NOIDA INSTITUTE OF ENGINEERING & TECHNOLOGY, GREATER NOIDA

(An Autonomous Institute)

B. TECH (BT)

AICTE Guidelines in Model Curriculum:

A student will be eligible to get Under Graduate degree with Honours only, if he/she completes the additional MOOCs courses such as Coursera certifications, or any other online courses recommended by the Institute (Equivalent to 20 credits). During Complete B.Tech. Program Guidelines for credit calculations are as follows.

1.	For 6 to 12 Hours	=0.5 Credit
2.	For 13 to 18	=1 Credit
3.	For 19 to 24	=1.5 Credit
4.	For 25 to 30	=2 Credit
5.	For 31 to 35	=2.5 Credit
6.	For 36 to 41	=3 Credit
7.	For 42 to 47	=3.5 Credit
8.	For 48 and above	=4 Credit

For registration to MOOCs Courses, the students shall follow Coursera registration details as per the assigned login and password by the Institute these courses may be cleared during the B. Tech degree program (as per the list provided). After successful completion of these MOOCs courses, the students shall provide their successful completion status/certificates to the Controller of Examination (COE) of the Institute through their coordinators/Mentors only.

The students shall be awarded Honours Degree as per following criterion.

- i. If he / she secures 7.50 as above CGPA.
- ii. Passed each subject of that degree program in the single attempt without any grace.
- iii. Successful completion of MOOCs based 20 credits.

B.TECH. SECOND YEAR				
Course Code	ABT0304	LTP	Credits	
Course Title	Bioinformatics	3 1 0	4	
C1:4:				

Course objective

- 1. To understand the principles of analyzing biological data, building models and testing hypotheses using computer science algorithms.
- 2. This course is a survey of algorithms and tools in biological sequence analysis, genome-wide disease association, and precision medicine. Basic concept machine learning and its application in the analysis of biological data are also included in this course.
- **3.** To understand a basic overview of various information repositories widely used in biological sciences; and tools for searching or querying those databases.
- **4.** To build the foundation of sequence alignment techniques and find evolutionary connections.
- 5. To understand students to analyze mRNA expression annotations.

Pre-requisites:

Course Contents / Syllabus

UNIT-I General Introduction:

7Hours

To study bioinformatics and its applications. Biological databases and tools: Nucleotide sequence databases, Protein sequence, structural and functional databases, Patent database, *in silico* tools for rDNA technology.

UNIT-II Database searching:

8Hours

BLAST and its types, Entrez, Ensembl-Biomart, Pairwise Sequence alignment: Pairwise alignment, Dynamic programing, Scoring Matrices, Gaps, Multiple sequence alignment: Dynamic and heuristic methods.

UNIT-III Phylogenetic analysis:

8Hours

Relevance to inferences about evolution, introduction to molecular phylogeny, introduction, Types of Phylogenetic Trees, Methods and Applications. Bootstrap etc algorithm. Genome sequencing technologies and analysis methods; transcription factor regulation and motif finding.

UNIT-IV Computational Epigenetics:

9Hours

Epigenetics and its role in transcription regulation, development, and diseases. Genomic variations and its associations: Linking genes, variations and diseases; Introduction to biomarkers and personalized medicine. Network biology and human diseases: Genome-wide association studies of humandiseases, Genome editing tools and applications to human diseases.

UNIT-V Machine learning:

8Hours

Classification, Regression, SVM, Decision Trees, Artificial Neural Networks, Big Data in Biology. Molecular modeling (Homology and **Ab initio**) and validation (Procheck, verify 3D etc), Docking, Molecular dynamics, Energy calculations, Classical and semi-classical calculations, Quantum mechanical approaches.

Course outcome: After completion of this course students will be able to CO 1 Understanding the methodologies used for database searching, and determining the accuracies of database search. CO 2 Understand basic algorithms used in Pairwise and Multiple alignments. To predict structure from sequence and subsequently testing the accuracy of predicted structures. CO 4 To determine the protein function from sequence through analyzing data. CO 5 To analyse and development of models for better interpretation of biological data to extract knowledge.

Course obj		•
1	The course provides the students with a conceptual and experimental background discipline of cell and microbiology. The students will be introduced to the commajor groups of microorganisms and their diversity in structure and function interactions. Emphasis has been laid on bacterial growth, nutrition, control, genetics. The course also introduces the students to the scope and relevance of field of medicine, agriculture, and industry.	ncept of Cell and ns and microbial metabolism, and
Pre-requis	tes: Cell Biology	
	Course Contents / Syllabus	
UNIT-I	Microscopy:	8L
Historical a	ccount of cell biology; Cell theory. Prokaryotic cell and it's ultrastructure. Eul	karyotic cell- cell
wall, cell	membrane, cytoskeleton, nucleus, chloroplast, mitochondria, endoplasmic	reticulum, Golgi
bodies, ribo	somes, lysosomes, vacuoles and centrosomes.	
UNIT-II	Cell cycle and division:	8L
Cell cycle a	and division - mitosis and meiosis. Cell Growth, Growth Kinetics, Cell- Cell J	function and Cell
Signalling		
UNIT-III	History of Microbiology:	8L
=	Microbiology, Nutritional requirement of microorganisms, Types of	_
	n and Sterilization, Classification of bacteria and colony morphology	, Structrue and
	on of viruses, Lytic and Lysogenic cycles.	Loz
UNIT-IV	Industrial Microbiology:	8L
Bioremedia	of Microbes in Air and water, air sampling, Water treatment, Bacteriological attion. Biofertilizers, industrially important micro-organisms, secondary metabo Microbiology of foods, Single cell Protein. Fermented food.	=
UNIT-V	Medical Microbiology:	8L
Diseases ca	used bacteria, virus, fungi, and protozoans; Fungal diseases, Vaccines, Anti-	microbial agents,
Antibiotics	and disinfectants, Cancer.	
Course out	come: After completion of this course students will be able to	
CO 1	1. Describe the detailed molecular structure and functioning of the key components of the cell, their culturing techniques and preservation methods.	K1
CO 2	2. Compare and analyse various physical & chemical methods of controlling microbial growth.	N2
CO 3	3. Acquire skills and knowledge on the role of beneficial microorganisms in environment	K1
CO 4	4. Apply the knowledge and understanding of the nature and particular attributes of microorganisms as a basis for studies in the applied area of agricultural microbiology and Industrial microbiology.	K3
CO 5	5. Understand the causes and consequences of medical microbiology in different disease and can comprehend the characteristics and origin of cancerous cells.

CO 4	Students wil	Students will have enhanced their knowledge for doing extraction of RNA from animal and plant			d plant tissues		
	(K_1,K_2)						

B. TECH. SECOND YEAR							
Course Code	ANC0301	L	T	P	Credit		
Course Title	Cyber Security	2	0	0	0		

Course objective:

Achieve knowledge about Security of Information system and Risk factors and examine security threats and vulnerability in various scenarios, understand concept of cryptography and encryption technique to protect the data from cyber-attackand provide protection for software and hardware.

Pre-requisites: Basics recognition in the domain of Computer Science.

Concept of network and operating system.

Commands of programming language.

Course Contents / Syllabus

UNIT-I Introduction 8 Hours

Introduction to Information Systems: Types of Information Systems, Development of Information Systems, Need for Information Security, Threats to Information Systems, Information Assurance, Guidelines for Secure Password and WI-FI Security and social media and Windows Security, Security Risk Analysis, and Risk Management.

UNIT-II Application Layer Security

8 Hours

Data Security Considerations-Backups, Archival Storage and Disposal of Data, Security Technology-Firewall, Intrusion Detection, Access Control, Security Threats -Viruses, Worms, Trojan Horse, Bombs, Trapdoors, Spoofs, E-mail Viruses, Macro Viruses, Malicious Software, Network and Denial of Services Attack, Security, Threats to E-Commerce: Electronic Payment System, e- Cash, Issues with Credit/Debit Cards.

UNIT-III Secure System Development

8 Hours

Application Development Security, Architecture & Design, Security Issues in Hardware: Data Storage and Downloadable Devices, Mobile Protection, Security Threats involving in social media, Physical Security of IT Assets, Access Control, CCTV and Intrusion Detection Systems, Backup Security Measures.

UNIT-IV Cryptography And Network Security

8 Hours

Public key cryptography: RSA Public Key Crypto with implementation in Python, Digital Signature Hash Functions, Public Key Distribution.

Symmetric key cryptography: DES (Data Encryption Standard), AES (Advanced Encryption Standard), Secure hash algorithm(SHA-1).

Real World Protocols: Basic Terminologies, VPN, Email Security Certificates, Transport Layer Security, TLS, IP security, DNS Security.

UNIT-V Security Policy

8 Hours

Policy design Task, WWW Policies, Email based Policies, Policy Revaluation Process-Corporate Policies-Sample Security Policies, Publishing and Notification Requirement of the updated and new Policies. Resent trends in security.

Course outcome:

At the end of course, the student will be able to

CO 1 Analyze the cyber security needs of an organization.

K4

CO 2	Identify and examine software vulnerabilities and security solutions.	K1,K3
CO 3	Comprehend IT Assets security (hardware and Software) and performance indicators	K2
CO 4	Measure the performance and encoding strategies of security systems.	K3, K5
CO 5	Understand and apply cyber security methods and policies to enhance current scenario security.	K2, K3

B. TECH. SECOND YEAR							
Course Code		ANC0302	LTP	Credits			
Cour	rse Title	Environmental Science	2 0 0	0			
Cour	rse objectiv	/e:		•			
1	To help the	students in realizing the inter-relationship between man and er	vironment. and				
	help the stud	lents in acquiring basic knowledge about environment.					
2	To develop the sense of awareness among the students about environment and its various problems.						
3	To create positive attitude about environment among the student.						
4	4 To develop proper skill required for the fulfilment of the aims of environmental education and educational						
	evaluations						
5	To develop the capability of using skills to fulfil the required aims, to realise and solve environmental						
	problems through social, political, cultural and educational processes						

Pre-requisites: Basic knowledge of nature.

Course Contents / Syllabus

UNIT-I Basic Principle of Ecology

8 Hours

Definition, Scope and basic principles of ecology and environment. Ecosystem: Basic concepts, components of ecosystem. Food chains and food webs. Ecological pyramids, Energy flow in ecological systems, Characteristics of different ecosystems. Biogeochemical Cycles: Importance, gaseous and sedimentary cycles. Carbon, Nitrogen, Phosphorus and Sulphur Cycles.

Basic concepts of sustainable development, SDGs, Ecosystem services, UN Decade for Ecorestoration.

UNIT-II | Natural Resources and Associated Problems

8 Hours

Natural resources and associated problems. Forest resources: Use and over-exploitation, deforestation. Timber extraction, mining, dams and their effects on forest and tribal people. Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources. Food resources: World food problems, changes caused by agriculture and over-grazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity.

Land resources: Land as a resource, land degradation, man induced landslides. Equitable use of resources for sustainable lifestyles.

Non-Renewable Energy Resources: Fossil fuels and their reserves, Nuclear energy, types, uses and effects, Renewable Energy Resources: hydropower, Solar energy, geothermal, tidal and wind energy, Biomass energy, biogas and its advantages.

UNIT-III Biodiversity Succession and Non-Renewable Energy Resources

8 Hours

Biodiversity and their importance, Threats to biodiversity, major causes, extinction's, vulnerability of species to extinction, IUCN threat categories, Red data book.

Strategies for biodiversity conservation, principles of biodiversity conservation in-situ and ex-situ conservation strategies Mega diversity zones and Hot spots, concepts, distribution and importance.

Succession: Concepts of succession, Types of Succession. Trends in succession. Climax and stability.

UNIT-IV | Pollution and Solid Waste Management

8 Hours

Air pollution: sources of air pollution, Primary and secondary air pollutants. Origin and effects of SOX, NOX, Cox, CFC, Hydrocarbon, control of air pollution. Water pollution: sources and types of water pollution, Effects of water pollution, Eutrophication, Soil pollution: Causes of soil pollution, Effects of soil pollution, Major sources of and effects of noise pollution on health, Radioactive and thermal pollution sources and their effects on surrounding environment.

Solid waste disposal and its effects on surrounding environment, Climate change, global warming, acid rain, ozone layer depletion.

UNIT-V Role of Community and Environmental Protection Acts

8 Hours

Role of community, women and NGOs in environmental protection, Bioindicators and their role, Natural hazards, Chemical accidents and disasters risk management, Environmental Impact Assessment (EIA), Salient features of following Acts: a. Environmental Protection Act, 1986, Wildlife (Protection) Act, 1972.b. Water (Prevention and control of pollution) Act, 1974.c. Air (Prevention and control of pollution) Act, 1981. Forest (Conservation) Act, 1980.d. Wetlands (Conservation and Management) Rules, 2017; e. Chemical safety and Disaster Management law. F. District Environmental Action Plan. Climate action plans.

Course outcome: After completion of this course students will be able to

CO 1	Understand the basic principles of ecology and environment. Ecosystem: Basic concepts,	K2
	components of ecosystem., food chains and food webs. Ecological pyramids	
CO 2	Understand the different types of natural recourses like food, forest, minerals and energy and their	K2
	conservation	
CO 3	Understand the importance of biodiversity, Threats of biodiversity and different methods of	K2
	biodiversity conservation.	
CO 4	Understand the different types of pollution, pollutants, their sources, effects and their control	K3
	methods	
CO 5	Understand the basic concepts of sustainable development, Environmental Impact Assessment	K3
	(EIA) and different acts related to environment

UNIT-III METHODS FOR ATOMIC-RESOLUTION STRUCTURE 8h Waray crystallography, solution- and solid-state NMR spectroscopy, Single particle Cryo Electro Microscopy, XRay Free-Electron Laser (XFEL). Anisotropy Use of Circular Dichroism, Steady-state art time-resolved fluorescence spectroscopy, FRET, Single molecule fluorescence, Electron Paramagnet Resonance spectroscopy. UNIT-IV DNA AND RNA STRUCTURES: DNA and RNA secondary structures (duplex, triplex, quadruplexes and aptamers), RNA secondar structure prediction.Structure of Sugars and lipids UNIT-V STRUCTURAL DYNAMICS: Bh Dynamics of Protein-RNA complexes; Structure and organization genome Simulations: Protein functional dynamics, Protein dynamics studies by MD simulations; Protein dynamic studies by biophysical techniques. Course outcome: After completion of this course students will be able to Understand about the different techniques and experimental approaches that represent the state-of-the-art and are widely used in the study of proteins. CO 3 Understand the different applications of protein structure. Understand the different applications of protein structure. Understand the relevance of structural biolo	4	To enha	ance the knowledge about type of protein structure			
Course Contents / Syllabus	5	To gain	the information about usage of structural biology in future career	r		
UNIT-I PROTEIN STRUCTURAL BIOLOGY: Protein sequences, sequence alignment; basic polypeptide stereochemistry, hierarchy in protein fold secondary structure, tertiary structure, quaternary structure. Chaperones assisted protein production Thermodynamics of protein stability. Effect of amino acid on protein structure. UNIT-II PROTEIN STRUCTURE AND ANALYSIS: 8h Principles of soluble and membrane protein purification, Phase diagram and separation, crystallization, Use of robotics in crystallization, Space groups and symmetry, structure determination; NMR samp preparation, Sample preparation for Cryo EM, Structure validation and best practices on the use of protein structures from protein data bank; Protein fold-function relationships, Protein Data Bank (PDB) and El Data Bank, BioMagResBank (BMRB). UNIT-III METHODS FOR ATOMIC-RESOLUTION STRUCTURE 8h METHODS FOR ATOMIC-RESOLUTION STRUCTURE 8h Warray crystallography, solution- and solid-state NMR spectroscopy, Single particle Cryo Electro Microscopy, XRay Free-Electron Laser (XFEL). Anisotropy Use of Circular Dichroism, Steady-state are time-resolved fluorescence spectroscopy, FRET, Single molecule fluorescence, Electron Paramagnet Resonance spectroscopy. UNIT-IV DNA AND RNA STRUCTURES: Bh DNA and RNA secondary structures (duplex, triplex, quadruplexes and aptamers), RNA secondar structure prediction. Structure of Sugars and lipids UNIT-V STRUCTURAL DYNAMICS: By Dynamics of Protein-RNA complexes; Structure and organization genome Simulations: Protein functional dynamics, Protein dynamics studies by MD simulations; Protein dynamic understanding of the basic science of Protein and Nucleic Acid (DNA and RNA) structure, including first principles of physical interactions that maintain proteins and the mechanisms that make them intact. CO 1 Understand about the different techniques and experimental approaches that represent the state-of-the-art and are widely used in the study of proteins. CO 3 Understand the different applications of protein structure. Offe	Pre-requisite	es:				
Protein sequences, sequence alignment; basic polypeptide stereochemistry, hierarchy in protein fold secondary structure, tertiary structure, quaternary structure. Chaperones assisted protein production Thermodynamics of protein stability. Effect of amino acid on protein structure. UNIT-II PROTEIN STRUCTURE AND ANALYSIS: 8h Principles of soluble and membrane protein purification, Phase diagram and separation, crystallization, Use of robotics in crystallization, Space groups and symmetry, structure determination; NMR samp preparation, Sample preparation for Cryo EM, Structure validation and best practices on the use of protein structures from protein data bank; Protein fold-function relationships, Protein Data Bank (PDB) and ED Data Bank, BioMagResBank (BMRB). UNIT-III METHODS FOR ATOMIC-RESOLUTION STRUCTURE BETTERMINATION: X-ray crystallography, solution- and solid-state NMR spectroscopy, Single particle Cryo Electrom Microscopy, XRay Free-Electron Laser (XFEL), Anisotropy Use of Circular Dichroism, Steady-state are time-resolved fluorescence spectroscopy, FRET, Single molecule fluorescence, Electron Paramagnet Resonance spectroscopy. UNIT-IV DNA AND RNA STRUCTURES: 8h DNA and RNA secondary structures (duplex, triplex, quadruplexes and aptamers), RNA secondar structure prediction. Structure of Sugars and lipids UNIT-V STRUCTURAL DYNAMICS: 8h Dynamics of Protein-RNA complexes; Structure and organization genome Simulations: Protein functional dynamics, Protein dynamics studies by MD simulations; Protein dynamics which by biophysical techniques. Course outcome: After completion of this course students will be able to Goal Understand about the different techniques and experimental approaches that represent the state-of-the-art and are widely used in the study of proteins. CO 1 Understand the different applications of protein structure. GO 3 Understand the different applications of protein structure. 	B. TECH. SECOND YEAR	
Course Code	AASL0401 LTP	Credit
Course Title	Technical Communication 2 1 0	3
Course objecti	ve:	L
1 To help th	e students develop communication and critical thinking skills necessary	for securing a
job, and su	acceeding in the diverse and ever-changing workplace of the twenty firs	t century
2 To enable	students to communicate effectively in English at the workplace.	<u> </u>
Pre-requisites:		
_	nt must have a good degree of control over simple grammatical fo	orms and som
	rammatical forms of English language.	
 The studer 	nt should be able to speak English intelligibly.	
	Course Content / Syllabus	
UNIT-I	Introduction to Technical Communication and Reading	4 Hours
• Fundamen	tals of technical communication	
	chnical communication	
_	omprehension - central idea, tone, and intention	
Critical real	ading strategies	
UNIT-II	Technical Writing 1	5 Hours
• Characteri	stics of technical writing; technical vocabulary, etymology	•
 Business le 	etters /emails – types, format, style and language	
 Notices, ag 	genda and minutes	
 Job application 	ation, CV and resume	
UNIT-III	Technical Writing 2	5 Hours
• Technical	reports – types & formats	
• Structure of	of a report	
 Technical 	Proposal - structure and types	
 Technical/ 	Scientific paper writing	
UNIT-IV	Public Speaking	5 Hours
	ats of effective speaking (emphasis on voice dynamics)	C Hours
-	nd conference presentation	
	g/ participating in meetings	
	for a job interview	
Mobile eti		
UNIT-V	Manuscript Preparation	5 Hours
Short repo	rt writing	L
_	ng and referencing	
	g writing style – Jargons, Abbreviations	
• Ethical wr	iting	
Course outcon	1e: At the end of the course the students will be able to Levels.	
CO 1 Compre	ehend the fundamental principles of technical communication with sp	ecial K2
	ce to reading.	1

CO 2	Write various kinds of professional correspondence.	K5
CO 3	Recognise and produce different kinds of technical documents.	K2
CO 4	Apply effective speaking skills to communicate at the workplace.	К3
CO 5	Demonstrate their understanding of various ethical concerns in written communication.	К3

Textbook:

1. Technical Communication – Principles and Practices by Meenakshi Raman & Sangeeta Sharma, Oxford Univ. Press, 2016, New Delhi.

Reference Books:

- 1. Personality Development and Soft Skills by Barun K Mitra, Oxford Univ. Press, 2012, New Delhi.
- 2. Spoken English- A Manual of Speech and Phonetics by R K Bansal & J B Harrison, Orient Blackswan, 2013, New Delhi.
- 3. Business Correspondence and Report Writing by Prof. R C Sharma & Krishna Mohan, Tata McGraw Hill & Co. Ltd., 2001, New Delhi.
- 4. Practical Communication: Process and Practice by L U B Pandey; A.I.T.B.S. Publications India Ltd.; Krishan Nagar, 2014, Delhi.
- 5. Modern Technical Writing by Sherman, Theodore A (et.al); Apprentice Hall; New Jersey; USA.
- 6. A Textbook of Scientific and Technical Writing by S D Sharma; Vikas Publication, Delhi.
- 7. Skills for Effective Business Communication by Michael Murphy, Harvard University, USA.
- 8. A Complete Guide to Write Right by Agarwal, Deepa. Scholastic, 1st edition.
- 9. Technical writing and communication, R S Sharma, V.P. Publication, 1st edition.
- 10. Business Communication for Managers by Payal Mehra, Pearson Publication, Delhi.

		B. TECH SECOND YEAR		1
Course C	ode	ABT0401 L	T P	Credits
Course T	itle	Fermentation Engineering 3	1 0	4
Course ol	ojective:			
1	To gain	the knowledge about sterilization process in bioprocess. (K1)		
2	To enha	ance the knowledge about different fermentation processes. (K1, K3)		
3	To gain	the information about various process that control the formation of p	roduct.	(K1, K3)
4	To enha	ance the knowledge about products related to fermentation (K3)		
5	To lear	n about the optimization process for alcoholics and pharma products (K2, K3	3)
Pre-requi	sites: Kı	nowledge of microbiology		
Course C	ontents A	/ Syllabus		
UNIT-I		FERMENTATION AND ITS REQUIREMENT:	8h	
Introducti	on to su	bmerged and solid state fermentation, Microbial culture selection	for fe	rmentation
processes.	Primary	and Secondary metabolites, sterilization process, media for industria	ferme	ntation
UNIT-II		TYPE OF FERMENTATION PROCESSES:	8h	
Batch, Fe	d-batch,	continuous, Construction of fermenters, Basic function of fermen	ters, D	esign, and
operation,	scale up	of fermentation, Instrumentation and control, Aeration and agitation		
bioreactor	2			
	J.			
		MECHANISM BEHIND METABOLIC REACTION:	8h	
UNIT-III		MECHANISM BEHIND METABOLIC REACTION: ory mechanisms involved in controlling the catabolic and anabolic anabolic anabolic and anabolic anab		
UNIT-III Different microbes.	regulato	ory mechanisms involved in controlling the catabolic and anaboon, nutritional repression, carbon catabolite repression, crabtree	olic pro	ocesses o
UNIT-III Different microbes.	regulato	ory mechanisms involved in controlling the catabolic and anabo	olic pro	ocesses o

	B.TECH SECOND YEAR	
Course Code	e ABT0404 LTP	Credits
Course Title	Green Biotechnology and Pollution Abetment 2 0 0	2
Course object	etive:	
1	To gain knowledge about wastewater treatment processes.	
2	To enhance knowledge about biological degradation of xenobiotic compounds	
3	To learn about the usage of enzyme and its importance in waste treatment	
4	To learn about the various biological processes for remediation of pollutant	
5	To gain information about potential use of waste to produce energy	
Pre-requisite		
	Course Contents / Syllabus	
UNIT-I	BIOLOGICAL WASTE TREATMENT:	8h
	Taste Treatment: Biological wastewater treatment: Principles and design aspects of	_
	ent methods with advanced bioreactor configuration: Solid waste management:	
	processing of organic residues, minimal national standards for waste disposal.	ianami,
UNIT-II	BIODEGRADATION OF XENOBIOTIC COMPOUNDS:	8h
	on of Xenobiotic Compounds: Xenobiotic compounds—Definition, examples and	_
	on- Introduction, effect of chemical structure on biodegradation, recalcitrance, co m	
	ormation. Factors affecting biodegradation, microbial degradation of hydrocarbons.	ictabonsin
UNIT-III	BIOTRANSFORMATION'S AND BIOCATALYSTS:	8h
		_
	ation's and Biocatalysts: Basic organic reaction mechanism- Common prejudice	
	vantages & disadvantages of biocatalysts, isolated enzymes versus whole cell	systems,
	pplication, catalytic antibodies; stoichiometry.	01
UNIT-IV	BIOREMEDIATION AND BIORESTORATION:	8h
	on and Biorestoration: Introduction and types of bio-remediation, bioremediation	
	ge, bioremediation of subsurface material, Insitu and Ex-situ technologies, phytorer	
	f coal mines a case study. Biorestoration: reforestation through micropropagation	
1 -	in reforestation, use of microbes for improving soil fertility, reforestation	of soils
	with heavy metals.	
UNIT-V	ECO-FRIENDLY BIOPRODUCTS FROM RENEWABLE SOURCES:	8h
_	Bioproducts from Renewable Sources: Fundamentals of composting process:	
	prospects of biofuel production: bioethanol, biohydrogen and biodiesel; bioferti	
	Biotechnology in Environment Protection: Current status of biotechnology in en	vironment
	d its future, release of genetically engineered organisms in the environment.	
Course outco	ome: After completion of this course students will be able to	
CO 1	understand design aspect of various waste treatment processes	
CO 2	describe the use of biotechnological processes to handle xenobiotic compounds.	
CO 3	understand importance of enzymes and its utilization in waste treatment.	
CO 4	to describe the use of biotechnological processes to protect the environment	
CO 5	identify potential biomass sources for renewable energy generation.

		D TECH CECOND VEAD		
		B.TECH SECOND YEAR		1
Course C			<u> T P</u>	Credits
Course Ti		8, 8,	8 0 0	3
		ne purpose of the Immunology and immune technology course is t		
		knowledge of the immune response and its involvement in healt		lisease, the
process of		and application of technology in immunology and immunotherapy		
1	_	comprehensive about the basic components and functionaliti	es of th	e immune
	system.			
2		stand the Antigen and Antibody structure and function a	nd the	associated
	technolog			
3		stand the technical aspect of immunological reactions and the	ir use ir	n scientific
	research.			
4		about various ways of regulation of immune response; and crit	ically ev	aluate the
		y mechanisms and their importance in human health.		
5		ate the immunological mechanisms with various kinds of hu	man dis	seases and
	health cor	nditions.		
Pre-requi	sites:			
	T	Course Contents / Syllabus	- 1 -	
UNIT-I		ERVIEW OF THE IMMUNE SYSTEM:	8	
		nunity and immune system, Cells and Molecules of the		
-		acteristics and players of innate and adaptive immunity, Humoral		
		rimary and Secondary lymphoid organs, Structure, function a		
cytokines,	Inflammat	ion-features and Inflammatory response, Pro-inflammatory and	anti-inf	flammatory
cytokines,	T &B cell 1	maturation, activation and differentiation.		
UNIT-II	AN	FIGEN AND ANTIBODY STRUCTURE: ANTIGENS:	8	
Characteri	stics and t	ypes of Antigens, Factors affecting the immunogenicity, Hapte	ens and	adjuvants,
Epitopes,	Characterist	ics of T&B cell epitopes.		-
Antibodie	s: Structur	re, functions and characteristics of different classes of anti	bodies,	Antigenic
Determina	nts on Imm	unoglobulins, Generation of antibody diversity, Somatic hyper-mu	tation, N	Monoclonal
and polycl	onal antibo	dies and their commercial preparation, Hybridoma technology		
UNIT-III		MUNO-TECHNIQUES AND IMMUNIZATION:	8	
Antigen a	nd antibod	y interactions, cross reactivity, precipitation reactions, Immuno	logical	techniques:
serologica	l technique	es, Immuno-diffusion assay, ELISA, Immuno-blotting, RIA,	wester	n blotting.
_		uno-Histochemistry, Flow Cytometry, FACS sorting, Immuno-pred		_
	•	passive immunization, Antibodies in diagnostics Vaccines and the		
UNIT-IV		C AND REGULATION OF IMMUNE RESPONSE:	8	
		ion of MHC molecules, Antigen presenting cells, Exogenous	and F	Indogenous
		rocessing and presentation, Germinal centre, Plasma Cells, BCR si		
	- 1	and pathways, immune tolerancenegative/positive selection, TCR		
	•	s. T cell subtypes: Th1, Th2, Th17, Tregs etc. Memory B and		
	-	PD1, CTLA4, TIM3 etc. CD4 and CD8 receptors.	1 CCII	responses,
		<u> </u>	0	
UNIT-V		MUNITY AND DISEASES:	8	
		fection: autoimmunity, hypersensitivity, Transplantation immun		
	_	ecombinant antibodies, Immuno-therapy in cancer, checkpoint		•
against inf	ectious dise	eases (virus, bacteria and protozoan), AIDS, Immune response in pl	ants- an	Overview
Course ou	itcome: Aft	ter completion of this course students will be able to		
CO 1	-	and explain in a detail about the basic components a	nd K	1, K2
COI	functiona	lities of the immune system.	N	1, 114
CO 2		nd explain antigen and antibody structure and function, thus v	vill _{17.1}	1, K2

	technologies.	
CO 3	Understand the technical aspect of immunological reactions and their application in scientific research.	K2, K3
CO 4	Describe various ways of regulation of immune response; and thus, will be able to critically evaluate the regulatory mechanisms and their importance in human health.	K1, K2, K6
CO 5	Associate the immunological mechanisms with various kinds of human diseases and health conditions.	К3

Cour	rse objectiv	/e:	•			
1	To help the students in realizing the inter-relationship between man and environment. and					
	help the students in acquiring basic knowledge about environment.					
2	To develop the sense of awareness among the students about environment and its various problems.					
3	3 To create positive attitude about environment among the student.					
4	4 To develop proper skill required for the fulfilment of the aims of environmental education and educational					
	evaluations					
5	To develop	the capability of using skills to fulfil the required aims, to r	ealise and solve	environmental		

Pre-requisites: Basic knowledge of nature.

Course Contents / Syllabus

UNIT-I Basic Principle of Ecology

8 Hours

Definition, Scope and basic principles of ecology and environment. Ecosystem: Basic concepts, components of ecosystem. Food chains and food webs. Ecological pyramids, Energy flow in ecological systems, Characteristics of different ecosystems. Biogeochemical Cycles: Importance, gaseous and sedimentary cycles. Carbon, Nitrogen, Phosphorus and Sulphur Cycles.

Basic concepts of sustainable development, SDGs, Ecosystem services, UN Decade for Ecorestoration.

UNIT-II Natural Resources and Associated Problems

problems through social, political, cultural and educational processes

8 Hours

Natural resources and associated problems. Forest resources: Use and over-exploitation, deforestation. Timber extraction, mining, dams and their effects on forest and tribal people. Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources. Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity.

Land resources: Land as a resource, land degradation, man induced landslides. Equitable use of resources for sustainable lifestyles.

Non-Renewable Energy Resources: Fossil fuels and their reserves, Nuclear energy, types, uses and effects, Renewable Energy Resources: hydropower, Solar energy, geothermal, tidal and wind energy, Biomass energy, biogas and its advantages.

UNIT-III	Biodiversity	Succession	and	Non-Renewable	Energy	8 Hours
	Resources					

Biodiversity and their importance, Threats to biodiversity, major causes, extinction's, vulnerability of species to extinction, IUCN threat categories, Red data book.

Strategies for biodiversity conservation, principles of biodiversity conservation in-situ and ex-situ conservation strategies Mega diversity zones and Hot spots, concepts, distribution and importance.

Succession: Concepts of succession, Types of Succession. Trends in succession. Climax and stability.

UNIT-IV | Pollution and Solid Waste Management

8 Hours

Air pollution: sources of air pollution, Primary and secondary air pollutants. Origin and effects of SOX, NOX, Cox, CFC, Hydrocarbon, control of air pollution. Water pollution: sources and types of water pollution, Effects of water pollution, Eutrophication, Soil pollution: Causes of soil pollution, Effects of soil pollution, Major sources of and effects of noise pollution on health, Radioactive and thermal pollution sources and their effects on surrounding environment.

Solid waste disposal and its effects on surrounding environment, Climate change, global warming, acid rain, ozone layer depletion.

UNIT-V | Role of Community and Environmental Protection Acts

8 Hours

Role of community, women and NGOs in environmental protection, Bioindicators and their role, Natural hazards, Chemical accidents and disasters risk management, Environmental Impact Assessment (EIA), Salient features of following Acts: a. Environmental Protection Act, 1986, Wildlife (Protection) Act, 1972.b. Water (Prevention and control of pollution) Act, 1974.c. Air (Prevention and control of pollution) Act, 1981. Forest (Conservation) Act, 1980.d. Wetlands (Conservation and Management) Rules, 2017; e. Chemical safety and Disaster Management law. F. District Environmental Action Plan. Climate action plans.

Course outcome: After completion of this course students will be able to

CO 1	Understand the basic principles of ecology and environment. Ecosystem: Basic concepts,	K2
	components of ecosystem., food chains and food webs. Ecological pyramids	
CO 2	Understand the different types of natural recourses like food, forest, minerals and energy and	K2
	their conservation	
CO 3	Understand the importance of biodiversity, Threats of biodiversity and different methods of	K2
	biodiversity conservation.	
CO 4	Understand the different types of pollution, pollutants, their sources, effects and their control	K3
	methods	
CO 5	Understand the basic concepts of sustainable development, Environmental Impact Assessment	K3
	(EIA) and different acts related to environment

B. TECH. SECOND YEAR						
Course Code	ANC0401	L	T	P	Credit	
Course Title	Cyber Security	2	0	0	0	

Course objective:

Achieve knowledge about Security of Information system and Risk factors and examine security threats and vulnerability in various scenarios, understand concept of cryptography and encryption technique to protect the data from cyber-attackand provide protection for software and hardware.

Pre-requisites: Basics recognition in the domain of Computer Science.

Concept of network and operating system.

Commands of programming language.

Course Contents / Syllabus

UNIT-I Introduction 8 Hours

Introduction to Information Systems: Types of Information Systems, Development of Information Systems, Need for Information Security, Threats to Information Systems, Information Assurance, Guidelines for Secure Password and WI-FI Security and social media and Windows Security, Security Risk Analysis, and Risk Management.

UNIT-II Application Layer Security

8 Hours

Data Security Considerations-Backups, Archival Storage and Disposal of Data, Security Technology-Firewall, Intrusion Detection, Access Control, Security Threats -Viruses, Worms, Trojan Horse, Bombs, Trapdoors, Spoofs, E-mail Viruses, Macro Viruses, Malicious Software, Network and Denial of Services Attack, Security, Threats to E-Commerce: Electronic Payment System, e- Cash, Issues with Credit/Debit Cards.

UNIT-III Secure System Development

8 Hours

Application Development Security, Architecture & Design, Security Issues in Hardware: Data Storage and Downloadable Devices, Mobile Protection, Security Threats involving in social media, Physical Security of IT Assets, Access Control, CCTV and Intrusion Detection Systems, Backup Security Measures.

UNIT-IV Cryptography And Network Security

8 Hours

Public key cryptography: RSA Public Key Crypto with implementation in Python,Digital Signature Hash Functions,Public Key Distribution.

Symmetric key cryptography: DES (Data Encryption Standard), AES (Advanced Encryption Standard), Secure hash algorithm(SHA-1).

Real World Protocols: Basic Terminologies, VPN, Email Security Certificates, Transport Layer Security, TLS, IP security, DNS Security.

UNIT-V Security Policy

8 Hours

Policy design Task, WWW Policies, Email based Policies, Policy Revaluation Process-Corporate Policies-Sample Security Policies, Publishing and Notification Requirement of the updated and new Policies. Resent trends in security.

Course outcor	ne: At the end of course, the student will be able to	
CO 1	Analyze the cyber security needs of an organization.	K4
CO 2	Identify and examine software vulnerabilities and security solutions	K1.K3

CO 3	Comprehend IT Assets security (hardware and Software) and	K2
	performance indicators	
CO 4	Measure the performance and encoding strategies of security systems.	K3, K5
CO 5	Understand and apply cyber security methods and policies to enhance current scenario security.	K2, K3
