NOIDA INSTITUTE OF ENGINEERING & TECHNOLOGY, GREATER NOIDA (An Autonomous Institute)

B. TECH (DS)

AICTE Guidelines in Model Curriculum:

A student will be eligible to get Under Graduate degree with Honours only, if he/she completes the additional MOOCs courses such as Coursera certifications, or any other online courses recommended by the Institute (Equivalent to 20 credits). During Complete B.Tech. Program Guidelines for credit calculations are as follows.

- 1. For 6 to 12 Hours =0.5 Credit
- 2. For 13 to18 =1 Credit
- 3. For 19 to 24 =1.5 Credit
- 4. For 25 to 30 =2 Credit
- 5. For 31 to 35 = 2.5 Credit
- 6. For 36 to 41 =3 Credit
- 7. For 42 to 47 =3.5 Credit
- 8. For 48 and above =4 Credit

For registration to MOOCs Courses, the students shall follow Coursera registration details as per the assigned login and password by the Institute these courses may be cleared during the B. Tech degree program (as per the list provided). After successful completion of these MOOCs courses, the students shall provide their successful completion status/certificates to the Controller of Examination (COE) of the Institute through their coordinators/Mentors only.

The students shall be awarded Honours Degree as per following criterion.

- i. If he / she secures 7.50 as above CGPA.
- ii. Passed each subject of that degree program in the single attempt without any grace.
- iii. Successful completion of MOOCs based 20 credits.

Tree. Graphs: Definition and terminology, Representation of Graphs, Various types of Graphs, Connectivity, Isomorphism and Homeomorphism of Graphs, Euler and Hamiltonian Paths, Graph Coloring **Course outcome:** After completion of this course students will be able to: Apply the basic principles of sets, relations & functions and mathematical induction in K3 **CO1** computer science & engineering related problems. Understand the algebraic structures and its properties to solve complex problems. K2 **CO2** Describe lattices and its types and apply Boolean algebra to simplify digital circuit. K2, K3 **CO3 CO4** Infer the validity of statements and construct proofs using predicate logic formulas. K3, K5 Design and use the non-linear data structure like tree and graphs to solve real world K3, K6 **CO5** problems. **Text books:** 1) B. Kolman, R.C. Busby, and S.C. Packages: Introduction and Types, Access Protection in Packages, Import and Execution of Packages.

Exception Handling, Assertions and Localizations: Introduction and Types, Exceptions vs. Errors, Handling of Exception. Finally, Throws and Throw keyword, Multiple Catch Block, Nested Try and Finally Block, Tokenizer. Assertions and Localizations Concepts and its working.

String Handling: Introduction and Types, Operations, Immutable String, Method of String class, String Buffer and String Builder class.

UNIT-IV Concurrency in Java and I/O Stream	8 Hours
--	---------

Threads: Introduction and Types, Creating Threads, Thread Life-Cycle, Thread Priorities, Daemon Thread, Runnable Class, Synchronizing Threads.

I/O Stream: Introduction and Types, Common I/O Stream Operations, Interaction with I/O Streams Classes.

Annotations: Introduction, Custom Annotations and Applying Annotations.

UNIT-V	GUI Programming, Generics and Collections	8 Hours
--------	--	---------

GUI Programming: Introduction and Types, Swing, AWT, Components and Containers, Layout Managers and User-Defined Layout and Event Handling.

Generics and Collections: Introduction, Using Method References, Using Wrapper Class, Using Lists, Sets, Maps and Queues, Working with Generics.

Course outcome: After completion of this course students will be able to:

CO1	Identify the concepts of object-oriented programming and relationships among them needed in modeling.	K2
CO2	Demonstrate the Java programs using OOP principles and also implement the concepts of lambda expressions.	К3
CO3	Implement packages with different protection level resolving namespace collision and evaluate the error handling concepts for uninterrupted execution of Java program.	K3, K5
CO4	Implement Concurrency control, I/O Streams and Annotations concepts by using Java program.	К3
CO5	Design and develop the GUI based application, Generics and Collections in Java programming language to solve the real-world problem.	K6

Operations on a Linked List: Insertion, Deletion, Traversal, Reversal, Searching, Polynomial Representation and Addition of Polynomials.

Implementation of Stack and Queue using Linked lists.

UNIT-IV Trees 8 Hours

Basic terminology used with Tree, Binary Trees, Binary Tree Representation: Array Representation and Pointer (Linked List) Representation, Binary Search Tree, Strictly Binary Tree, Complete Binary Tree, An Extended Binary Trees.

Tree Traversal algorithms: In-order, Pre-order and Post-order. Constructing Binary Tree from given Tree Traversal, Operation of Insertion, Deletion, Searching & Modification of data in Binary Search tree, Binary Heaps, Heap sort, Threaded Binary trees, Traversing Threaded Binary trees, AVL Tree, B-Tree & Binary Heaps, Heap sort.

UNIT-V	Graphs and File Structure	8 Hours

Graphs: Terminology used with Graph, Data Structure for Graph Representations: Adjacency matrices, Adjacency List.

Graph Traversal: Depth First Search and Breadth First Search. Connected Component, Spanning Trees, Minimum Cost Spanning Trees: Prim's and Kruskal's algorithm. Transitive Closure and Shortest Path algorithms: Dijkstra Algorithm.

File Structure: Concepts of files, records and files, Sequential, Indexed and Random File Organization, Indexing structure for index files, hashing for direct files, Multi-Key file organization and Access Methods.

Course outcome: After completion of this course students will be able to:

CO 1	Describe the need of data structure and algorithms in problem solving and analyze	K2, K4
	Time space trade-off.	
CO 2	Describe how arrays are represented in memory and how to use them for	K2, K6
	implementation of matrix operations, searching and sorting along with their	
	computational efficiency.	
CO 3	Compare and contrast the advantages and disadvantages of linked lists over arrays	K4, K6
	and implement operations on different types of linked list.	
CO 4	Design, implement and evaluate the real-world applications using stacks, queues and	K5, K6
	non-linear data structures.	
CO 5	Identify and develop the alternative implementations of data structures with respect	K1, K3,
	to its performance to solve a real-world problem.	K5, K6

7.	Write a J	AVA program to display Fibonacci series.	8	CO1
8.		AVA program to implement class mechanism. Create a class, and invoke them inside main method.	-	CO2
9.	Write a J	ava program to illustrate the abstract class concept	24	CO2
10.	Write a keyword	Java program to Access the instance variables by using this	27	CO2
11.	Write a J	ava class to show the concept of static class	26	CO2
12.	Write a J	ava program to Access the Class members using super Keyword	20	CO2
13.	Write a J	AVA program to implement Single Inheritance.	-	CO2
14.	Write a J	AVA program to implement multi-level inheritance.	19	CO2
15.	Write a J	ava program to implement Interface	22	CO2
16.	Write a overload	JAVA program to implement constructor and constructor ng.	18	CO2
17.	Write a overridin	JAVA program implement method overloading and method g.	-	CO2
18.	Write a I	AVA program to implement a user defined functional interface	-	CO2

	using lambda expressions.		
19.	Write a program prints a multidimensional array of integers.	9	CO2
20.	Write a JAVA program to show the multiplication of two matrices using arrays.	11	CO2
21.	Write a Java program to Search an element using Linear Search	13	CO2
22.	Write a Java program to Search an element using Binary Search	14	CO2
23.	Write a Java Program to Sort elements using Insertion Sort	15	CO2
24.	Write a Java Program to Sort elements using Selection Sort - Largest element method	16	CO2
25.	Write a Java program to Sort elements using Bubble Sort	17	CO2
26.	Write a Java program to handle an Arithmetic Exception - divided by zero	33	CO3
27.	Write a program to implement user defined exception in java.	_	CO3
28.	Write a Java program to illustrate Finally block	34	CO3
29.	Write a Java program to illustrate Multiple catch blocks	35	CO3
30.	Write a Java program for creation of illustrating throw	36	CO3
31.	To implement the concept of assertions in JAVA programming language.	-	CO3
32.	To implement the concept of localization in JAVA programming language.	-	CO3
33.	Write a Java program to print the output by appending all the capital letters in the input in a string.	30	CO3
34.	Write a JAVA program to show the usage of string builder.	31	CO3
35.	Write a JAVA program to show the usage of string buffer.	32	CO3
36.	Write a JAVA program to implement even and odd thread by using Thread class and Runnable interface.	-	CO4
37.	Write a JAVA program to synchronize the threads by using Synchronize statements and Synchronize block	-	CO4
38.	To demonstrate the concept of type annotations in JAVA programming	-	CO4

	language.	
39.	To demonstrate the concept of user defined annotations in JAVA programming language.	CO5
40.	Write a JAVA program to implement the concept of Generic and Collection classes.	CO5
Lab C	ourse Outcome: After completion of this course students will be able to	
CO1	To understand how to design and implement basic data types, command line arguments and control statements	K2
CO2	To demonstrate the Java programs using OOP principles and also implement the concepts of lambda expressions and arrays.	К3
CO3	To demonstrate, understand and use of different exceptional handling mechanisms, assertions, localizations and string handling.	К3
CO4	To solve the real time problems using multithreading and annotations concept.	K3
CO5	To design and develop collections and generic classes in JAVA programming language	K6

CO5	Solve complex problems using non-linear data structures like tree and graph.	K6
	Analyze and Implement sorting and searching algorithms.	K4, K6
CO 3 CO 4	Implement Stack and Queue using array and linked list.	K3
<u> </u>	Circular linked-list.	K0
CO 2	Implement various linear data structures like single Linked-list, doubly Linked-list,	K3, K6
CO 1	Implement operations on single and multi-dimensional array.	K3
Lab Co	urse Outcome: After completion of this course students will be able to	
36	Program to implement the shortest path algorithm	CO5
35	Program to implement the minimum cost spanning tree	CO5
34	Program to implement DFS algorithm	CO5
33	Program to implement BFS algorithm	CO5
32	Program to implement Radix sort.	CO4
31	Program to implement Heap sort in a non-recursive way	CO5
30	Program to implement binary search tree using linked lista. Insertionb. Deletionc. Traversald. Searching	CO5
29	Program to implement binary tree using linked lista. Insertionb. Deletionc. Traversald. Searching	CO5
28	Program implementing Addition of two polynomials via Linked Lists	CO2
27	Program to implement Tower of Hanoi	CO3
26	Program to compute factorial using tail recursion	CO3
25	Program to evaluate postfix expression	CO3
24	Program to convert infix to postfix expression.	CO3
23	Program to implement Stack Operation using Linked list	CO3
22	Program to implement Priority Queue Using linked list	CO3
21	Program to implement Circular Queue Using linked list	CO3

	B. TECH. SECOND YEAR	
Course Code	ACSDS0351 LTP	Credit
Course Title	Data Analysis Lab0 0 2	1
List of Experin	nents:	
Sr. No.	Name of Experiment	CO
1	Write a R program to create a Dataframes which contain details of 5 employees and display the details.	CO1
2	Write a R program to get the first 10 Fibonacci numbers.	CO1
3	Write a R program to get all prime numbers up to a given number.	CO1
4	Write a R program to find the maximum and the minimum value of a given vector.	CO1
5	Create an array, passing in a vector of values and a vector of dimensions, also provide names for each dimension.	CO1
6	Write a R program to create a list containing a vector, a matrix and a list and give names to the elements in the list. Access the first and second element of the list.	CO1
7	Write a R program to create a list containing a vector, a matrix and a list and add element at the end of the list.	CO1
8	Read the following file formats in Python/R: • Comma-separated values • XLSX • ZIP • Plain Text (txt) • JSON • XML • HTML • Images • Hierarchical Data Format • PDF • DOCX • MP3	CO3
9	 Load the Iris dataset as a list of lists Compute and print the mean and the standard deviation for each of the 4 measurement columns (i.e., sepal length and width, petal length and width Compute and print the mean and the standard deviation for each of the 4 measurement columns, separately for each of the three Iris species. 	CO2

10	a. Find the data distributions using box and scatter plot.	CO5
	b. Find the outliers using box plot	
	c. Plot the histogram, bar chart and pie chart on sample data	
	d. Plot Pie Chart, Histogram (3D) [including colourful ones]	
11	Import a sample dataset and perform Regression techniques to find out relation between variables.	CO2
12	 Find the correlation matrix. a. Plot the correlation plot on dataset and visualize giving an overview of relationships among variables on data set. b. Analysis of covariance: variance (ANOVA)if data have categorical variables on data set. 	CO2
13	Write a program to create 3D plot, to add title, change viewing direction, add color and shade to the plot.	CO5
14	a.Create a data frame from the sample data set.b.Create a table with the needed variablesc.Perform the Chi-Square test.	CO2
15	Perform complete steps of exploratory data analysis on standard data sets (iris flowers, Wine Quality Dataset etc.)	CO4
Lab Course (Dutcome: After completion of this course students will be able to	
CO 1	Develop basic R programs.	K3
CO 2	Implement statistical techniques on variety of data.	K3
CO 3	Explore different types of data and file formats.	K2
CO 4	Perform exploratory data analysis on different data types.	К3
CO 5	Apply visualization techniques on various data sets.	K3

B. TECH. SECOND YEAR					
Course Code	AASL0401 L7	P	Credit		
Course Title	Technical Communication 21	0	3		
Course objectiv	ve:				
1	To help the students develop communication and critical thinking skills new securing a job, and succeeding in the diverse and ever-changing workplace first century		-		
2	To enable students to communicate effectively in English at the workplace	•			
grammatica	t must have a good degree of control over simple grammatical forms an al forms of English language. t should be able to speak English intelligibly.	d sor	ne complex		
	Course Content / Syllabus				
UNIT-I	Introduction to Technical Communication and Reading		4 Hours		
• Reading Co	hnical communication omprehension - central idea, tone, and intention ding strategies				
UNIT-II	Technical Writing 1		5 Hours		
Business leNotices, ag	tics of technical writing; technical vocabulary, etymology tters /emails – types, format, style and language enda and minutes tion, CV and resume				
UNIT-III	Technical Writing 2		5 Hour		
Technical rStructure ofTechnical H	eports – types & formats				
UNIT-IV	Public Speaking		5 Hour		
Seminar anConducting	ts of effective speaking (emphasis on voice dynamics) d conference presentation / participating in meetings for a job interview				
UNIT-V	Manuscript Preparation		5 Hours		
	ng and referencing g writing style – Jargons, Abbreviations				

CO 1	Comprehend the fundamental principles of technical communication with special reference to reading.	K2
CO 2	Write various kinds of professional correspondence.	K5
CO 3	Recognise and produce different kinds of technical documents.	K2
CO 4	Apply effective speaking skills to communicate at the workplace.	K3
CO 5	Demonstrate their understanding of various ethical concerns in written communication.	К3

Textbook:

1. Technical Communication – Principles and Practices by Meenakshi Raman & Sangeeta Sharma, Oxford Univ. Press, 2016, New Delhi.

Reference Books:

1. Personality Development and Soft Skills by Barun K Mitra, Oxford Univ. Press, 2012, New Delhi.

2. Spoken English- A Manual of Speech and Phonetics by R K Bansal & J B Harrison, Orient Blackswan, 2013, New Delhi.

3. Business Correspondence and Report Writing by Prof. R C Sharma & Krishna Mohan, Tata McGraw Hill & Co. Ltd., 2001, New Delhi.

4. Practical Communication: Process and Practice by L U B Pandey; A.I.T.B.S. Publications India Ltd.; Krishan Nagar, 2014, Delhi.

5. Modern Technical Writing by Sherman, Theodore A (et.al); Apprentice Hall; New Jersey; USA.

6. A Textbook of Scientific and Technical Writing by S D Sharma; Vikas Publication, Delhi.

7. Skills for Effective Business Communication by Michael Murphy, Harvard University, USA.

8. A Complete Guide to Write Right by Agarwal, Deepa. Scholastic, 1st edition.

9. Technical writing and communication, R S Sharma, V.P. Publication, 1st edition.

10. Business Communication for Managers by Payal Mehra, Pearson Publication, Delhi.

B. TECH. SECOND YEAR						
Course Code	ACSE0403A	L T P	Credits			
Course Title	Operating Systems	300	3			

Course objective:

The objective of the course is to provide an understanding of the basic modules and architecture of an operating system and the functions of the modules to manage, coordinate and control all the parts of the computer system. This course cover processor scheduling, deadlocks, memory management, process synchronization, system call and file system management.

Pre-requisites: Basic knowledge of computer fundamentals, Data structure and Computer organization.

Course Contents / Syllabus

UNIT-I Fundamental Concepts of Operating System

8 Hours

Introduction, Functions of Operating System, Characteristics of Operating System, Computer System Structure, Evolution of Operating Systems-Bare Machine, Single Processing, Batch Processing,Multiprogramming,Multitasking,Multithreaded,Interactive, Time sharing, Real Time System, Distributed System, Multiprocessor Systems, Multithreaded Systems, System Calls, System Programs and System Boot, Interrupt Handling, Operating System Structure- Simple structure, Layered Structure, Monolithic, Microkernel and Hybrid, System Components, Operating System Services, Case Studies: Windows, Unix and Linux.

UNIT-II Process Management

8 Hours

Scheduling Concepts, Performance Criteria, Process States, Process Transition Diagram, Schedulers, Process Control Block (PCB), Process Address Space, Process Identification Information, Threads and their management, Types of Scheduling: Long Term Scheduling, Mid Term Scheduling, Short Term Scheduling, Preemptive and Non Pre-emptive Scheduling, Dispatcher, Scheduling Algorithm: FCFS, Non Pre-emptive SJF, Preemptive SJF, Non Pre-emptive Priority, Pre-emptive Priority, Round Robin, Multilevel Queue Scheduling and Multilevel Feedback Queue Scheduling.

UNIT-IIIDeadlock and Concurrent Processing8 HoursDeadlock: System model, Deadlock characterization, Prevention, Avoidance and detection, Recovery from
Deadlock,Principle of Concurrency, Process Synchronization, Producer / Consumer Problem, Mutual Exclusion,
Critical Section Problem, Peterson's Solution, Lamport Bakery Solution, Semaphores, Test and Set Operation;
Critical Section Problems and their solutions. Proved Puffer Problem. Peeder Writer Problem.

Critical Section Problems and their solutions - Bound Buffer Problem, Reader-Writer Problem, Dining Philosopher Problem, Sleeping Barber Problem; Inter Process Communication Models and Schemes, Process Generation.

UNIT-IV	Memory Management	8 Hours
---------	-------------------	---------

Memory Management function, Address Binding Loading : Compile Time, Load Time and Execution Time, MMU, Types of Linking, Types of Loading, Swapping, Multiprogramming with Fixed Partitions, Multiprogramming with variable partitions, Memory Allocation: Allocation Strategies First Fit, Best Fit, and Worst Fit, Paging, Segmentation, Paged Segmentation, Virtual Memory Concepts, Demand Paging, Performance of Demand Paging, Page Replacement Algorithms: FIFO, LRU, Optimal and LFU, Belady's Anomaly, Thrashing, Cache Memory Organization, Locality of Reference.

UNIT-V I/O Management and Disk Scheduling

8 Hours

I/O Devices, and I/O Subsystems, I/O Buffering, I/O Ports, Disk Storage: Seek Time, Rotational Latency, Data Transfer Time, Average Access Time and Controller Time, Disk Storage Strategies, Disk Scheduling: FCFS, SSTF, SCAN, C-SCAN, LOOK and C-LOOK. Directory and Directory Structure, File System: File concept, File Access Mechanism: - Sequential Access, Direct Access and Index Access methods, File Allocation Method: Contiguous, Linked and Indexed, Free Space Management: -Bit Vector, Linked List, Grouping and Counting File System Implementation Issues, File System Protection and Security, RAID.

Course outcome: After completion of this course students will be able to:

CO 1	Understand the fundamentals of an operating systems, functions and their structure and functions.	K1, K2
CO 2	Implement concept of process management policies, CPU Scheduling and thread management.	K5
CO 3	Understand and implement the requirement of process synchronization and apply deadlock handling algorithms.	K2, K5
CO 4	Evaluate the memory management and its allocation policies.	K5
CO 5	Understand and analyze the I/O management and File systems	K2, K4

Text books:

1) Operating System Concepts Essentials. Abraham Silberschatz, Peter Baer Galvin and Greg Gagne.

Reference Books:

- 1) Operating Systems: Internals and Design Principles. William Stallings.
- 2) Operating System: A Design-oriented Approach. Charles Patrick Crowley.
- 3) Operating Systems: A Modern Perspective. Gary J. Nutt.
- 4) Design of the Unix Operating Systems. Maurice J. Bach.
- 5) Understanding the Linux Kernel, Daniel Pierre Bovet, Marco Cesati.

B. TECH.SECONDYEAR LTP **Course Code ACSAI0401** Credits **Introduction to Artificial Intelligence** 300 **Course Title** 3 **Course objective:** Introductory knowledge of historical perspective of AI and its foundations and familiarity with principles of AI toward problem solving, inference, perception, knowledge representation, and learning. Acquiring the knowledge various forms of learning and computation statistics. **Pre-requisites:**Basic knowledge of AI and Machine Learning Concepts. **Course Contents / Syllabus**

UNIT-I Introduction **8** Hours Introduction to Artificial Intelligence, Historical developments of Artificial Intelligence, well defined learning problems, Designing a Learning System, Basics of problem-solving: problem representation paradigms, state space, satisfiability vs optimality, pattern classification problems, example domains.

UNIT-II Search Techniques

Searching for solutions, Uninformed Search Strategies: DFS, BFS, Informed Search Strategies: Local search algorithms and optimistic problems, adversarial Search, Search for games, minimax, Alpha - Beta pruning, Heuristic Search techniques, Hill Climbing, Best-first search, Problem reduction, Constraint satisfaction, Means Ends Analysis, Iterative deepening Heuristic Search and A*.

Logic and Knowledge Representation **UNIT-III**

Introduction of Logic, Propositional Logic Concepts, Semantic Tableaux and Resolution in Propositional logic, FOPL, Semantic Tableaux and Resolution in FOPL, Logic Programming in Prolog. Production systems and rules for some AI problems: Water Jug Problem, Missionaries-Cannibals Problem, n-Queen problem, monkey banana problem, Travelling Salesman Problem. Knowledge representation, semantic nets, partitioned nets, parallel implementation of semantic nets. Frames, Common Sense reasoning and thematic role frames.

Expert System UNIT-IV

Architecture of knowledge-Based System, Rule-based systems, Forward and Backward Chaining, Frame Based systems. Architecture of Expert System, Forward & Backward chaining, Resolution, Probabilistic reasoning, Utility theory, Hidden Markov Models (HMM), Bayesian Networks.

Planning and Uncertainty UNIT-V

Planning with state Space Search, Conditional Planning, Continuous planning, Multi-Agent Planning, Forms of learning, inductive learning, Reinforcement Learning, learning decision trees, Neural Net learning and Genetic learning. Probabilistic Methods, Bayesian Theory, Dempster Shafer Theory, Bayes Network. Evolutionary computation: Swarm Intelligence, ant colony optimization Agents, Intelligent Agents, Structure of Intelligent Agents, Virtual Agents, Multi-agent systems.

Case Study: Health Care, E Commerce, Smart Cities.

UNIT-IV	Push Down Automata	8 Hours
Pushdown Automata	a- Definition, Representation, Instantaneous Description (ID), Acceptance	e by PDA,
Nondeterministic Pu	shdown Automata (NPDA)- Definition, Moves, Pushdown Automata and C	Context Free

UNIT-V Turing Machine and Undecidability 8 Hours

Language, Pushdown Automata and Context Free Grammar, Two stack Pushdown Automata.

Turing Machine Model, Representation of Turing Machines, Language Acceptability of Turing Machines, Techniques for Turing Machine Construction, Variations of Turing Machine, Turing Machine as Computer of Integer Functions, Universal Turing machine, Linear Bounded Automata, Church's Thesis, Recursive and Recursively Enumerable language, Closure Properties of Recursive and Recursively Enumerable Languages, Non-Recursively Enumerable and Non-Recursive Languages, Undecidability, Halting Problem, Undecidability of Halting Problem, Post's Correspondence Problem.

Course outcome: After completion of this course students will be able to:

CO 1	Design and Simplify automata for formal languages and transform non-deterministic	K6
	finite automata to deterministic finite automata.	
CO 2	Identify the equivalence between the regular expression and finite automata and apply	K3
	closure properties of formal languages to construct finite automata for complex problems.	
CO 3	Define grammar for context free languages and use pumping lemma to disprove a formal	K3
	language being context- free.	
CO 4	Design pushdown automata (PDA) for context free languages and Transform the PDA to	K6
	context free grammar and vice-versa.	
CO 5	Construct Turing Machine for recursive and recursive enumerable languages. Identify the	K6
	decidable and undecidable problems.	
Tarthas	1

	B. TECH.SECONDYEAR						
Course Code	ACSE0453A	LT P	Credits				
Course Title	Operating Systems Lab	0 0 2	1				
List of Experiments:							
Sr. No.	Name of Experiment	C	0				
1. Linux based Commands	Lab1: Execute Various types of Linux Commands (Miscellaneous, File oriented, Directory oriented) Lab2: Shell Programming Write a shell program, which accepts the name of a file from standard input and perform the following test on it: i. File readable iii. File writable iii. Both readable and writable	C	D1				
2. CPU Scheduling Algorithms	Lab3: Implement CPU Scheduling Algorithms: 1. FCFS 2. SJF 3. PRIORITY Lab4: 4. Round Robin 5. Multi-level Queue Scheduling	CC	03				
3. Deadlock	Lab5: Implementation of Banker's algorithm for the purpose	CO	03				
Management	of Deadlock Avoidance.	<u> </u>	24				
4. Memory Management Techniques	 Lab6: Write a program to simulate the following contiguous memory allocation techniques: a) First fit b) Best fit c) Worst Fit Lab7: a) Write a Program for implementation of Contiguous memory fixed partition technique. b) Write a program for implementation of Contiguous memory variable partition technique. Lab8: Write a program to simulate page replacement algorithms: a) FIFO b) LRU c) Optimal 	C					
5. Disk Scheduling Techniques	Lab9: Write a program to simulate Disk Scheduling Algorithms: a) FCFS b) SSTF Lab 10: c) SCAN & C-SCAN d) Look & C-LOOK	C	D5				
6. Process Synchronization	Lab11: Write a program to simulate Producer Consumer problem	C	02				
Lab Course Ou	Lab Course Outcome: After completion of this course students will be able to						
CO1	Gain all round knowledge of various Linux Commands.	K	2				

CO2	Analyze and implement Process Synchronization technique.	K4,K5
CO3	Analyze and implement CPU scheduling algorithms.	K4, K5
CO4	Analyze and implement Memory allocation and Memory management techniques.	K4, K5
CO5	Analyze and implement Disk Scheduling Policies.	K4, K5

Course Code	ACSAI0452 L T P	Credit
Course Title	Database Management Systems Lab0 0 2	1
List of Experin	nents:	
Sr. No.	Name of Experiment	СО
1.	Installing ORACLE/ MYSQL/NOSQL.	CO1
2.	Creating Entity-Relationship Diagram using case tools with Identifying (entities, attributes, keys and relationships between entities, cardinalities, generalization, specialization etc.)	CO1
3.	I.Implement DDL commands –Create, Alter, Drop etc.II.Implement DML commands- Insert, Select, Update, Delete	CO2
4.	 I. Implement DCL commands-Grant and Revoke II. Implement TCL commands- Rollback, Commit, Save point III. Implement different type key: -Primary Key, Foreign Key and Unique etc. 	CO2
5.	Converting ER Model to Relational Model (Represent entities and relationships in Tabular form, Represent attributes as columns, identifying keys).	CO1, CO2
6.	Practice Queries using COUNT, SUM, AVG, MAX, MIN, GROUP BY, HAVING, VIEWS Creation and Dropping.	CO2
7.	Practicing Queries using ANY, ALL, IN, EXISTS, NOT EXISTS, UNION, INTERSECT, CONSTRAINTS etc.	CO2
8.	Practicing Sub queries (Nested, Correlated) and Joins (Inner, Outer and Equi).	CO2
9.	Practicing on Triggers - creation of trigger, Insertion using trigger, Deletion using trigger, Updating using trigger	CO4
10.	Procedures- Creation of Stored Procedures, Execution of Procedure, and Modification of Procedure	CO4
11.	Cursors - Declaring Cursor, Opening Cursor, Fetching the data, closing the cursor.	CO4
12.	Study of Open Source NOSQL Database: MongoDB (Installation, Basic CRUD operations, Execution)	CO5
13.	Design and Develop MongoDB Queries using CRUD operations. (Use CRUD operations, SAVE method, logical operators)	CO5
14.	Implement aggregation and indexing with suitable example using MongoDB.	CO5
15.	Mini project (Design & Development of Data and Application) for following: - a) Inventory Control System.	CO1

	 b) Material Requirement Processing. c) Hospital Management System. d) Railway Reservation System. e) Personal Information System. f) Web Based User Identification System. 	
	g) Timetable Management System.h) Hotel Management System	
Lab Course Ou	tcome: After completion of this course students will be able to	
CO 1	Design and implement the ER, EER model to solve the real-world problem and transform an information model into a relational database schema and to use a data.	K6
CO 2	Formulate and evaluate query using SQL solutions to a broad range of query and data update problems.	K6
CO 3	Apply and create PL/SQL blocks, procedure functions, packages and triggers, cursors.	K3, K6
CO 4	Analyze entity integrity, referential integrity, key constraints, and domain constraints on database.	K4
CO5	Demonstrate understanding of MongoDB and its query operations.	K3

CO 3	Comprehend IT Assets security (hardware and K2 Software) and performance indicators	
CO 4	Measure the performance and encoding strategies of K3, K5 security systems.	
CO 5	Understand and apply cyber security methods and K2, K3 policies to enhance current scenario security.	
Text books:	ponotes to enhance euront seenanto seedrity.
