NOIDA INSTITUTE OF ENGINEERING & TECHNOLOGY, GREATER NOIDA (An Autonomous Institute)

B. TECH (IoT)

* AICTE Guidelines in Model Curriculum:

A student will be eligible to get Under Graduate degree with Honours only, if he/she completes the additional MOOCs courses such as Coursera certifications, or any other online courses recommended by the Institute (Equivalent to 20 credits). During Complete B.Tech. Program Guidelines for credit calculations are as follows.

- 1. For 6 to 12 Hours =0.5 Credit
- 2. For 13 to18 =1 Credit
- 3. For 19 to 24 =1.5 Credit
- 4. For 25 to 30 =2 Credit
- 5. For 31 to 35 =2.5 Credit
- 6. For 36 to 41 =3 Credit
- 7. For 42 to 47 =3.5 Credit
- 8. For 48 and above =4 Credit

For registration to MOOCs Courses, the students shall follow Coursera registration details as per the assigned login and password by the Institute these courses may be cleared during the B. Tech degree program (as per the list provided). After successful completion of these MOOCs courses, the students shall provide their successful completion status/certificates to the Controller of Examination (COE) of the Institute through their coordinators/Mentors only.

The students shall be awarded Honours Degree as per following criterion.

- i. If he / she secures 7.50 as above CGPA.
- ii. Passed each subject of that degree program in the single attempt without any grace.
- iii. Successful completion of MOOCs based 20 credits.

	B.TECH FIRST YEAR										
Course Code	AAS0101A	L	Т	Р	Credit						
Course Title	Engineering Physics	3 1 0 4									
Course objec	tive:										
1	1 To provide the knowledge of Relativistic Mechanics and their uses to engineering applications.										
2	2 To provide the knowledge of Quantum Mechanics and to explore possible engineering utilization.										
3	To provide the knowledge of interference and diffraction.										
4 To provide the knowledge of the phenomenon of semiconductors and its uses to engineering applications.											
5	To provide the basic knowledge of Optical Fiber and Laser which is necessary to understand the working of modern engineering tools and techniques.										
Pre-requisite	s: Newton's laws of motions, scalar and vectors, elec	trici	ty a	nd 1	nagnetism,						
basic laws of	optics.										
	Course Contents / Syllabus										
UNIT-I	Relativistic Mechanics			8 ho	ours						
Frame of reference, Inertial & non-inertial frames, Galilean transformations, Michelson Morley experiment, Postulates of special theory of relativity, Lorentz transformations, Length contraction, Time dilation, Velocity addition theorem, Variation of mass with velocity, Einstein's mass energy relation, Relativistic relation between energy and momentum, Massless particle. Some engineering applications(qualitative): Global positioning system (GPS), Application to Satellites.											
UNIT-II	Quantum Mechanics				8 hours						
Introduction to uncertainty prin dependent and t Theory of Quan	wave-particle duality, de Broglie matter waves, Phase and group ciple and its applications, Wave function characteristics and sig ime- independent Schrödinger's wave equations, Particle in one tum excitation of the Higgs field (Higgs Boson or GOD particle	p vel nific e-dim e)(qu	ociti ance nens alita	es, H e, Tir ional tive)	leisenberg's ne- rigid box,						

UNIT-III	Wave Optics	10 hours						
Coherent sourc	es, Interference in uniform and wedge shaped thin films, Nece	ssity of extended sources,						
Newton's Ring	s and its applications, Fraunhofer diffraction at single slit and at	double slit, absent spectra,						
Diffraction gra	ting, grating spectra, Rayleigh's criterion of resolution, Res	solving power of grating,						
Optical filters.								
UNIT-IV	Semiconductor Physics and Information Storage	6 hours						
(a) Introduction	to the concept of electrical conductivity, conductivity of condu	ictors and semiconductors,						
Fermi-Dirac pr	obability distribution function, Position of Fermi level in intr	rinsic semiconductors and						
extrinsic semic	onductors, variation of Fermi level with temperature (qualita	tive), Photovoltaic effect,						
working of a so	lar cell on the basis of band diagrams and Applications.							
(b) Basics of m	agnetic, and semiconductor memories							
UNIT-V	Fiber Optics & Laser	8 hours						
Fiber Optics: Introduction to fiber optics, Acceptance angle, Numerical aperture, Normalized frequency,								
Classification o	f fiber, Attenuation and Dispersion in optical fibers.							
Laser: Absorpti	on of radiation. Spontaneous and stimulated emission of radiation	on. Einstein's coefficients.						
Population inve	ersion, Ruby Laser, He-Ne Laser.	,,						
Decent constructions								
Recent applicat	ionsol optical libersandLaser(Quantative):Laser-guided UAV (Drone).						
Course outco	ome: After completion of this course students will be a	able to:						
CO 1	Solve the relativistic mechanics problems	K1,K2,K3						
CO 2	Apply the concept of quantum mechanics	K1,K2,K3						
CO 3	Apply the laws of optics and their application in various	K1,K2,K3						
	processes							
CO 4	Define the laws of semiconductors.	K1,K2						
CO 5	Explain the working of modern engineering tools and	K1,K2						
	techniques of optical fiber and laser.

	B. TECH FIRST YEAR									
Course	Code	ACSE0101	LTF	Y Credit						
Course	Title	Problem solving using Python	3 0 0	3						
Course	object	ive:								
1	To imp	part knowledge of basic building blocks of Python p	orogramm	ing						
2	To pro	vide skills to design algorithms for problem solving	5							
3	To imp	part the knowledge of implementation and debuggin	ng of basi	c programs in						
	Python									
4	To dise	seminate the knowledge of basic data structures								
5	To provide the knowledge of file system concepts and its application in data handling									
Pre-requisites: Students are expected to be able to open command prompt window or										
terminal window, edit a text file, download and install software, and understand basic										
programn	programming concepts.									
Course Contents / Syllabus										
UNIT-I		Basics of python programming		8 hours						
Introducti	Introduction: Introduction to computer system, algorithms. Ethics and IT policy in company.									
Feature o	f objec	-oriented programming, A Brief History of Pythe	on,Applic	ations areas of						
python, T	he Prog	ramming Cycle for Python, Python IDE, Interacting	g with Py	thon Programs.						
Elements	of Pyt	non:keywords and identifiers, variables, data typ	es and ty	pe conversion,						
operators	in pyth	on, expressions in python, strings.								
UNIT-I	I	Decision Control Statements		8 hours						
Condition	als: Co	nditional statement in Python (if-else statement, its	working	and execution),						
Nested-if	statem	ent and elif statement in Python, Expressio	n Evalua	ation & Float						
Represent	tation.									
Loops: P	urpose	and working of loops, while loop, For Loop, N	Nested La	oops,Break and						
Continue,	pass st	atement.								
UNIT-I	II	Function and Modules		8 hours						
Introducti	on of I	Function, calling a function, Function arguments,	built in	function, scope						
rules, Pas	sing fur	ction to a function, recursion, Lambda functions								
Modules	Modules and Packages: Importing Modules, writing own modules, Standard library modules,									
dir() Function, Packages in Python										
UNIT-I	V	BasicData structures in Python		8 hours						
Strings:	Basic o	operations, IndexingandSlicing of Strings, Com	paring st	trings, Regular						
expressions.										
Python BasicData Structure: Sequence, Unpacking Sequences, Mutable Sequences,										
Lists,List	Compre	hension, Looping in lists, Tuples, Sets, Dictionaries	S							

UNI-V File and Exception handling 8 hours Files and Directories: Introduction to File Handling in Python, Reading and Writing files, Additional file methods, Working with Directories. Exception Try-except Statement, Raise, Assert Searching & Sorting:Simple search & Binary search, Selection Sort, Merge Sort Vorexcept Course outcome: At the end of course, the student will be able to CO 1 Write simple python programs. K2, K3 CO 2 Develop python programs usingdecision control statements K3, K6 K4, K6 CO 3 Implement user defined functions and modules in python K2 CO 4 Implement user defined functions with files in python and implement searching, sorting and merging algorithms K3, K4 Text books (1) Magnus Lie Hetland, "Beginning Python-From Novice to Professional"—Third Edition, Apress COP (2) Python Programming using Problem solving approach by ReemaThareja OXFORD Higher education (3) Kenneth A. 	Defense en alle et de serve et de terte	••	U			11		
	Before opening the park, club auth	iority		ides			ate Sa	arety index of the park. The
	Sofety Index coloulation	ibea	belo	w. P	lease	neip	them	to calculate.
	Assume a person stands on grassla	nd(v)) on d		mila	dan	00000	as from the ages situated on
	Assume a person stands on grassland (x) If the person can asso	Hu(X)	anc	i a S ny ci	iiiii0 F thai	uull	escape	tes hefore the Smiledon able
	f grassianu(y). If the person call escap		лп а 1164	ny Ul safa		it ic	unsof	The A person and a Smilldon
	both take 1 second to move from α	is Ca	ancu ag to	sale	ther i	n 18 adiae	unsal	realton bottom left or right)
	but a person can move only over a	ut ar	ea 10 nde	thous	nter a ah Si	auja(mila	don a	an move over grasslands and
	but a person can move only over gr	assia	nas	unou	gn Si	111100	Jon ca	an move over grasslands and

mountains.

If any grassland is unreachable for Smilodon(maybe it is unreachable for any person also), to increase safe index value Club Authority use to mark those grasslands as safe land. Explained below

w	м	G	G	G	G	
М	G	w	G(x)	м	M	
G	w	G	G(y)	G	G	
w	G(z)	w	М	w	G	

For the above layout, there is only one gate at (4,6)

Y is the position of Smilodon's cage

X is not safe area

Z is a safe area as is it not possible for smilodon to reach z

Safety index=(total grassland areas which are safe*100)/total grassland area

Constraints

i. 3<= R,C<= 10^3

- ii. Gates are situated on grasslands only and at the edge of the park
- iii. The cage is also situated in grassland only
- iv. The position of the cage and the position of three gates are different

Input Format

The first line of the input contains two space-separated integers R and C, denoting the size of the park (R*C)

The second line contains eight space-separated integers where

First two integers represent the position of the first gate

3rd and 4th integers represent the position of second gate

5th and 6th integers represent the position of third gate respectively

The last two integers represent the position of the cage

Next R lines, each contains space separated C number of characters. These R lines represent the park layout.

Output

Safety Index accurate up to two decimal places using Half-up Rounding method

G GGG
G W W M
GGWW
MGMM
Output

	75.00	l
3.	Bank Compare	
	Problem Description	
	There are two banks; Bank A and Bank B. Their interest rates vary. You have received offers	
	from both bank in terms of annual rate of interest, tenure and variations of rate of interest	
	over the entire tenure.	
	You have to choose the offer which costs you least interest and reject the other.	
	Do the computation and make a wise choice.	
	The loan repayment happens at a monthly frequency and Equated Monthly Installment (EMI)	
	is calculated using the formula given below :	
	EMI = loanAmount * monthlyInterestRate/(1 - 1 / (1	
	+monthlyInterestRate)^(numberOfYears * 12))	
	Constraints	
	i. $1 \le P \le 1000000$	
	ii. $1 \le T \le 50$	
	111. $1 \le N1 \le 30$ iv $1 \le N2 \le 30$	
	Input Format	
	First line : P – principal (Loan Amount)	
	Second line : T – Total Tenure (in years).	
	Third Line : N1 is number of slabs of interest rates for a given period by Bank A. First slab	
	starts from first year and second slab starts from end of first slab and so on.	
	Next N1 line will contain the interest rate and their period.	
	After N1 lines we will receive N2 viz. the number of slabs offered by second bank.	
	Next N2 lines are number of slabs of interest rates for a given period by Bank B. First slab	
	starts from first year and second slab starts from end of first slab and so on.	
	The period and rate will be delimited by single white space.	
	Output	
	Your decision – either Bank A or Bank B.	
	Explanation

	Output
	Bank B
4	Cross Words
	Problem Description
	A crossword puzzle is a square grid with black and blank squares, containing clue numbers
	(according to a set of rules) on some of the squares. The puzzle is solved by obtaining the
	solutions to a set of clues corresponding to the clue numbers.
	The solved puzzle has one letter in each of the blank square, which represent a sequence of
	letters (consisting of one or more words in English or occasionally other languages) running
	along the rows (called "Across", or "A") or along the columns (called "Down" or "D"). Each
	numbered square is the beginning of an Across solution or a Down solution. Some of the
	across and down solutions will intersect at a blank square, and if the solutions are consistent.
	both of them will have the same letter at the intersecting square.
	In this problem, you will be given the specifications of the grid, and the solutions in some
	random order. The problem is to number the grid appropriately, and associate the answers
	consistently with the clue numbers on the grid, both as Across solutions and as Down
	solutions, so that the intersecting blank squares have the same letter in both solutions.
	Rules for Clue Numbering
	The clue numbers are given sequentially going row wise (Row 1 first, and then row2 and so
	on)
	Only blank squares are given a clue number
	A blank square is given a clue number if either of the following conditions exist (only one
	number is given even if both the conditions are satisfied)
	It has a blank square to its right, and it has no blank square to its left (it has a black square to
	its left, or it is in the first column). This is the beginning of an Across solution with that
	number
	It has a blank square below it, and no blank square above it (it has a black square above it or
	it is in the first row). This is the beginning of a Down solution with that number
	Constraints
	i. 5<=N<=15
	$11. 5 \le M \le 50$
	The input consists of two parts, the grid part and the solution part
	The first line of the grid part consists of a number N the size of the grid (the overall grid is N
	x N) squares. The next N lines correspond to the N rows of the grid. Each line is comma
	separated and has number of pairs of numbers the first giving the position (column) of the
	beginning of a black square block and the next giving the length of the block. If there are no
	black squares in a row the pair "0.0" will be specified. For example, if a line contains
	"2.3.7.1.14.2", columns 2.3.4 (a block of 3 starting with 2). 7 (a block of 1 starting with 7)
	and 14 15 (a block of 2 starting with 14) are black in the corresponding row

The solution part of the input appears after the grid part. The first line of the solution part contains M, the number of solutions. The M subsequent lines consist of a sequence of letters

corresponding to a solution for one of the Across and Down clues. All solutions will be in upper case (Capital letters)

Output

The output is a set of M comma separated lines. Each line corresponds to a solution, and consists of three parts, the clue number, the letter A or D (corresponding to Across or Down) and the solution in to that clue (in upper case)

The output must be in increasing clue number order. If a clue number has both an Across and a Down solution, they must come in separate lines, with the Across solution coming before the Down solution.

Skateboard
Problem Description
The amusement park a

5.

The amusement park at Patagonia has introduced a new skateboard competition. The skating surface is a grid of N x N squares. Most squares are so constructed with slopes that it is possible to direct the skateboard in any of up to three directions of the possible four (North ,East, South or West, represented by the letters N, E, S and W respectively). Some squares however have a deep drop from the adjacent square from which it is impossible to go to any adjacent square. These are represented by D (for Drop) in that square. The objective is to maneuver the skateboard to reach the South East corner of the grid, marked F. Each contestant is given a map of the grid, which shows where the Drop squares are (marked

D), where the Final destination is (marked F), and, for each other square, the directions it is possible to maneuver the skateboard in that square.

The contestant draws lots to determine which of the squares on the boundaries of the grid on the North or the West of the grid (the top or the left in the diagram) he or she should start in. Then, using a map of the grid, he or she needs to try to reach the South East corner destination by maneuvering the skateboard.

In some cases, it is impossible to reach the destination. For example, in the diagram above, if one starts at the North East corner (top right in the diagram), the only way is to go is South, until the Drop square is reached (three squares South), and the contestant is stuck there.

A contestant asks you to figure out the number of squares at the North or West boundary (top or left boundary in the map) from which it is feasible to reach the destination.

Constraints

i. 5<=N<=50

Input Format

The first line of the input is a positive integer N, which is the number of squares in each side of the grid.

The next N lines have a N strings of characters representing the contents of the map for that corresponding row. Each string may be F, representing the Final destination, D, representing a drop square, or a set of up to three of the possible four directions (N,E,S,W) in some random order. These represent the directions in which the contestant can maneuver the skateboard when in that square.

Output

The output is one line with the number of North or West border squares from which there is a safe way to maneuver the skateboard to the final destination.

Explanation Example 1 Input 6 ES,ES,SE,ES,ES,S

	SE,ES,SE,ES,ES,S
	ES,ES,SE,ES,SE,S
	ES,SE,ES,SE,E,D
	SE,ES,D,WSE,NES,NS
	E,E,NE,E,E,F
	Output
	9
6.	Chakravyuha
	Problem Description
	During the battle of Mahabharat, when Arjuna was far away in the battlefield, Guru Drona
	made a Chakravyuha formation of the Kaurava army to capture YudhisthirMaharaj.
	Abhimanyu, young son of Arjuna was the only one amongst the remaining Pandava army
	who knew how to crack the Chakravyuha. He took it upon himself to take the battle to the
	enemies.
	Abhimanyu knew how to get power points when cracking the Chakravyuha. So great was his
	provess that rest of the Pandava army could not keep pace with his advances. Worried at the
	rest of the army falling benind, YudhistnirManaraj needs your help to track of Abhimanyu's
	advances. Write a program that tracks now many power points Abhimanyu has collected and
	A Chalmany where a where like formation. Distarially, it is deniated as helow.
	A Chakravyuna is a wheel-like formation. Pictoriany it is depicted as below
	Fig 1. Chakravyuha
	A Chakravyuha has a very well-defined co-ordinate system. Each point on the co-ordinate
	system is manned by a certain unit of the army. The Commander-In-Chief is always located
	at the centre of the army to better co-ordinate his forces. The only way to crack the
	Chakravyuha is to defeat the units in sequential order.
	A Sequential order of units differs structurally based on the radius of the Chakra. The radius
	can be thought of as length or breadth of the matrix depicted above. The structure
	i.e.placement of units in sequential order is as shown below

1	2	3	4	5
16	17	18	19	6
15	24	25	20	1
14	23	22	21	8
13	12	11	10	9

Fig 2. Army unit placements in Chakravyuha of size 5

The entry point of the Chakravyuha is always at the (0,0) co-ordinate of the matrix above. This is where the 1st army unit guards. From (0,0) i.e. 1st unit Abhimanyu has to march towards the center at (2,2) where the 25th i.e. the last of the enemy army unit guards. Remember that he has to proceed by destroying the units in sequential fashion. After destroying the first unit, Abhimanyu gets a power point. Thereafter, he gets one after destroying army units which are multiples of 11. You should also be a in a position to tell YudhisthirMaharaj the location at which Abhimanyu collected his power points.

Input Format:

First line of input will be length as well as breadth of the army units, say N

Output Format:

- Print NxN matrix depicting the placement of army units, with unit numbers delimited by (\t) Tab character
- Print Total power points collected
- Print coordinates of power points collected in sequential fashion (one per line)
- Constraints: 0 < N <=100

		0 0					
11.	Min Pro	duct ari	ay				
	Problem) Descrip	otion				
	The task	is to find	the minin	num sum of Products of two arrays of the same size, given that k			
	modifications are allowed on the first array. In each modification, one array element of the						
	first array can either be increased or decreased by 2.						
	Note- the product sum is Summation (A[i]*B[i]) for all i from 1 to n where n is the size of						
	both arrays						
	Input Fo	ormat:					
		i. Fi	rst line of	the input contains n and k delimited by whitespace			
		ii. Se	cond line	contains the Array A (modifiable array) with its values delimited			
		by	spaces				
		iii. Tł	nird line co	ontains the Array B (non-modifiable array) with its values			

delimited by spaces

Output Format:

Output the minimum sum of products of the two arrays

Constraints:

- i. $1 \le N \le 10^{5}$
- ii. $0 \le |A[i]|, |B[i]| \le 10^{5}$
- iii. $0 \le K \le 10^9$

Sample Input and Output

S.No.	Input	Output
1	3 5	-31
	12-3	
	-2 3 -5	
2	53	25
	23454	
	3 4 2 3 2	

Explanation for sample 1:

Here total numbers are 3 and total modifications allowed are 5. So we modified A[2], which is -3 and increased it by 10 (as 5 modifications are allowed). Now final sum will be (1 * -2) + (2 * 3) + (7 * -5)-2 + 6 - 35-31 -31 is final answer. **Explanation for sample 2:** Here total numbers are 5 and total modifications allowed are 3. So we modified A[1], which is 3 and decreased it by 6 (as 3 modifications are allowed). Now final sum will be (2 * 3) + (-3 * 4) + (4 * 2) + (5 * 3) + (4 * 2)6 - 12 + 8 + 15 + 825 25 is final answer. **Consecutive Prime Sum Problem Description** Some prime numbers can be expressed as a sum of other consecutive prime numbers. For example, 5 = 2 + 3, 17 = 2 + 3 + 5 + 7, 41 = 2 + 3 + 5 + 7 + 11 + 13. Your task is to find out how many prime numbers which satisfy this property are present in the range 3 to N subject to a constraint that summation should always start with number 2.

Write code to find out the number of prime numbers that satisfy the above-mentioned property in a given range.

S.

12.

Input Output Comment

	No.			
	1	20	2	(Below 20, there are 2 such members: 5 and 17)
				5 = 2+3
				17 = 2 + 3 + 5 + 7
	2	15	1	
	Input Forma	t:

	Example 1			
	Input:			
	12,3			
	Output:			
	4			
	Explanation:			
	N is 12, k is 3	3. The fac	tors of 12	2 are (1,2,3,4,6,12). The highest factor is 12 and the third
	largest factor	is 4. The	output m	ust be 4
14.	Coins Distrib	oution Qu	estion (o	or Coins Required Question)
	Problem Des	cription		
	Find the min	imum nu	mber of	coins required to form any value between 1 to N, both
	inclusive. Cur	nulative	value of o	coins should not exceed N. Coin denominations are 1 Rupee,
	2 Rupee and 5	5 Rupee.		
	Let's understo	ind the n	rohlem u	sing the following example. Consider the value of N is 12
	then the minin	mum nun	ber of co	bins required to formulate any value between 1 and 13 is 6

	One 5 Rupee, three 2 Rupee and two 1 Rupee coins are required to realize any value between
	1 and 13. Hence this is the answer.
	However, if one takes two 5 Rupee coins, one 2 rupee coins and two 1 rupee coins, then to all
	values between 1 and 13 are achieved. But since the cumulative value of all coins equals 14,
	i.e., exceeds 13, this is not the answer.
	Input Format
	A single integer value
	Output Format
	Four Space separated Integer Values
	1st – Total Number of coins
	2nd – number of 5 Rupee coins.
	3rd – number of 2 Rupee coins.
	4th – number of 1 Rupee coins.
	Constraints
	0 <n<1000< th=""></n<1000<>
	Sample Input:
	13
	Sample Output:
	6132
S. NO.	Debugging Experiments

Course '	Title	Engineering Graphics & Solid Modelling 0	0 0 3 1.5		
Course	objective:				
1	To familia	rize the students with the concepts of Engineering Graphics and pro	vide		
	understand	ing of the drafting, principles, instruments, standards, conventions	of		
	drawings, s	scales, curves etc.			
2	To impart	knowledge about projections of point, lines and planes.			
3	To make t	he students able tounderstandorthographic projections of simple s	olids	and	
	their section	ns and development of curves for lateral surfaces			
4	To make the	nem capable to prepare engineering drawing using CAD software.			
5	To make the	nem capable to prepare engineering drawing using CREO software.			
Pre-req	uisites: Kn	owledge of basic geometry.			
		Course Contents / Syllabus			
UNIT-I		Introduction	6	hours	
Introducti	on to engir	neering graphics, Convention for Lines and their uses, Symbol	s for	different	
materials	and surface	e finish, Methods of dimensioning, Scales, Cycloidal curves and	d invo	olutes. (1	
Sheet)					
UNIT-I	[Projection of points, lines and planes	6	hours	
Projection	of points, l	ines and planes. (1 Sheet)	•		
UNIT-I	Ι	Projection of solids and Sections of solids and		6 hours	
		Development of surfaces			
Orthograp	hic projecti	ons of regular solids. Projection of section of regular solids. D	evelo	pment of	
lateral sur	faces of reg	ular solids(2sheet)			
UNIT-I	V	Introduction to CAD	9	hours	
Introducti	on to Comp	outer Aided Drawing: Drawing practice using various commands	(Arra	y, block,	
scale, fille	et, chamfer,	hatch etc.), Absolute coordinate systems, Polar coordinate system	ns and	d relative	
coordinate	e systems, I	Drawing practice using dimensioning, Drawing of 2D planes; ci	rcle, p	polygons,	
ellipse etc, Drawing practice using 3D primitives; Drawing of cone Prism, pyramid etc.; Create solids					
using extrude, revolve commands, Working drawings of various mechanical systems. (4 Sheets)					
UNIT-V Introduction to CREO				9 hours	
Introducti	on to CRE	O Parametric, features of CREO, concepts- modeling, parametr	ic, as	sociative,	
feature based, sketch entities- inference lines, center lines, circle, arc, ellipse, rectangle, slots, polygon,					
etc, sketch tools- fillet, chamfer, offset, trim, extend, split, mirror, move, copy, rotate, scale, stretch etc.					
dimensior	ning (4 Shee	ts)			
1					
Course	outcome	After completion of this course students will be able to			

CO 1	Apply the basic principles of engineering graphics to draw various types of Scales,	K ₁ ,			
	Cycloidal and involutes curves.	K ₂			
CO 2	Draw and develop the projections of points lines and planes.	K ₁ ,			
		K ₂			
CO 3	Draw orthographic projection of solids and their sections and draw the lateral	K ₃			
	surfaces.				
CO 4	Apply CAD software to draw 2D and 3D drawing.	K ₂			
CO 5	Apply CREO software to draw 2D and 3D drawing.	K ₂ ,			
		K ₃

		B.TECH FIRST YEAR				
Course Cod	e	AEC0201	LTP	Credits		
Course Title	<u>,</u>	Basic Electrical and Electronics Engineering	3 1 0	4		
Course ob	jectiv	ve:				
Pre-requis	 To provide the basics of DC and AC analysis of (Single phase and Three phase) electrical circuits. To study the basics of transformer and calculate its efficiency. To impart elementary knowledge of Power System Components, Earthing, and Energy Consumption. To provide the knowledge of Diode, Display devices, Op-Amp, Sensors, IoT and its application. Sites: Basic knowledge of 12th Physics and Mathematics 					
LINIT I		CIRCUIT ANALYSIS AND NETWORK THEOREMS		10		
	Conc source elem analy They	cept of network, Active and passive elements, voltage a ces, concept of linearity and linear network, unilateral an nents, source transformation, Kirchoff's Law: loop and nodal n ysis, star delta transformation, network theorems: Superposition venin's theorem, Norton's theorem, maximum power transfer the	nd current d bilateral nethods of n theorem, heorem.			
UNIT-II	STE	ADY STATE ANALYSIS OF AC CIRCUIT		10		
	represent	parallel RLC circuits, j-notation, Different types of power, po nance in series and parallel circuits.	is of series wer factor,			
	Thr curre	ee phase AC circuit: Advantages of three phase circuit, vent relations in star and delta connections.	oltage and			
UNIT-III	SING SYS Sing equa Intro syste ELC cons	GLE PHASE TRANSFORMER AND ELEMENTS OF TEM the Phase Transformer: Principle of operation, construct ation, equivalent circuit, losses and efficiency. oduction to Elements of Power System: General layout em, Components of Distribution system: Switch Fuse Unit (SI CB, MCCB, Importance of Earthing, Elementary calculations umption, Battery Backup.	POWER tion, EMF of Power FU), MCB, for energy	09		
UNIT-IV	SEM Intro Diod	IICONDUCTOR DIODE AND THEIR APPLICATIONS oduction of Semiconductors: Intrinsic and Extrinsic, P-N le: Depletion layer, V-I characteristics, Half and Full Waye rec	Junction tification.	10		

	Clippers, Breakdown Mechanism: Zener and Avalanche, Zener Diode as Shunt Regulator.					
	Display Devices Liquid Crystal Display (LCD), Light Emitting Diode (LED), Organic-Light Emitting Diode (O-LED), 7- segment display.					
UNIT	-V OPERATIONAL AMPLIFIERS Introduction, Op-Amp Basic, Practical Op-Amp Circuits (Inverting Amplifier, Noninverting Amplifier, Summing Amplifier, Integrator, Differentiator). Electronic Instrumentation	09				
	Digital Multimeter (DMM), Types of sensor, Introduction to IoT and its application.					
Cours	e autcome. After successful completion of this course students will be able	to				
Cour	be outcome. After succession completion of tims course students will be able	10				
CO 1	Apply the principle of KVL/KCL and network theorems for analysis of D.C					
	circuit.					
CO 2	Analyze the steady state behavior of single phase and three phase AC electrical					
	circuits.					
CO 3	Illustrate and analyze the working principles of a single phase transformer,					
	efficiency, and components of Power system, Earthing, and energy calculation.					
CO 4	Explain the construction, working principle, and application of PN junction diode, Zener diode and Display devices.					
CO 5	Explain the concept of Op-Amp, Digital multimeter, Sensors,IoT and its applications.					
Text l	books (Atleast3)

	B. TECH FIRST YEAR					
Course Co	ode	ACSE0201	L P	Т		Credit
Course Ti	tle	Programming for Problem Solving using C	3	1	0	4
Course ob	jecti	ve:The objective of the course is to make its stu	ıder	nts a	ıbl	e
1	To u	nderstand basic concepts of C-programming language				
2	To in	nplement C programs to solve complex problems				
3	To e	nhance debugging, analysing and problem-solving skil	ls			
4	To c	reate diversified solutions for real world applications u	sing	C la	ang	guage
5	To state struc	acquire the knowledge of variable allocation and ment, control flow, types, function, pointer, parar ture and file handling to solve real world problems	dbin nete	ding r pa	i, (assi	conditional ing, array,
Pre-requis	sites:	Students are expected to be able to open command	d pr	omp	ot v	window or
terminal win	ndow,	edit a text file, download and install software, a	and	und	ers	tand basic
programming	g conc	epts.				
		Course Contents / Syllabus				
UNIT-I	Bas	ic concepts				8hours
Introduction	to coi	nponents of a computer system: Memory, processor, I	/O I	Devi	ces	, operating
system, Cond	cept of	f Assembler, compiler, interpreter, linker and loader.				
Number Syst	tem: in	ntroduction to number system, binary arithmetic.				
Concept of a	lgoritl	nms, Flow Charts.				
UNIT-II	Inti	oduction to Programming				8 hours
Programming using C:applications of C programming, Structure of C program, Overview of						
compilation	and e	xecution process in an IDE, transition from algorithn	1 to	prog	gra	m, Syntax,
logical error	s and	I Run time errors, object and executable code, Tol	kens	of	С	language:
Keywords, id	lentifi	ers, constant, data types.				
Anithmatia		ions and manadance. One material amountain manadance of	nd			tivity type
conversion	nived	operands. Pitfalls/Issues with size of () usage	ina a	18800	cia	livity, type
	IIIXCu	operands, i mans/issues with sizeor () usage.				
UNIT-III	Dec	ision Control Statements, pre-processor dire	ecti	ves		8 hours
Conditional	Branc	hing: if, else-if, nested if - else, switch statements, us	e of	brea	ık a	and default
with switch.						
Iteration and	loops	:Concept of loops, for, while and do-while, multiple	loop	var	riat	oles, use of
break and continue statements, nested loop.						
Pre-processor directives: defining and calling macros, file inclusion, conditional compilation.						
Pointers: def	ining	and declaring pointer, pointer arithmetic and scaling, P	oint	er A	lia	sing.

UNIT-IV	Functions and Arrays	8 hours
---------	----------------------	---------

Functions: Concept of Sub-programming, function, types of functions, passing parameters to functions: call by value, call by reference, recursive functions, scope of variable, local and global variables, Nesting of Scope, Storage classes: Auto, Register, Static and Extern

Arrays: Array notation and representation (one and two dimensional), array using pointers, manipulating array elements, 2-d arrays used in matrix computation. Strings and C string library, Structure, union, Array of structures, Self-referential structures, passing arrays and structure as arguments

Searching techniques (Linear, Binary Search), Sorting Algorithms (Bubble, Insertion and Selection)

Introduction to dynamic memory allocation (malloc(), calloc(), realloc(), free())

UNIT-V File handling and Introduction to Embedded Programming	8 hours
--	---------

File handling: File Pointer, File I/O functions and modes, Input and Output using file pointers, Character Input and Output with Files.

Introduction to Embedded Programming: Embedded Introduction systems, to 8051microcontrolller, Installing the Keil software and loading the project, Configuring the simulator, Building the target, Running the simulation, Dissecting the program. Case Study: Intruder Alarm System.

Course ou	Course outcome: At the end of course, the student will be able to				
CO 1	Develop simple algorithms for arithmetic and logical problems.	K ₂			
CO 2	Implement and trace the execution of programs written in C language.	K ₁ , K ₂ , K ₄			
CO 3	Implement conditional branching and iteration	K ₃			
CO 4	Use function, arrays and structures to develop algorithms and programs.	K ₂ , K ₆			
CO 5	Use searching and sorting algorithm to arrange data and use file	K_2, K_4			
	handling for developing real life projects

B.TECH FIRST YEAR(Foreign Language)						
Course C	Code	AASL0202	LTP	Credit		
Course T	Title	French	200	02		
Course o	bjective:					
1	An introduction to French language and culture - Students will learn to understand and articulate in day to day, real-life situations.					
2		The course provides a foundation in the four basic skil (Listening, Speaking, Reading, and Writing) of langua	ls LSRW ge learning			
Pre-requ	isite:					
• The	e student	should be able to communicate in English.				
		Course Contents / Syllabus				
UNIT-I	Introduction to French 7 Hours					
≫ Ba	sic greetii	ngs and introductions				
≫ Dit	fferences	and similarities between English and French alpha	bets			
≫ Re	cognize a	nd spell simple words and phrases in French				
≫ Co	mmonly u	used nouns and adjectives				
UNIT-II	Vocabulary Building8 Hours					
≫ Int	roduce on	eself and others				
≫ Ide	entify, spe	ak and understand the days of the week/ months/ s	seasons/co	olours		
≫ Spe	eak and u	nderstand simple weather expressions				
≫ Un	derstand,	ask and answer about date of birth/ important date	es and age	;		
≫ Ide	entify, und	lerstand and write numbers from $1-60$				
Use the masculine and feminine of regular nouns and adjectives (petit/ grand/ blond/ rouge/ sympa)						
UNIT-II	I Eve	eryday Common Simple Sentences		7 Hours		

> Means of transport / basic directions > Listen to, understand, and respond to everyday conversation > Respond to questions about ourselves and family members > Use the singular and plural of regular nouns (-s). **UNIT-IV 10 Hours** Reading > Food, drink, groceries and meal > Everyday life/ telling time > Making appointments > Use definite and indefinite articles. **UNIT-V** Writing 8 Hours ➤ Fill in a simple form (fiched'inscription/ carte d'identité) > Describe pictures (Speak and Write) > Write a short text on oneself **Course outcome** At the end of the course students will be able to CO 1 Recognize the basic sounds, letters, numbers, words and phrases of French. CO 2 Develop basic French vocabulary CO 3 Use simple phrases in real life conversations CO 4 Read simple sentences Write simple sentences and fill in a form CO 5

> In the city/ naming places and buildings

Lab Title	Programming for Problem Solving Using C Lab 0	02	01
Course outco	me: At the end of course, the student will be ab	le to	1
CO 1	Write programs for arithmetic and logical problems.	K ₁ , K ₃	
CO 2	write programs for conditional branching, iteration and recursion	K ₂ , K ₃	
CO 3	Write programs using functions and synthesize a complete program using divide and conquer approach	K ₄	
CO 4	write programs using arrays, pointers and structures	K _{3,} K ₄	
CO 5	Write programs to perform input/output operations on files	K ₃ , K ₄	

List of Experiment:

S.No.	Fundamental Experiments
1.	WAP that calculate the simple interest and compound interest when principal, rate of
	interest and time are given.
2.	WAP that swaps values of two variables using a third variable and without using third
	variable
3.	WAP to compute the roots of quadratic equations.
4.	WAP that accepts the marks of 5 subjects and finds the percentage marks obtained by the
	student. It also prints grades according to the following criteria:
	Between 90-100%Print 'A'
	80-90%Print 'B'
	60-80%Print 'C'
	Below 60%Print 'D'
5.	WAP to simulate the calculator (Arithmetic operations: +, -, /, $*$).
6.	Write a menu driven program that computes the area of geometrical figures such as
	rectangle, square, circle and triangle.

7.	WAP to find the factorial of a given number.
8.	WAP to print the Fibonacci series.
9.	WAP to check whether the entered number is prime or not.
10.	WAP to convert the binary number to decimal number and vice versa
11.	WAP to print all Arm strong numbers from 1 to N.
	Arrays
12.	WAP to find the minimum and maximum element of the array.
13.	WAP to search an element in an array using Linear Search.
14.	Write programs to sort the elements of the array in ascending order using Bubble Sort technique.
15.	WAP to compute the multiplication of two matrices.
	Pointers and Functions
16.	WAP to swap the values of two numbers using the call by pointer.
17.	WAP to compute the factorial of the number using the recursive function factorial ().
18.	WAP to compute the length of the string using the user defined function xstrlen().
19.	WAP to concatenate two strings using the user defined function xstrcat().
	Strings and Structures
20.	WAP to reverse the string. Also check whether the given string is in palindrome or not.
21.	WAP to create structure of a student having member name, roll number, age, marks. Also, create an array of structure of 50 students and display the detail of all the students having marks more than 70.
	File Handling
22.	WAP to copy the contents of one file onto another file.
23.	WAP to compare the contents of two files and determine whether they are same or not.
24.	WAP to check whether the given word exist in a file or not. If yes, then find the number of times it occurs.

	Dynamic Memory Allocation
25.	WAP to create an array using dynamic memory allocation.
	Embedded C
26.	Installation and working with Keil.
27.	Implement Intruder alarm system.

Suggested list of Experiments									
(At least 10 experiments to be performed)									
Sr. No.	Name of Experiments								
1	To perform facing, turning, taper turning, knurling, grooving and threading operations as per given drawing on lathe machine.								
2	To prepare a T-Shape and U-shape work piece by filing, sawing, drilling in Fitting shop.								
3	To cast a component using a single piece pattern in foundry shop,								
4	To study the G-M Codes for CNC machine and to perform different machining operations including facing, turning, grooving etc on CNC lathe.								
5	To cut a slo	t on CNC milling machine as per given draw	ving.						
6	To make a	nole of given diameter on CNC drilling mach	nine.						
7	To study co	nstruction and working of FDM 3D printing	machine.						
8	To study construction and working of SLA 3D printing machine.								
9	To study the development of drawings using 3D scanner.								
10	To make an air tight bottle cap by using injection moulding.								
11	. To study construction and working of six axis robot (KUKA Sim Pro 3.0.4).								
12	Practice on	pneumatic control system using single acting	g cylinder.
