropriate , also use header tags. |
| 9 | Create a webpage with HTML describing your department use paragraph and list tags |
| 10 | Implementing HTML program that for Heading |
| 11 | Implementing program that implement paragraph and line-break |
| 12 | Use tables to provide layout to your HTML page describing your college infrastructure. |
| 13 | Use and <div> tags to provide a layout to the above page instead of a table layout |
| 14 | Create links on the words e.g. —Wi-Fi and —LAN to link them to Wikipedia pages |
| 15 | Insert an image and create a link such that clicking on image takes user to other page |
| 16 | Change the background color of the page; At the bottom create a link to take user to the top of the page. |
| 17 | Creating HTML program to implement three articles with independent, self-contained content. |
| 18 | Creating a XML document that defines the self-descriptive tags |
| 19 | Designing XML document that store various book data such as: book category, title, author, year and price |
| 20 | To Describe the various types of XML key components |
| 21 | Design XML DTD to define the structure and legal element and attribute of XML document |
| 22 | To implement internal and external DTD |

| | |
|----|---|
| 23 | Use frames such that page is divided into 3 frames 20% on left to show contents of pages, 60% in center to show body of page, remaining on right to show remarks. |
| 24 | Design a HTML registration form that takes user name, user password and mobile number with submit button control |
| 25 | Design a HTML5 document that implement of date, number, range, email, search and data list. |
| 26 | Implementation in HTML5 that include native audio and video support without the need for Flash. |
| 27 | Create a simple form to submit user input like his name, age, address and favourite subject, movie and singer. |
| 28 | Add few form elements such as radio buttons, check boxes and password field. Add a submit button at last. |
| 29 | Add CSS property assign a style or behavior to an HTML element such as: color, border, margin and font-style. |
| 30 | Add To Style Text Elements with Font, Size, and Color in CSS |
| 31 | Applying a block element in CSS acquires up the full width available for that content. |
| 32 | Demonstrating the CSS Box model with consists of: borders, padding, margins, and the actual content. |
| 33 | Design a web page by applying CSS grouping and dimensions property. |
| 34 | Design a XML Schema that describes the structure of an XML document. |
| 35 | Design a XML document that describe the well-formed XML document |
| 36 | Design a XML document of CD Catalog through each <CD> element, and displays the values of the <ARTIST> and the <TITLE> elements in an HTML table |
| 37 | Create a XSL document for and taken xml document by you. |
| 38 | Create a XSLT document for and taken xml document by you with all steps |
| 39 | Design a web page by applying CSS Display and Positioning property. |
| 40 | Design a web page by applying CSS Display and Positioning property . |
| 41 | Design a web page by applying CSS pseudo classes. |
| 42 | Creating a Java Script code to implement all data types. |
| 43 | Design a basic structure of Bootstrap Grid system. |
| 44 | Design All Bootstrap Components with example. |
| 45 | Implementing a program in Java script to implement augmented function. |

| | |
|----|---|
| 46 | Implementing a program to implement calculator application as real time. |
| 47 | Design a HTML form validation using Java Script. |
| 48 | Write a program to implement Arrow function with default argument in ES6 |
| 49 | Implementing a program in ES6 to implement Template string concepts |
| 50 | Implementing a program in ES6 to implement all string methods. |
| 51 | Creating a Java Script program to implement Dialog, Confirm and Message Popup Boxes. |
| 52 | Implementing a Java Script program to implement onClick and onSubmit event |
| 53 | Creating a java script code to implement 'let' keyword |
| 54 | Creating a java script code to implement 'const' keyword |
| 55 | Implementing a program to implement call back functions in ES6. |
| 56 | Implementing a program for de-structuring of an array in ES6 |
| 57 | Javascript code to implement object and class concepts in Typescript. |
| 58 | Write a Typescript program that implement interface and constructor |
| 59 | Write a code in typescript that implement decorator and spread operator |
| 60 | Create a constant by using define() function with its proper syntax |
| 61 | Creating PHP script that return any data types whatever you use. |
| 62 | Implementing a code in Java Script to implement Spread and rest operator |
| 63 | Javascript code that should compile by Typescript compiler as'tsc' |
| 64 | Write a code in typescript that implement Asynchronous Programming concepts. |
| 65 | Write a program in Typescript that implement promise constructor |
| 66 | Implementing promise and chain concepts in Typescript |
| 67 | Write a code in typescript that implement Promise.race() static method. |
| 68 | Crating a program that implement control flow and decision making statement. |
| 69 | Creating PHP to implements parameterized function |
| 70 | Creating program in PHP to store multiple string and concatenate these string and print it. |
| 71 | Write a PHP script to create and delete directory structure |
| 72 | Program to upload and download a file in PHP |

| | |
|----|--|
| 73 | Implements single dimension array in PHP |
| 74 | Write a PHP code to open and close a file in a proper manner |
| 75 | Write a PHP script to copying, renaming and deleting a file. |
| 76 | PHP program to create and destroy a session. |
| 77 | PHP program to set and delete a cookie. |
| 78 | PHP program to manually register the session variable |
| 79 | PHP program to manually destroy the session variable |
| 80 | PHP program to store the session data on one page and would be available on second page. |

CO-PO Mapping (Scale 1: Low, 2: Medium, 3: High)

| CO-PO Mapping | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PSO1 | PSO2 |

| CO2 | 3 | 3 | 2 | 2 | 2 | - | 2 | - | - | - | 2 | 2 | 2 |
| CO3 | 3 | 3 | 2 | 2 | 3 | 1 | 2 | 2 | - | - | 3 | 3 | 3 |

Problem Statements need to be discussed in lab session: Control Statements

A company wants to create a secure password generator for their employees. The password must be based on specific numeric properties to enhance its complexity and security. Write a program to validate and generate a secure password according to the following rules:

- The user must input a 3-digit number. The program should first check if the number is a prime number.
- If it is not a prime number, the user should be prompted to enter another number until a valid prime number is provided.

- Once a valid prime number is entered, calculate the sum of its digits. If the sum of the digits is not divisible by 3, ask the user to enter another prime number until a valid one is found.

- Check entered prime number is Armstrong or not? If Armstrong are found, prompt the user to enter another prime number and repeat the process.

Password Generation:

Concatenate the 1 if entered prime number is Armstrong otherwise 2 with the sum of the digits of the valid prime number to form the secure password.

Example Scenario:

Sample Input

Enter a 3-digit prime number: 153

Sum of digits of 153 = 9

The sum is divisible by 3.

153 is Armstrong number

Sample Output

Secure Password: 19

2. Write a function to input electricity unit charges and calculate total electricity bill according to the given condition:

For first 50 units Rs. 0.50/unit

For next 100 units Rs. 0.75/unit

For next 100 units Rs. 1.20/unit

For unit above 250 Rs. 1.50/unit

An additional surcharge of 20% is added to the bill

3. Write a method to generate a secure code which the sum of all possible palindrome numbers between given two numbers.

For Example:

Input: 10, 80

Output: 308

Explanation: All palindrome numbers between 10 & 80 are: 11,22,33,44,55,66,77

Password= 11+22+33+44+55+66+77 = 308

4. Draw the following Patterns for N=5

Problem Statements need to be discussed in lab session: Recursive Approach (Basic)

1. Write a program that takes an integer n as input and prints the multiplication table of n from $n * 1$ to $n * 10$. The output should clearly show each multiplication step.
2. Write a program to calculate the sum of all integers from 1 to a given number N . The program should take N as input and output the total sum using iteration or recursion.
3. **Find the GCD of Two Numbers Using Recursion:**
Write a recursive function to calculate the Greatest Common Divisor (GCD) of two numbers using Euclid's algorithm. The function should take two integers as input and return their GCD.
4. **Find the LCM of Two Numbers Using Recursion:**
Write a program to compute the Least Common Multiple (LCM) of two numbers using recursion. You may use the relationship $LCM(a, b) = |a * b| / GCD(a, b)$ and a recursive function for GCD.

Problem Statements need to be discussed in lab session: Bit Manipulation

1. Write a program to count the number of set bits (1s) in the binary representation of a given integer. The program should efficiently use bitwise operations to perform the task without converting the number to a string.
2. Write a program that takes a number and a bit position as input and checks whether the bit at that position is set (1) or clear (0). Use bitwise operators to perform the check.
3. Given a number and a position, write a program to toggle (invert) the bit at the given position using bitwise operations. The result should reflect the updated value of the number after flipping the bit.
4. Write a program to compute the XOR of all numbers from 1 to n using a mathematical pattern (not a loop). Use bitwise XOR properties to achieve an efficient solution.
5. Given an array of size $n-1$ containing unique elements from 1 to n , find the missing number using bit manipulation (preferably XOR approach) without sorting or using extra space.
6. Given an array where all elements repeat twice except two elements that appear only once, write a program to find the two non-repeating elements using bitwise operations in linear time and constant space.

| |
|---|
| <p>7. Write a program to check if a given number is a power of two using bit manipulation. A number is a power of two if it has exactly one set bit in its binary representation.</p> |
| <p>8. Given two integers A and B, write a program to count how many bits need to be flipped to convert A to B. Use XOR to find differing bits and count the number of set bits.</p> |
| <p>9. Write an efficient program to count the total number of set bits in binary representations of all numbers from 1 to n. Optimize the approach using bitwise logic and recursion.</p> |
| <p>10. Write a program to calculate the square of a number using only bitwise operations and addition. Do not use multiplication, division, or any power functions.</p> |
| <p>11. Write a function to add two integers using bitwise operations only. Avoid using the + or - operators. Implement logic using XOR and AND operations for binary addition.</p> |
| <p>12. Write a program to generate the power set (all subsets) of a given set using bitwise representation. Each subset can be represented by a binary number where each bit indicates inclusion of the corresponding element.</p> |
| <p>Problem Statements need to be discussed in lab session: Arrays (Try to use sliding window, prefix sum, cadence, recursion, bit manipulation, two pointer approaches)</p> |
| <p>1. Sarah is assisting the "MathMinds Club" in creating passwords for their online platform. They have a list of numbers, some stable and some unstable. Define a function that can help Sarah calculate the password according to the given scenario. Scenario:</p> <ul style="list-style-type: none"> • There are N numbers provided. • A number is stable if each digit appears the same number of times. • A number is unstable if the frequency of its digits is not the same. • The password is computed as the sum of all stable numbers minus the sum of all unstable numbers. • Consider only those numbers in the list that have more than equal to three digits. <p>For example: Input: N=5 List: 12, 1313, 122, 678, 898 Output: Password: 971</p> |
| <p>2. Given an array of integers, including possible negative values, you are allowed to modify at most one element by doubling its value. The goal is to find the maximum possible sum of any subarray after making this modification.</p> <p>Input: arr = [-2, 1, -3, 4, -1, 2, 1, -5, 4] Expected Output:</p> <ul style="list-style-type: none"> • Original Maximum Subarray Sum: 6 (achieved from [4, -1, 2, 1]) • Maximum Sum After Modification: 10(achieved from [8, -1, 2, 1], where the value 4 is doubled to 8). |
| <p>3. For a given string, generate a pattern based on the following rules:</p> |

Input: A string of characters (e.g., "HAT").

Output: Generate patterns by replacing characters with the numeric value 1 and process the patterns as described below:

1. Replace one character at a time with 1:

- For each character in the string, replace it with 1, keeping the other characters unchanged.
- Example for "HAT":
1AT, H1T, HA1

2. Replace two characters at a time with 1:

- Replace every combination of two characters with 1, keeping the remaining character unchanged.
- If 1s are consecutive, replace them with their sum (e.g., 11T becomes 2T).
- Example for "HAT":
11T → 2T, H11 → H2, 1A1

3. Replace all characters with 1:

- Replace all characters in the string with 1.
- If there are consecutive 1s, sum them up (e.g., 111 becomes 3).
- Example for "HAT":
111 → 3

Final Output

For the string "HAT", the output should be:

1AT, H1T, HA1, 2T, H2, 1A1, 3.

- 4.** Given a sorted array `arr []` and a target value, the task is to count triplets (i, j, k) of valid indices, such that $arr[i] + arr[j] + arr[k] = \text{target}$ and $i < j < k$.

Examples:

Input: `arr[] = [-3, -1, -1, 0, 1, 2]`, `target = -2`

Output: 4

- 5.** You are given an array `prices[]` where `prices[i]` represents the price of a given stock on day i. You want to maximize your profit by choosing a single day to buy one stock and choosing a different day in the future to sell that stock. Write a program to return the maximum profit you can achieve from this transaction. If no profit is possible, return 0.

6. Find the "Kth" max and min element of an array:

Given k, find the k-th smallest and k-th largest element in the array.

Input: `arr = [7, 10, 4, 3, 20, 15]`, `k = 3`

Output: Kth Smallest: 7, Kth Largest: 10

- 7.** Sort a binary array with values 0, 1, and 2 using constant space and one pass (Dutch National Flag algorithm).

Input: [0, 2, 1, 2, 0]

Output: [0, 0, 1, 2, 2]

8. Find longest consecutive subsequence:

Return the length of the longest consecutive elements sequence.

Input: [1, 9, 3, 10, 4, 20, 2]

Output: 4 (Sequence: 1, 2, 3, 4)

- 9.** Given a number of bits and a number K. In one flip you can toggle exactly K consecutive bits. With only this flip operation available, convert the string into all 1.

Input String: 0000110000 and K=3

Following are four flip operations by using which all bits converted into 1's.

Flip1-1110110000 Flip2- 1110110111

Flip3-1111000111 Flip4- 1111111111

If it is not possible to convert all bits into one's then print "IMPOSSIBLE".

- 10.** Given a list of non-negative integers, arrange them in such a way that they form the largest possible number. Since the result can be very large, return it as a string in **$O(N \log N)$** time complexity.

Example-1

Input:

N = 5

Arr[] = {3, 30, 34, 5, 9}

Output: 9534330

Example-2

Input:

N = 4

Arr[] = {54, 546, 548, 60}

Output: 6054854654

- 11.** Given an array arr[] of size n containing distinct integers within the range [1, n+2], find the two missing numbers from the first n+2 natural numbers.

Constraints:

- The solution must run in **$O(N)$** time and use **$O(1)$** extra space.
- The array does not contain duplicate values.

Examples:

Input: arr[] = [1, 2, 4, 6, 3, 8], n = 6

Output: 5, 7

- 12.** Given a string str of lowercase alphabets and a number k, the task is to print the minimum value of the string after removal of k characters. The value of a string is defined as the sum of squares of the count of each distinct character present in the string. Return the minimum possible required value. **Examples:**

Input: str = "abccc", k = 1

Output: 6

Input: str = "aabcbcbcabcc", k = 3

Output: 27

Expected Time Complexity: $O(n+k \log(p))$

Note: Here n is the length of string and p is number of distinct alphabets and k number of alphabets to be removed.

- 13.** Given a non-negative integer S represented as a string, remove K digits from the number so that the new number is the smallest possible.

Note : The given num does not contain any leading zero.

Expected Time Complexity: $O(|S|)$.

Example 1:

Input:

S = "149811", K = 3

Output:

111

Example 2:

Input:

S = "1002991", K = 3

Output:

21

- 14.** You are given a two-dimensional grid board[][] of size n * m consisting of English letters and a string target. Your task is to determine whether the target word can be formed by sequentially connecting letters from the

grid. You may move to adjacent cells **horizontally or vertically** (not diagonally), and **a cell may not be reused** once it is part of the current path.

Examples:

Input:

board[][] = [['C', 'A', 'T'], ['R', 'A', 'K'], ['T', 'O', 'N']],

target = "CART"

Output: true

Explanation:

You can trace the word "CART" through the path: C → A → R → T (moving horizontally and vertically, without repeating cells).

15. Given an encoded string s, the task is to decode it. The encoding rule is:

- **k[encodedString]**, where the **encodedString** inside the square brackets is being repeated exactly **k** times. Note that **k** is guaranteed to be a positive integer, and encodedString contains only lowercase english alphabets.

Note: The test cases are generated so that the length of the output string will never exceed 10^5 .

Examples:

Input: s = "1[b]"

Output: "b"

Input: s = "3[b2[ca]]"

Output: "bcacabcacabcaca"

**Competitive coding list will be shared with the students.*

Total Hours: 30 hrs.
