Mini Project or Internship (3-4 weeks) shall be conducted during summer break after II semester and will be assessed during III semester

* List of MOOCs (NPTEL) Based Recommended Courses for first year B. Tech Students

- 1. Developing Soft Skills and personality-Odd Semester-8 Weeks-3 Credits
- 2. Enhancing Soft Skills and personality-Even Semester-8 Weeks-3 Credits

* AICTE Guidelines in Model Curriculum:

After successful completion of 166 credits, a student shall be eligible to get Under Graduate degree in Engineering. A student will be eligible to get Under Graduate degree with Honours only, if he/she completes additional university recommended courses only (Equivalent to 20 credits; NPTEL Courses of 4 Weeks, 8 Weeks and 12 Weeks shall be of 2, 3 and 4 Credits respectively) through MOOCs. For registration to MOOCs Courses, the students shall follow NPTEL Site http://nptel.ac.in/ as per the NPTEL policy and norms. The students can register for these courses through NPTEL directly as per the course offering in Odd/Even Semesters at NPTEL. These NPTEL courses (recommended by the University) may be cleared during the B. Tech degree program (not necessary one course in each semester). After successful completion of these MooCs courses the students, shall, provide their successful completion NPTEL status/certificates to the University (COE) through their college of study only. The student shall be awarded Hons. Degree (on successful completion of MOOCS based 20 credit) only if he/she secures 7.50 or above CGPA and passed each subject of that Degree Programme in single attempt without any grace marks.

*Foreign Language:

- 1. AASL0202 French
- 2. AASL0203 German
- 3. AASL0204 Japanese

B.TECH FIRST YEAR					
Course	Code	AAS0101A	L T P	Credit	
Course 7	Title	Engineering Physics	3 1 0	4	
Course objective:					
1	To provide the knowledge of Relativistic Mechanics and their uses to engineering applications.				
2					
3					
4					
5	1 *	rovide the basic knowledge of Optical Fiber and Laser which is nec rstand the working of modern engineering tools and techniques.	essary to		

Pre-requisites: Newton's laws of motions, scalar and vectors, electricity and magnetism, basic laws of optics.

Course Contents / Syllabus

UNIT-I Relativistic Mechanics

8 hours

Frame of reference, Inertial & non-inertial frames, Galilean transformations, Michelson Morley experiment, Postulates of special theory of relativity, Lorentz transformations, Length contraction, Time dilation, Velocity addition theorem, Variation of mass with velocity, Einstein's mass energy relation, Relativistic relation between energy and momentum, Massless particle.

Some engineering applications(qualitative): Global positioning system (GPS), Application to Satellites.

IJNIT-II Quantum Mechanics

8 hours

Introduction to wave-particle duality, de Broglie matter waves, Phase and group velocities, Heisenberg's uncertainty principle and its applications, Wave function characteristics and significance, Time-dependent and time- independent Schrödinger's wave equations, Particle in one-dimensional rigid box, Theory of Quantum excitation of the Higgs field (Higgs Boson or GOD particle)(qualitative).

UNIT-III Wave Optics

10 hours

Coherent sources, Interference in uniform and wedge shaped thin films, Necessity of extended sources, Newton's Rings and its applications, Fraunhofer diffraction at single slit and at double slit, absent spectra, Diffraction grating, grating spectra, Rayleigh's criterion of resolution, Resolving power of grating, Optical filters.

UNIT-IV Semiconductor Physics and Information Storage

6 hours

(a) Introduction to the concept of electrical conductivity, conductivity of conductors and semiconductors, Fermi-Dirac probability distribution function, Position of Fermi level in intrinsic semiconductors and extrinsic semiconductors, variation of Fermi level with temperature (qualitative), Photovoltaic effect, working of a solar cell on the basis of band diagrams and Applications.

(b) Basics of magnetic, and semiconductor memories

UNIT-V Fiber Optics & Laser

8 hours

Fiber Optics: Introduction to fiber optics, Acceptance angle, Numerical aperture, Normalized frequency, Classification of fiber, Attenuation and Dispersion in optical fibers.

Laser: Absorption of radiation, Spontaneous and stimulated emission of radiation, Einstein's coefficients, Population inversion, Ruby Laser, He-Ne Laser.

Recent applications of optical fibers and Laser (Qualitative): Laser-guided UAV (Drone).

Course outcome: After completion of this course students will be able to:

CO 1	Solve the relativistic mechanics problems	K1,K2,K3
CO 2	Apply the concept of quantum mechanics	K1,K2,K3
CO 3	Apply the laws of optics and their application in various processes	K1,K2,K3
CO 4	Define the laws of semiconductors.	K1,K2
CO 5	Explain the working of modern engineering tools and techniques of optical fiber and laser.	K1,K2

		B. TECH FIRST YEAR			
Course Code Course Title		AASL0101		Credit	
		Professional Communication	2 0 0	02	
Course	bjecti	ve:			
1	•	The objective of the course is to ensure that the students c communicate effectively, in clear and correct English, in a appropriate to the occasion.			
2	The course provides a foundation in the four basic skills LSRW (Listening, Speaking, Reading, Writing) of language learning, aligned to an International Business English Certification.				
Pre-requ	uisites:				
gra • Al	mmatic I the stu	nt should be able to communicate in basic English and havial structures of English. dents must take an assessment exam to ascertain their level brief induction course in it.		-	
		Course Contents / Syllabus			
UNIT-I		Introduction & Reading Skills	,	7 Hours	

- Reading comprehension
- Reading texts for paraphrasing & note making; diagram, chart, picture reading
- > Critical reading of texts through suggested list of books

UNIT-II Writing Skills

10 Hours

- ➤ Vocabulary building word formation; root words, prefixes &suffixes; synonyms; antonyms; homophones; abbreviations; one-word substitutes
- > Requisites of a good sentence
- > Common errors subject-verb agreement and concord, tenses, articles, preposition; punctuation
- > Paragraph writing
- ➤ Basics of letter & email writing; notice & memo writing

UNIT-III Listening Skills

5 Hours

- Process of listening
- > Types of listening
- > Overcoming barriers to listening
- > Tips for effective listening
- > Exercises on listening skills

UNIT-IV | Speaking Skills

8 Hours

- > Skills of effective speaking
- Applied phonetics phoneme, syllable, word accent
- > Stress, rhythm& intonation in English
- ➤ Neutral accent difficulties of non-native speakers of English

> Speaking with confidence

UNIT-V Public Speaking

10 Hours

- > Components of effective speaking in the workplace
- ➤ Public speaking Kinesics, Chronemics, Proxemics
- Voice dynamics
- ➤ Basics of Presentation, PPT support
- ➤ Online Presentations & Etiquette
- > Facing an Interview

Course outcome:

At the end of the course students will be able to

CO 1	Understand the basic objective of the course and
	comprehend texts for professional reading tasks in
	preparation for an International Certification in Business
	English.
CO 2	Write professionally in simple and correct English.
CO 3	Interpret listening tasks for better professional competence.
CO 4	Recognize the elements of effective speaking with emphasis
	on applied phonetics.
CO 5	Apply the skill of speaking at the workplace.

	B. TECH. FIRST YEAR					
Lab Code	ACSE0151 L T P					
Lab Title	Problem Solving using Python Lab 0 0 2	1				
Course out	come: At the end of course, the student will be able to	<u> </u>				
CO 1	CO 1 Write simple python programs.					
CO 2	Implement python programs using decision control statements	K ₃ , K ₆				
CO 3 Writing python programs using user defined functions and modules						
CO 4 Implement programs using python data structures –lists, tuples, set, dictionaries						
CO 5	Write programs to perform input/output operations on files	K_3, K_4				

List of Experiment:

	List of Fundamental Programs	
S.N.	Program Title	Catagory
1	Python Program to print "Hello Python"	Basic
2	Python Program to read and print values of variables of different data types.	Basic
3	Python Program to perform arithmetic operations on two integer numbers	Basic
4	Python Program to Swap two numbers	Basic
5	Python Program to convert degree Fahrenheit into degree Celsius	Operators
6	Python Program to demonstrate the use of relational operators.	Operators
7	Python Program to understand the working of bitwise and logical operators.	Operators
8	Python Program to calculate roots of a quadratic equation.	Conditional
9	Python Program to check whether a year is leap year or not.	Conditional
10	Python Program to find smallest number among three numbers.	Conditional
11	Python Program to make a simple calculator.	Conditional
12	Python Program to find the factorial of an integer number.	Loop
13	Python Program to find the reverse of an integer number.	Loop
14	Python Program to find and print all prime numbers in a list.	Loop
15	Python Program to Find the Sum of 'n' Natural Numbers	Loop
16	Python Program to print sum of series: $-1/2 + 2/3 + 3/4 + \dots + n/(n+1)$	Loop
17	Python Program to print pattern using nested loop	Loop
18	Python Program to Display the multiplication Table of an Integer	Loop
19	Python Program to Print the Fibonacci sequence	Loop
20	Python Program to Check Armstrong Number	Loop
21	Python Program to Find Armstrong Number in an Interval	Loop
22	Python Program to check Using function whether a passed string is	Function
	palindrome or not	

23	Python Program using function that takes a number as a parameter, check	Function				
	whether the number is prime or not.					
24	PythonProgram using function that computes gcd of two given numbers.	Function				
25	Python Program to Find LCM of two or more given numbers.	Function				
26	Python Program to Convert Decimal to Binary, Octal and Hexadecimal	Function				
27	Python Program To Find ASCII value of a character	Basic				
28	Python Program to Display Calendar	Loop				
29	Python Program to Add Two Matrices	Loop				
30	Python Program to Multiply Two Matrices	Loop				
31	Python Program to Transpose a Matrix	Loop				
32	Python Program to Sort Words in Alphabetic Order	Sorting				
33	Python Program to Display Fibonacci Sequence Using Recursion	Recursion				
34	Python Program to Find Factorial of Number Using Recursion	Recursion				
35	Python Program that implements different string methods.	String				
36	Python Program that validates given mobile number. Number should start	String				
	with 7, 8 or 9 followed by 9 digits.					
37	Python Program to implement various methods of a list.	List				
38	Python Program that has a nested list to store toppers details. Edit the details	List				
	and reprint them.					
39	Python Program to swap two values using tuple assignment.	Tuple				
40	Python Program that has a set of words in English language and their	Dictionary				
	corresponding Hindi words. Define dictionary that has a list of words in					
	Hindi language and their corresponding Hindi Sanskrit. Take all words from					
	English language and display their meaning in both languages.					
41	Python Program that inverts a dictionary.	Dictionary				
42	Python Program that reads data from a file and calculates percentage of	File				
	white spaces, lines, tabs, vowels and consonants in that file.					
43	Python Program that fetches data from a given url and write it in a file.	File				
44	Python Program to understand the concept of Exception Handling	Exception				
		Handling				
45	Python Program to implement linear and binary search	Searching				
46	Python Program to sort a set of given numbers using Bubble sort	Sorting				
S.No.	Word Problem Experiments					
1.	String Rotation					
	Problem Description					
	Rotate a given String in the specified direction by specified magnitude.					
	After each rotation make a note of the first character of the rotated String, after all rotation					
	are performed the accumulated first character as noted previously will form another string,					
	say FIRSTCHARSTRING.	-14!				
	Check If FIRSTCHARSTRING is an Anagram of any substring of the Origina	ai string.				

If yes print "YES" otherwise "NO". Input

The first line contains the original string s. The second line contains a single integer q. The ith of the next q lines contains character d[i] denoting direction and integer r[i] denoting the magnitude.

Constraints

1 <= Length of original string <= 30

 $1 \le q \le 10$

Output

YES or NO

Explanation

Example 1

Input

carrace

3

L 2

R 2

L 3

Output

NO

Explanation

After applying all the rotations, the FIRSTCHARSTRING string will be "rcr" which is not anagram of any sub string of original string "carrace".

2. Jurassic Park

Problem Description

Smilodon is a ferocious animal which used to live during the Pleistocene epoch (2.5 mya—10,000 years ago). Scientists successfully created few smilodons in an experimental DNA research. A park is established and those smilodons are kept in a cage for visitors.

This park consists of Grasslands(G), Mountains(M) and Waterbodies(W) and it has three gates (situated in grasslands only). Below is a sample layout.

W	M	G	G	G	G
М	G	W	G	М	М
G	G	G	G	G	G
W	G	G	M	W	G

Before opening the park, club authority decides to calculate Safety index of the park. The procedure of the calculation is described below. Please help them to calculate.

Safety Index calculation

Assume a person stands on grassland(x) and a Smilodon escapes from the cage situated on grassland(y). If the person can escape from any of those three gates before the Smilodon able to catch him, then the grassland(x) is called safe else it is unsafe. A person and a

Smilodon both take 1 second to move from one area to another adjacent area(top, bottom, left or right) but a person can move only over grasslands though Smilodon can move over grasslands and mountains.

If any grassland is unreachable for Smilodon(maybe it is unreachable for any person also), to increase safe index value Club Authority use to mark those grasslands as safe land. Explained below

W	М	G	G	G	G	
М	G	W	G(x)	М	M	
G	W	G	G(y)	G	G	
W	G(z)	W	М	W	G	

For the above layout, there is only one gate at (4,6)

Y is the position of Smilodon's cage

X is not safe area

Z is a safe area as is it not possible for smilodon to reach z

Safety index=(total grassland areas which are safe*100)/total grassland area

Constraints

- i. $3 \le R, C \le 10^3$
- ii. Gates are situated on grasslands only and at the edge of the park
- iii. The cage is also situated in grassland only
- iv. The position of the cage and the position of three gates are different

Input Format

The first line of the input contains two space-separated integers R and C, denoting the size of the park (R*C)

The second line contains eight space-separated integers where

First two integers represent the position of the first gate

3rd and 4th integers represent the position of second gate

5th and 6th integers represent the position of third gate respectively

The last two integers represent the position of the cage

Next R lines, each contains space separated C number of characters. These R lines represent the park layout.

Output

Safety Index accurate up to two decimal places using Half-up Rounding method

Explanation

Example 1

Input

44

11213113

G GGG

GWWM

G G W W
M G M M
Output
75.00

3. Bank Compare

Problem Description

There are two banks; Bank A and Bank B. Their interest rates vary. You have received offers from both bank in terms of annual rate of interest, tenure and variations of rate of interest over the entire tenure.

You have to choose the offer which costs you least interest and reject the other.

Do the computation and make a wise choice.

The loan repayment happens at a monthly frequency and Equated Monthly Installment (EMI) is calculated using the formula given below:

EMI = loanAmount * monthlyInterestRate/(1 - 1 / (1

+monthlyInterestRate)^(numberOfYears * 12))

Constraints

i. $1 \le P \le 1000000$

ii. $1 \le T \le 50$

iii. $1 \le N1 \le 30$

iv. $1 \le N2 \le 30$

Input Format

First line : P – principal (Loan Amount) Second line : T – Total Tenure (in years).

Third Line: N1 is number of slabs of interest rates for a given period by Bank A. First slab starts from first year and second slab starts from end of first slab and so on.

Next N1 line will contain the interest rate and their period.

After N1 lines we will receive N2 viz. the number of slabs offered by second bank.

Next N2 lines are number of slabs of interest rates for a given period by Bank B. First slab starts from first year and second slab starts from end of first slab and so on.

The period and rate will be delimited by single white space.

Output

Your decision – either Bank A or Bank B.

Output Bank B

4. Cross Words

Problem Description

A crossword puzzle is a square grid with black and blank squares, containing clue numbers (according to a set of rules) on some of the squares. The puzzle is solved by obtaining the solutions to a set of clues corresponding to the clue numbers.

The solved puzzle has one letter in each of the blank square, which represent a sequence of letters (consisting of one or more words in English or occasionally other languages) running along the rows (called "Across", or "A") or along the columns (called "Down" or "D"). Each numbered square is the beginning of an Across solution or a Down solution. Some of the across and down solutions will intersect at a blank square, and if the solutions are consistent, both of them will have the same letter at the intersecting square.

In this problem, you will be given the specifications of the grid, and the solutions in some random order. The problem is to number the grid appropriately, and associate the answers consistently with the clue numbers on the grid, both as Across solutions and as Down solutions, so that the intersecting blank squares have the same letter in both solutions.

Rules for Clue Numbering

The clue numbers are given sequentially going row wise (Row 1 first, and then row2 and so on)

Only blank squares are given a clue number

A blank square is given a clue number if either of the following conditions exist (only one number is given even if both the conditions are satisfied)

It has a blank square to its right, and it has no blank square to its left (it has a black square to its left, or it is in the first column). This is the beginning of an Across solution with that number

It has a blank square below it, and no blank square above it (it has a black square above it or it is in the first row). This is the beginning of a Down solution with that number

Constraints

- i. 5<=N<=15
- ii. 5<=M<=50

Input Format

The input consists of two parts, the grid part and the solution part

The first line of the grid part consists of a number, N, the size of the grid (the overall grid is N x N) squares. The next N lines correspond to the N rows of the grid. Each line is comma separated, and has number of pairs of numbers, the first giving the position (column) of the beginning of a black square block, and the next giving the length of the

block. If there are no black squares in a row, the pair "0,0" will be specified. For example, if a line contains "2,3,7,1,14,2", columns 2,3,4 (a block of 3 starting with 2), 7 (a block of 1 starting with 7) and 14,15 (a block of 2 starting with 14) are black in the corresponding row.

The solution part of the input appears after the grid part. The first line of the solution part contains M, the number of solutions. The M subsequent lines consist of a sequence of letters corresponding to a solution for one of the Across and Down clues. All solutions will be in upper case (Capital letters)

Output

The output is a set of M comma separated lines. Each line corresponds to a solution, and consists of three parts, the clue number, the letter A or D (corresponding to Across or Down) and the solution in to that clue (in upper case)

The output must be in increasing clue number order. If a clue number has both an Across and a Down solution, they must come in separate lines, with the Across solution coming before the Down solution.

5. Skateboard

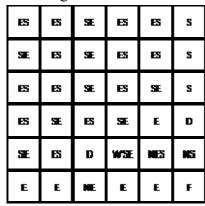

Problem Description

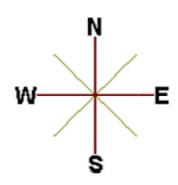

The amusement park at Patagonia has introduced a new skateboard competition. The skating surface is a grid of N x N squares. Most squares are so constructed with slopes that

it is possible to direct the skateboard in any of up to three directions of the possible four (North ,East, South or West, represented by the letters N, E, S and W respectively). Some squares however have a deep drop from the adjacent square from which it is impossible to go to any adjacent square. These are represented by D (for Drop) in that square. The objective is to maneuver the skateboard to reach the South East corner of the grid, marked F.

Each contestant is given a map of the grid, which shows where the Drop squares are (marked D), where the Final destination is (marked F), and, for each other square, the directions it is possible to maneuver the skateboard in that square.

The contestant draws lots to determine which of the squares on the boundaries of the grid on the North or the West of the grid (the top or the left in the diagram) he or she should start in. Then, using a map of the grid, he or she needs to try to reach the South East corner destination by maneuvering the skateboard.

In some cases, it is impossible to reach the destination. For example, in the diagram above, if one starts at the North East corner (top right in the diagram), the only way is to go is South, until the Drop square is reached (three squares South), and the contestant is stuck there.

A contestant asks you to figure out the number of squares at the North or West boundary (top or left boundary in the map) from which it is feasible to reach the destination.

Constraints

Input Format

The first line of the input is a positive integer N, which is the number of squares in each side of the grid.

The next N lines have a N strings of characters representing the contents of the map for that corresponding row. Each string may be F, representing the Final destination, D, representing a drop square, or a set of up to three of the possible four directions (N,E,S,W) in some random order. These represent the directions in which the contestant can

maneuver the skateboard when in that square.

Output

The output is one line with the number of North or West border squares from which there is a safe way to maneuver the skateboard to the final destination.

6. Chakravyuha

Problem Description

During the battle of Mahabharat, when Arjuna was far away in the battlefield, Guru Drona made a Chakravyuha formation of the Kaurava army to capture YudhisthirMaharaj. Abhimanyu, young son of Arjuna was the only one amongst the remaining Pandava army who knew how to crack the Chakravyuha. He took it upon himself to take the battle to the enemies.

Abhimanyu knew how to get power points when cracking the Chakravyuha. So great was his prowess that rest of the Pandava army could not keep pace with his advances. Worried at the rest of the army falling behind, YudhisthirMaharaj needs your help to track of Abhimanyu's advances. Write a program that tracks how many power points Abhimanyu has collected and also uncover his trail

A Chakravyuha is a wheel-like formation. Pictorially it is depicted as below

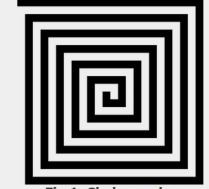

Fig 1. Chakravyuha

A Chakravyuha has a very well-defined co-ordinate system. Each point on the co-ordinate system is manned by a certain unit of the army. The Commander-In-Chief is always

located at the centre of the army to better co-ordinate his forces. The only way to crack the Chakravyuha is to defeat the units in sequential order.

A Sequential order of units differs structurally based on the radius of the Chakra. The radius can be thought of as length or breadth of the matrix depicted above. The structure i.e. placement of units in sequential order is as shown below

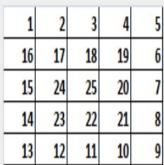

Fig 2. Army unit placements in Chakravyuha of size 5

The entry point of the Chakravyuha is always at the (0,0) co-ordinate of the matrix above. This is where the 1st army unit guards. From (0,0) i.e. 1st unit Abhimanyu has to march towards the center at (2,2) where the 25th i.e. the last of the enemy army unit guards. Remember that he has to proceed by destroying the units in sequential fashion. After destroying the first unit, Abhimanyu gets a power point. Thereafter, he gets one after destroying army units which are multiples of 11. You should also be a in a position to tell YudhisthirMaharaj the location at which Abhimanyu collected his power points.

Input Format:

First line of input will be length as well as breadth of the army units, say N

Output Format:

- Print NxN matrix depicting the placement of army units, with unit numbers delimited by (\t) Tab character
- Print Total power points collected
- Print coordinates of power points collected in sequential fashion (one per line)
- Constraints: $0 < N \le 100$

Sample Input and Output

7. Exam Efficiency

Problem Description

In an examination with multiple choice questions, the following is the exam question pattern.

- X1 number of One mark questions, having negative score of -1 for answering wrong
- X2 number of Two mark questions, having negative score of -1 and -2 for one or both options wrong
- X3 number of Three mark questions, having negative score of -1, -2 and -3 for one, two or all three options wrong
- Score Required to Pass the exam : Y
- For 1,2 and 3 mark questions, 1,2 and 3 options must be selected. Simply put, once has to attempt to answer all questions against all options.

Identify the minimum accuracy rate required for each type of question to crack the exam. Calculations must be done up to 11 precision and printing up to 2 digit precision with ceil value

Input Format:

First line contains number of one mark questions denoted by X1,

Second line contains number of two mark questions denoted by X2

Third line contains number of three mark questions denoted by X3

Fourth line contains number of marks required to pass the exam denoted by Y.

Output Format:

Minimum Accuracy rate required for one mark question is 80%

Minimum Accuracy rate required for Two mark question is 83.33%

Minimum Accuracy rate required for Three mark question is 90%

Note: - If the mark required to pass the exam can be achieved by attempting without attempting any particular type of question then show message similar to, One mark question need not be attempted, so no minimum accuracy rate applicable

Sample Input and Output

S.No.	Input	Output	Explanation

1	20	One mark questions need not be	If one got full marks in two

8. Calculate Salary and PF

Problem Description

Calculate the Final Salary & Final Accumulated PF of an Employee working in ABC Company Pvt. Ltd. The Company gives two Increments (i.e. Financial Year Increment & Anniversary Increment) to an Employee in a Particular Year.

The Employee must have Completed 1 Year to be Eligible for the Financial Year Increment. The Employee who are joining in the month of Financial Year Change (i.e. April) are considered as the Luckiest Employee's, because after completion of 1 Year, they get Two Increments

(Financial Year Increment & Anniversary Increment).

Rate of Interest for the Financial Year Increment = 11%.

Rate of Interest for the Anniversary Increment = 12%.

From 4th Year, the Financial Year Increment will be revised to 9%.

From 8th Year, the Financial Year Increment will be revised to 6%.

The Company is giving special Increment for the Employee who have completed 4 years & 8 years respectively.

So, the Anniversary Increment of the Employee for the 4th Year will be 20% and the Anniversary Increment of the Employee for the 8th year will be 15%.

Calculate the Final Salary after N number of Years as well as Calculate the Accumulated PF of the Employee after N number of Years.

Please Note that, the Rate of Interest for calculating PF for a Particular Month is 12%. Moreover, take the upper Limit of the amount if it is in decimal (For e.g. - If any Amount

turns out to be 1250.02, take 1251 for the Calculation.)

Input Format:

- i. Joining Date in dd/mm/yy format
- ii. Current CTC.
- iii. Number of Years for PF & Salary Calculation.

Output Format:

- i. Salary after the Specified Number of Years (i.e. CTC after N number of Years) in the following format
 Final Salary =
- ii. Accumulated PF of the Employee after N number of Years in the following format

Final Accumulated PF =

Constraints:

Calculation should be done upto 11-digit precision and output should be printed with ceil value

Sample Input and Output

S.No.	Input	Output
1	5	Final Salary = 13924
	01/01/2016	Final Accumulated PF = 2665
	10000	
	2	
2	19/01/2016	Final Salary = 14718
	6500	Final Accumulated PF = 4343
	4	

9. ISL Schedule

Problem Description

The Indian Soccer League (ISL) is an annual football tournament.

The group stage of ISL features N teams playing against each other with following set of rules:

- i. N teams play against each other twice once at Home and once Away
- ii. A team can play only one match per day
- iii. A team cannot play matches on consecutive days
- iv. A team cannot play more than two back to back Home or Away matches
- v. Number of matches in a day has following constraints
 - a. The match pattern that needs to be followed is -
 - Day 1 has two matches and Day 2 has one match,
 - Day 3 has two matches and Day 4 has one match and so on
 - b. There can never be 3 or more matches in a day
- vi. Gap between two successive matches of a team cannot exceed floor(N/2) days where floor is the mathematical function floor()
- vii. Derby Matches (any one)

- a. At least half of the derby matches should be on weekend
- b. At least half of the weekend matches should be derby matches

Your task is to generate a schedule abiding to above rules.

Input Format:

First line contains number of teams (N).

Next line contains state ID of teams, delimited by space

Output Format:

Match format: Ta-vs-Tb

where Ta is the home team with id a and Tb is the away team with id b.

For each day print the match(es) in following format:-

Two matches:- "#D Ta-vs-Tb Tm-vs-Tn"

One match:- "#D Tx-vs-Ty"

where D is the day id and [a, b, m, n, x, y] are team ids.

Constraints:

i.
$$8 \le N \le 100$$

Note:

- Team ids are unique and have value between 1 to N
- Day id starts with 1
- Every 6th and 7th day are weekends
- Derby is a football match between two teams from the same state

Sample Input and Output

S.No.	Input	Output
1	8	#1 T1-vs-T6 T3-vs-T5
	12543166	#2 T7-vs-T4
		#3and so on

Note: - There can be multiple correct answers for the same test cases. For better understanding of test case refer this PDF. This PDF contains one of the correct answer for a test case.

Explanation:

There are 8 teams with following information: -

Team ID	1	2	3	4	5	6	7	8
State ID	1	2	5	4	3	1	6	6

10. Longest Possible Route

Problem Description

Given an MxN matrix, with a few hurdles arbitrarily placed, calculate the cost of longest possible route from point A to point B within the matrix.

Input Format:

- i. First line contains 2 numbers delimited by whitespace where, first number M is number of rows and second number N is number of columns
- ii. Second line contains number of hurdles H followed by H lines, each line will contain one hurdle point in the matrix.
- iii. Next line will contain point A, starting point in the matrix.
- iv. Next line will contain point B, stop point in the matrix.

Output Format:

Output should display the length of the longest route from point A to point B in the matrix.

Constraints:

- i. The cost from one position to another will be 1 unit.
- ii. A location once visited in a particular path cannot be visited again.
- **iii.** A route will only consider adjacent hops. The route cannot consist of diagonal hops.
- iv. The position with a hurdle cannot be visited.
- v. The values MxN signifies that the matrix consists of rows ranging from 0 to M-1 and columns ranging from 0 to N-1.
- vi. If the destination is not reachable or source/ destination overlap with hurdles, print cost as -1.

Sample Input and Output

S. No.	Input	Output	Explanation
1	3 10	24	Here matrix will be of size 3x10 matrix with a hurdle at
	3		(1,2), $(1,5)$ and $(1,8)$ with starting point A $(0,0)$ and stop point
	1 2		B(1,7)
	1 5		
	1 8		3 10
	0 0		3 (no. of hurdles)
	1 7		1 2
			1 5
			1 8
			0 0 (position of A)
			1 7 (position of B)
			(->) count is 24. So final answer will be 24. No other route
			longer than this one is possible in this matrix.
2	2 2	-1	No path is possible in this 2*2 matrix so answer is -1
	1		
	0 0		
	1 1		
	0 0		

11. Min Product array Problem Description

The task is to find the minimum sum of Products of two arrays of the same size, given that k modifications are allowed on the first array. In each modification, one array element of the first array can either be increased or decreased by 2.

Note- the product sum is Summation (A[i]*B[i]) for all i from 1 to n where n is the size of both arrays

Input Format:

- i. First line of the input contains n and k delimited by whitespace
- ii. Second line contains the Array A (modifiable array) with its values delimited by spaces
- iii. Third line contains the Array B (non-modifiable array) with its values delimited by spaces

Output Format:

Output the minimum sum of products of the two arrays

Constraints:

- i. $1 \le N \le 10^5$
- ii. $0 \le |A[i]|, |B[i]| \le 10^5$
- iii. $0 \le K \le 10^9$

Sample Input and Output

S.No.	Input	Output
1	3 5	-31
	1 2 -3	
	-2 3 -5	
2	5 3	25
	2 3 4 5 4	
	3 4 2 3 2	

Explanation for sample 1:

Here total numbers are 3 and total modifications allowed are 5. So we modified A[2], which is -3 and increased it by 10 (as 5 modifications are allowed). Now final sum will be (1 * -2) + (2 * 3) + (7 * -5)

$$-2 + 6 - 35$$

-31

-31 is final answer.

Explanation for sample 2:

Here total numbers are 5 and total modifications allowed are 3. So we modified A[1], which is 3 and decreased it by 6 (as 3 modifications are allowed).

Now final sum will be

25 is final answer.

12. Consecutive Prime Sum

Problem Description

Some prime numbers can be expressed as a sum of other consecutive prime numbers. For example, 5 = 2 + 3, 17 = 2 + 3 + 5 + 7, 41 = 2 + 3 + 5 + 7 + 11 + 13. Your task is to find out how many prime numbers which satisfy this property are present in the range 3 to N subject to a constraint that summation should always start with number 2.

Write code to find out the number of prime numbers that satisfy the above-mentioned property in a given range.

S.	Input	Output	Comment
No.			
1	20	2	(Below 20, there are 2 such members: 5 and 17) $5 = 2+3$ $17 = 2+3+5+7$
2	15	1	

Input Format:

First line contains a number N

Output Format:

Print the total number of all such prime numbers which are less than or equal to N.

Constraints:

2<N<=12.000.000.000

13. kth largest factor of N

Problem Description

A positive integer d is said to be a factor of another positive integer N if when N is divided by d, the remainder obtained is zero. For example, for number 12, there are 6 factors 1, 2, 3, 4, 6, 12. Every positive integer k has at least two factors, 1 and the number k itself. Given two positive integers N and k, write a program to print the kth largest factor of N.

Input Format:

The input is a comma-separated list of positive integer pairs (N, k)

Output Format:

The kth highest factor of N. If N does not have k factors, the output should be 1.

Constraints:

1 < N < 10000000000. 1 < k < 600. You can assume that N will have no prime factors which are larger than 13.

Example 1

Input:

12,3

Output:

4

Explanation:

N is 12, k is 3. The factors of 12 are (1,2,3,4,6,12). The highest factor is 12 and the third largest factor is 4. The output must be 4

14. Coins Distribution Question (or Coins Required Question)

Problem Description

Find the minimum number of coins required to form any value between 1 to N, both inclusive. Cumulative value of coins should not exceed N. Coin denominations are 1 Rupee, 2 Rupee and 5 Rupee.

Let's understand the problem using the following example. Consider the value of N is 13, then the minimum number of coins required to formulate any value between 1 and 13, is 6. One 5 Rupee, three 2 Rupee and two 1 Rupee coins are required to realize any value between 1 and 13. Hence this is the answer.

However, if one takes two 5 Rupee coins, one 2 rupee coins and two 1 rupee coins, then to all values between 1 and 13 are achieved. But since the cumulative value of all coins equals 14, i.e., exceeds 13, this is not the answer.

Input Format

A single integer value

Output Format

Four Space separated Integer Values

1st – Total Number of coins

2nd – number of 5 Rupee coins.

3rd – number of 2 Rupee coins.

4th – number of 1 Rupee coins.

Constraints

0<n<1000

Sample Input:

13

Sample Output:

6132

S. NO.	Debugging Experiments
1.	Write error/output in the following code.
	# aha my
	# abc.py
	deffunc(n):
	return n + 10
	func('Hello')
2.	Write the output of the following code.

```
if not a or b:
         print 1
       elif not a or not b and c:
         print 2
       elif not a or b or not b and a:
         print 3
       else:
         print 4
       Write error/output in the following code.
3.
       count = 1
       defdoThis():
          global count
         for i in (1, 2, 3):
            count += 1
       doThis()
       print count
4.
       Write the output of the following code.
       check1 = ['Learn', 'Quiz', 'Practice', 'Contribute']
       check2 = check1
       check3 = check1[:]
       check2[0] = 'Code'
       check3[1] = 'Mcq'
       count = 0
       for c in (check1, check2, check3):
         if c[0] == 'Code':
            count += 1
         if c[1] == 'Mcq':
            count += 10
       print count
       What is the output of the following program?
5.
```

```
D = dict()
       for x in enumerate(range(2)):
          D[x[0]] = x[1]
          D[x[1]+7] = x[0]
       print(D)
6.
       What is the output/error in the following program?
       D = \{1: 1, 2: '2', '1': 1, '2': 3\}
       D['1'] = 2
       print(D[D[D[str(D[1])]])
       What is the output/error in the following program?
7.
       D = \{1 : \{'A' : \{1 : "A"\}, 2 : "B"\}, 3 : "C", 'B' : "D", "D" : 'E'\}
       print(D[D[D[1][2]]], end = " ")
       print(D[D[1]["A"][2]])
       What is the output/error in the following program?
8.
       D = dict()
       for i in range (3):
          for j in range(2):
            D[i] = j
       print(D)
       What is the output/error in the following program?
9.
       x = ['ab', 'cd']
       for i in x:
       x.append(i.upper())
       print(x)
10.
       What is the output/error in the following program?
       i = 1
       while True:
          if i\%3 == 0:
            break
          print(i)
       i + = 1
```

Course Code	AAS0203	L	T	P	Credit	
Course Title	ENGINEERING MATHEMATICS-II	3	1	0	4	

Course objective: The objective of this course is to familiarize the engineering students with techniques of solving Ordinary Differential Equations, Fourier series expansion, Laplace Transform and vector calculus and its application in real world. It aims to equip the students with adequate knowledge of mathematics that will enable them in formulating problems and solving problems analytically.

Pre-requisites:Knowledge of Engineering Mathematics –I and Mathematics upto 12th standard.

Course Contents / Syllabus

UNIT-I Ordinary Differential Equation of Higher Order

10 hours

Linear differential equation of nth order with constant coefficients, Cauchy-Euler equation, Simultaneous lineardifferential equations, Second order linear differential equations with variable coefficients, Solution by changing independent variable, Reduction of order, Normal form, Method of variation of parameters, Series solutions (Frobenius Method).

UNIT-II Sequences and series

8 hours

Definition of Sequence and series with examples, Convergence of sequence and series, Tests for convergence of series, (Ratio test, D' Alembert's test, Raabe's test). Fourier series, Half range Fourier sine and cosine series.

UNIT-III Laplace Transform

8 hours

Laplace transform, Existence theorem, Laplace transforms of derivatives and integrals, Initial and final value theorems, Unit step function, Dirac- delta function, Laplace transform of periodic function, Inverse Laplace transform, Convolution theorem, Application to solve simple linear and simultaneous differential equations.

UNIT-IV Vector Calculus

8 hours

Vector differentiation: Gradient, Curl and Divergence and their Physical interpretation, Directional derivatives, Tangent and Normal planes.

Vector Integration: Line integral, Surface integral, Volume integral, Gauss's Divergence Theorem, Green's theorem, Stoke's theorem (without proof) and their applications.

UNIT-V Aptitude-II

8 hours

Ratio, Proportion & Partnership, Problem of ages, Allegation & Mixture, Direction, Blood relation, Simple & Compound interest

Course outcome: After completion of this course students are able to:

CO 1	Apply the concept of differentiation to solve differential equations.	K ₃

CO 2	Apply the concept of convergence of sequence and series to	K ₃
	evaluate Fourier series	
CO 3	Apply the Laplace transform to solve ordinary differential	K_3
	equations	
CO 4	Apply the concept of vector calculus to evaluate line, surface and	K ₃
	volume integrals.	
CO 5	Solve the problems of Proportion & Partnership, Problem of ages,	K ₃
	Allegation & Mixture, Direction, Blood relation, Simple &	
	Compound interest

BTECH FIRST YEAR							
Course Code	ACSE0203	L	T	P	Credits		
Course Title	Design Thinking I	3	1	0	4		
G 01.4					<u> </u>		

Course Objectives:

The objective of this course is to familiarize students with design thinking process as a tool for breakthrough innovation. It aims to equip students with design thinking skills and ignite the minds to create innovative ideas, develop solutions for real-time problems.

Pre-requisites: None

Course Contents / Syllabus

UNIT-I Introduction 8 HOURS

Introduction to design thinking, traditional problem solving versus design thinking, history of design thinking, wicked problems. Innovation and creativity, the role of innovation and creativity in organizations, creativity in teams and their environments, design mindset. Introduction to elements and principles of design, 13 Musical Notes for Design Mindset, Examples of Great Design, Design Approaches across the world

UNIT-II Ethical Values and Empathy

8 HOURS

Understanding humans as a combination of I (self) and body, basic physical needs up to actualization, prosperity, the gap between desires and actualization. Understanding culture in family, society, institution, startup, socialization process. Ethical behavior: effects on self, society, understanding core values and feelings, negative sentiments and how to overcome them, definite human conduct: universal human goal, developing human consciousness in values, policy, and character. Understand stakeholders, techniques to empathize, identify key user problems. Empathy tools- Interviews, empathy maps, emotional mapping, immersion and observations, customer journey maps, and brainstorming, Classifying insights after Observations, Classifying Stakeholders, Do's &Don'ts for Brainstorming, Individual activity- 'Moccasin walk'

UNIT-III Problem Statement and Ideation

10 HOURS

Defining the problem statement, creating personas, Point of View (POV) statements. Research-identifying drivers, information gathering, target groups, samples, and feedbacks. Idea Generation-basic design directions, Themes of Thinking, inspirations and references, brainstorming, inclusion, sketching and presenting ideas, idea evaluation, double diamond approach, analyze – four W's, 5 why's, "How Might We",Defining the problem using Ice-Cream Sticks, Metaphor & Random Association Technique, Mind-Map,ideation activity games - six thinking hats, million-dollar idea, introduction to visual collaboration and brainstorming tools - Mural, JamBoard.

UNIT-IV | Critical Thinking

6 HOURS

Fundamental concepts of critical thinking, the difference between critical and ordinary thinking, characteristics of critical thinkers, critical thinking skills- linking ideas, structuring arguments, recognizing incongruences, five pillars of critical thinking, argumentation versus rhetoric, cognitive

bias, tribalism, and politics. Case study on applying critical thinking on different scenarios.

UNIT-V Logic and Argumentation

8 HOURS

The argument, claim, and statement, identifying premises and conclusion, truth and logic conditions, valid/invalid arguments, strong/weak arguments, deductive argument, argument diagrams, logical reasoning, scientific reasoning, logical fallacies, propositional logic, probability, and judgment, obstacles to critical thinking. Group activity/role plays on evaluating arguments

Course outcome: After completion of this course, students will be able to

	-	
CO 1	Develop a strong understanding of the design process and apply it in a variety of business settings	K2,K3
CO 2	Analyze self, culture, teamwork to work in a multidisciplinary environment and exhibit empathetic behavior	K3
CO 3	Formulate specific problem statements of real time issues and generate innovative ideasusing design tools	K3,K6
CO 4	Apply critical thinking skills in order to arrive at the root cause from a set of likely causes	K3
CO 5	Demonstrate an enhanced ability to apply design thinking skills for evaluation of claims and arguments	K3,K4

7 Hours

Everyday Common Simple Sentences

blond/ rouge/ sympa)

UNIT-III

- ➤ In the city/ naming places and buildings
- > Means of transport / basic directions
- > Listen to, understand, and respond to everyday conversation
- > Respond to questions about ourselves and family members
- > Use the singular and plural of regular nouns (-s).

UNIT-IV	Reading	10 Hours

- > Food, drink, groceries and meal
- ➤ Everyday life/ telling time
- > Making appointments
- > Use definite and indefinite articles.

UNIT-V Writing 8 Hours

- >> Fill in a simple form (fiched'inscription/carte d'identité)
- > Describe pictures (Speak and Write)
- > Write a short text on oneself

Course outcome

At the end of the course students will be able to

CO 1	Recognize the basic sounds, letters, numbers, words and phrases of French.	
CO 2	Develop basic French vocabulary	
CO 3	Use simple phrases in real life conversations	
CO 4	Read simple sentences	
CO 5	Write simple sentences and fill in a form	

	B.TECH FIRST YEAR (Foreign Language)			
Course Code	AASL0203	T P	Credit	
Course Title	German 2	0 0	02	
Course objec	tive:			
An introduction to German language and culture. Students will learn to understand and articulate in day to day real-life situations.				
2	The course provides a foundation in the four basic ski (Listening, Speaking, Reading, and Writing) of langual learning.			
Pre-requisite The stude	s: ent should be able to communicate in basic English.			
	Course Contents / Syllabus			
UNIT-I	Introduction to German	5 Ho	5 Hours	
> Introduci	ng ourselves and others,			
➤ Gramma:	r: W questions,			
> personal	pronouns,			
➤ simple se	entence,			
➤ verb con	ugation	<u>, </u>		
UNIT-II	Vocabulary building	6	Hours	
> Vocabula	ary building – the alphabet,			
➤ hobbies,				
> numbers	, months, seasons			
➤ Gramma	r: articles, singular and plural forms			
UNIT-III	Everyday common simple sentences	5	Hours	
means of transp Grammar: defin	ing places and buildings, ort, basic directions ite and indefinite articles; and nicht; imperative			
UNIT-IV	Reading	7	Hours	

food, drink, family / groceries and meals

Grammar: the accusative

Everyday life, telling time, making appointments

Grammar: prepositions am, um, von. bis; modal verbs, possessive articles

Leisure activity, celebrations

Grammar: separable verbs, the accusative, past tense of to have and to be

UNIT-V Writing 7 Hours

Contacts, filling basic information and forms

Grammar: dative

A short text about oneself. Grammar: changing prepositions

Professions

Grammar: perfect tense Clothes Health and the body Grammar: perfect tense and dative

Grammar: the imperative and modal verbs

Course outcome:

At the end of the course students will be able to

CO 1	CO 1 Understand and be familiar with basic German and the culture			
CO 2 Recognise the foundational vocabulary				
CO 3 Use simple phrases in everyday conversations				
CO 4	Read simple sentences			
CO 5	Write simple sentences			
Text books

B.TECH FIRST YEAR (Foreign Language)						
Course Code AASL0204 L T P C				Credit		
Course Title		Japanese	2 0 0	02		
Course objectiv	e:		·			
1		An introduction to Japanese language and culture. Students will learn to understand and articulate in day to day real-life situations.				
2	The course provides a foundation in the four basic skills LSRW (Listening, Speaking, Reading, and Writing) of language learning.					

Pre-requisites:

The student should be able to communicate in basic English.

The student should be keen to learn the language.

Course Contents / Syllabus			
UNIT-I	Introduction to Japanese	8 Hours	

Introduction to Japanese alphabet (Hirangana), phonetics and pronunciation.

- Introducing ourselves and others,
- Introduction to Japanese Language
- Types of Japanese scripts- HIRANGANA, KATAKANA,
- Basic pronunciation rules
- Time and numbers telling and asking the time, counting cardinal numbers,
- Grammar different types of verbs, nouns number & gender, pronouns, present and simple past tense.

UNIT-II Vocabulary building 8 Hours

Use simple sentences to answer basic personal questions

- Expressing gratitude
- Invitations
- Talking about plans
- Holidays
- Hotels & restaurants
- Town & country

Word order - sentence, question, negative

77 OT G OT G OT	senience, question, negative	
UNIT-III	Everyday common simple sentences	8 Hours

- Customer and shopkeeper
- Making a request
- Home/ Relatives/ Fruits/ Vegetables/Animals Grammar- Singular vs. Plural Question formation

UNIT-IV Reading 8 Hours

- Transportation
- Week /Month names
- Shopping

Basic Japanese grammar rules – particles: \mathfrak{D} (ka), \mathfrak{L} (wa), \mathfrak{O} (no), \mathfrak{L} (to), \mathfrak{T} (o), \mathfrak{L} (ni), \mathfrak{L} (mo), \mathfrak{D} (ga), \mathfrak{D} (ya).

Grammar- Present, Past, Future

UNIT-V Writing 8 Hours

• Write short text on oneself

Grammar- Pronouns – subject, object, possessive, Modal verbs

Course outcome:

At the end of the course students will be able to

CO1	understand the basics of Japanese Language and its script.
CO2	recognise the foundational vocabulary.
CO3	use simple phrases in everyday conversations.
CO4	read simple sentences.
CO5	write simple sentences
