### NOIDA INSTITUTE OF ENGINEERING AND TECHNOLOGY, GREATER NOIDA

(An Autonomous Institute)

# Affiliated to DR. A.P.J. ABDUL KALAM TECHNICAL UNIVERSITY, LUCKNOW

**Evaluation Scheme & Syllabus** 

For

# B. Tech in Computer Science and Engineering (Data Science)(DS)First Year

(Effective from the Session: 2020-21)

### NOIDA INSTITUTE OF ENGINEERING & TECHNOLOGY, GREATER NOIDA (An Autonomous Institute)

# **<u>B. TECH. - CSE(DS)</u>** Evaluation Scheme

# <u>B. TECH. – CSE (DS)</u> <u>Evaluation Scheme</u> <u>SEMESTER II</u>

Mini Project or Internship (3-4 weeks) shall be conducted during summer break after II semester and will be assessed during III semester

\* List of MOOCs (NPTEL) Based Recommended Courses for first year B. Tech Students

1. Developing Soft Skills and personality-Odd Semester-8 Weeks-3 Credits

2. Enhancing Soft Skills and personality-Even Semester-8 Weeks-3 Credits

#### \* AICTE Guidelines in Model Curriculum:

After successful completion of 166 credits, a student shall be eligible to get Under Graduate degree in Engineering. A student will be eligible to get Under Graduate degree with Honours only, if he/she completes additional university recommended courses only (Equivalent to 20 credits; NPTEL Courses of 4 Weeks, 8 Weeks and 12 Weeks shall be of 2, 3 and 4 Credits respectively) through MOOCs. For registration to MOOCs Courses, the students shall follow NPTEL Site http://nptel.ac.in/ as per the NPTEL policy and norms. The students can register for these courses through NPTEL directly as per the course offering in Odd/Even Semesters at NPTEL. These NPTEL courses (recommended by the University) may be cleared during the B. Tech degree program (not necessary one course in each semester). After successful completion of these MooCs courses the students, shall, provide their successful completion NPTEL status/certificates to the University (COE) through their college of study only. The student shall be awarded Hons. Degree (on successful completion of MOOCS based 20 credit) only if he/she secures 7.50 or above CGPA and passed each subject of that Degree Programme in single attempt without any grace marks.

\*Foreign Language :

- 1. AASL0202 French
- 2. AASL0203 German
- 3. AASL0204 Japanese

	<b>B. TECH FIRST YEAR</b>		
Course Code	AAS0104 L T	Р	Credit
Course Title	Mathematical Foundations - I 3 1	0	4
Course object	tive: The objective of this course is to familiarize the grad	uate en	gineers with
techniques in line	ar algebra, differential calculus-I, differential calculus-II and ver	ctor spa	ce. It aims to
	ts with standard concepts and tools from intermediate to adva		
	ackle more advanced level of mathematics and applications the	hat they	would find
useful in their dis	•		
Pre-requisites	:Knowledge of Mathematics upto 12 <sup>th</sup> standard.		
	Course Contents / Syllabus		
UNIT-I	Matrix Algebra		8 hours
Types of Matrice	s: Symmetric, Skew-symmetric and Orthogonal Matrices; Comp	lex Mat	rices,
	nk of matrix using elementary transformations,System o		-
	quation, Cayley-Hamilton Theorem and its application,	Eigen	values and
eigenvectors, Dia	gonalisation of a Matrix.	1	
UNIT-II	Vector Space		10 hours
Vector spaces, ba	sis, dimension, linear transformations, rank and nullity theorem,	inner pr	oduct
spaces and Ortho			
UNIT-III	Differential Calculus-I		8 hours
Successive Diffe	rentiation (nth order derivatives), Leibnitz theorem and itsapp	lication	Asymptotes,
Curve tracing: (	Cartesian and Polar co-ordinates, Partial derivatives, Total	derivat	tive, Euler's
Theorem for hom	ogeneous functions.		
UNIT-IV	Differential Calculus-II		8 hours
Taylor and Macla	urin's theorems for a function of one and two variables, Jacobian	s, Appro	oximation
oferrors.Maxima	and Minima offunctions of several variables, Lagrange Method	of Mult	pliers.
TINIT V	Aptitude-I		8 hours
UINII-V			0 nours
	Percentage, Profit, loss & discount, Average, Number &	k Series	
UNIT-V Simplification , decoding	Percentage, Profit, loss & discount, Average, Number &	k Series	
Simplification , decoding	Percentage, Profit, loss & discount, Average, Number & ne: After completion of this course students are able to

	B.TECH FIRST YEAR		
Course Code	AEC0101	LTP	Credits
Course Title	Basic Electrical and Electronics Engineering	3 1 0	4
Course obje	ctive:		
	<ol> <li>To provide the basics of DC and AC analysis of (Sin electrical circuits.</li> <li>To study the basics of transformer and calculate its eta.</li> <li>To impart elementary knowledge of Power System Energy Consumption.</li> <li>To provide the knowledge of Diode, Display devices, Capplication.</li> </ol>	fficiency. Componen	nts, Earthing, an
Pre-requisite	es: Basic knowledge of 12th Physics and Mathematics		
	Course Contents / Syllabus		
UNIT-I	D.C CIRCUIT ANALYSIS AND NETWORK THEORE	MS	10
	Concept of network, Active and passive elements, volt current sources, concept of linearity and linear network, u and bilateral elements, source transformation, Kirchoff's La and nodal methods of analysis, star delta transformation, theorems: Superposition theorem, Thevenin's theorem, I theorem, maximum power transfer theorem.	nilateral w: loop network	
UNIT-II	STEADY STATE ANALYSIS OF AC CIRCUIT		10
	<ul> <li>Single phase AC circuit: AC fundamentals, concept of phasor representation of sinusoidally varying voltage and analysis of series and parallel RLC circuits, j-notation, I types of power, power factor, resonance in series and circuits.</li> <li>Three phase AC circuit: Advantages of three phase voltage and current relations in star and delta connections.</li> </ul>	current, Different parallel	
UNIT-III	SINGLE PHASE TRANSFORMER AND ELEMEN	TS OF	09
U111-111	<ul> <li>POWER SYSTEM</li> <li>Single Phase Transformer: Principle of operation, cons</li> <li>EMF equation, equivalent circuit, losses and efficiency.</li> <li>Introduction to Elements of Power System: General la</li> <li>Power system, Components of Distribution system: Switt</li> <li>Unit (SFU), MCB, ELCB, MCCB, Importance of E</li> <li>Elementary calculations for energy consumption, Battery B</li></ul>	truction, ayout of ch Fuse Earthing,	07

UNIT-I	V SEMICONDUCTOR DIODE AND THEIR APPLICATIONS	10
	Introduction of Semiconductors: Intrinsic and Extrinsic, P-N Junction Diode: Depletion layer, V-I characteristics, Half and Full Wave rectification, Clippers, Breakdown Mechanism: Zener and	
	Avalanche, Zener Diode as Shunt Regulator.	
	Display Devices	
	Liquid Crystal Display (LCD), Light Emitting Diode (LED), Organic- Light Emitting Diode (O-LED), 7- segment display.	
UNIT-V	<b>OPERATIONAL AMPLIFIERS</b>	09
	, Introduction, Op-Amp Basic, Practical Op-Amp Circuits (Inverting Amplifier, Noninverting Amplifier, Summing Amplifier, Integrator, Differentiator). Electronic Instrumentation	
	Digital Multimeter (DMM), Types of sensor, Introduction to IoT and its application.	
Course	<b>outcome:</b> After successful completion of this course students will Apply the principle of KVL/KCL and network theorems for analysi	
01	D.C circuit.	
CO 2	Analyze the steady state behavior of single phase and three phase AC elect circuits.	
CO 3	Illustrate and analyze the working principles of a single phase transfor efficiency, and components of Power system, Earthing, and energy calculat	ion.
CO 4	Explain the construction, working principle, and application of PN junc diode, Zener diode and Display devices.	
CO 5	Explain the concept of Op-Amp, Digital multimeter, Sensors,IoT and applications.	1 its

UNIT-V	File and Exception handling	8 hours
Files and I	Directories: Introduction to File Handling in Python, Reading and	Writing files,
Additional	file methods, Working with Directories.	
Exception	Handling, Errors, Run Time Errors, Handling IO Exception,	, Try-except
statement,	Raise, Assert	
Searching	&Sorting:Simple search & Binary search,Selection Sort, Merge Sort	
Course o	utcome: At the end of course, the student will be able t	0
CO 1	Write simple python programs.	<i>K</i> <sub>2</sub> , <i>K</i> <sub>3</sub>
<i>CO 2</i>	Develop python programs using decision control statements	K <sub>3</sub> , K <sub>6</sub>
<i>CO 3</i>	Implement user defined functions and modules in python	<i>K</i> <sub>2</sub>
<i>CO</i> 4	Implement python data structures –lists, tuples, set, dictionaries	<i>K</i> <sub>3</sub>
<i>CO</i> 5	Perform input/output operations with files in python and implement searching, sorting and merging algorithms	K <sub>3</sub> , K <sub>4</sub>

Course (	Code	AASL0101	LTP	Credit
Course 7		Professional Communication	200	02
Course o				
1	•	The objective of the course is to ensure that the students can communicate effectively, in clear and correct English, in a st appropriate to the occasion.		
2	•	The course provides a foundation in the four basic skills LSF (Listening, Speaking, Reading, Writing) of language learning aligned to an International Business English Certification.		
Pre-requ	isites:			
gra ● All	mmatic the stu	nt should be able to communicate in basic English and have al structures of English. dents must take an assessment exam to ascertain their level of brief induction course in it.		-

Speakir	ng with confidence	
UNIT-V	Public Speaking	10 Hours
	nents of effective speaking in the workplace	
	speaking – Kinesics, Chronemics, Proxemics	
Voice d	•	
	of Presentation, PPT support Presentations & Etiquette	
	an Interview	
Course outc		
At the end of the	ne course students will be able to	
CO 1	Understand the basic objective of the course and	
	comprehend texts for professional reading tasks in	
	preparation for an International Certification in Business English.	
CO 2	Write professionally in simple and correct English.	
CO 3	Interpret listening tasks for better professional competence.	
CO 4	Recognize the elements of effective speaking with emphasis	
	on applied phonetics.	
CO 5	Apply the skill of speaking at the workplace.

List of	Experii	nent:						
		List of Fundamental Programs						
S.N.		Program Title		Category				
1	Python Program to print "Hello Python"							
2	Python	Program to read and print values of variables of different of	lata types.	Basic				
3	Python Program to perform arithmetic operations on two integer numbers							
4	Python Program to Swap two numbers							
5	Python	Program to convert degree Fahrenheit into degree Celsius		Operators				
6	Python	Program to demonstrate the use of relational operators.		Operators				
7	Python	Program to understand the working of bitwise and logical	operators.	Operators				
8	Python	Program to calculate roots of a quadratic equation.		Conditional				
9	Python	Program to check whether a year is leap year or not.		Conditiona				
10	Python	Program to find smallest number among three numbers.		Conditional				
11	Python	Program to make a simple calculator.		Conditiona				
12	Python	Program to find the factorial of an integer number.		Loop				
13	Python	Program to find the reverse of an integer number.		Loop				
14	Python	Program to find and print all prime numbers in a list.		Loop				
15	Python	Program to Find the Sum of 'n' Natural Numbers		Loop				
16	Python	Program to print sum of series: $-1/2 + 2/3 + 3/4 ++n/(n + 1)/2$	n+1)	Loop				
17	Python	Program to print pattern using nested loop		Loop				
18	Python	Program to Display the multiplication Table of an Integer		Loop				
19	Python	Program to Print the Fibonacci sequence		Loop				
20	Python	Program to Check Armstrong Number		Loop				
21	Python	Program to Find Armstrong Number in an Interval		Loop				
22	Python	Program to check Using function whether a passed string a pome or not	is	Function				

23	Python Program using function that takes a number as a parameter, check	Function
	whether the number is prime or not.	
24	PythonProgram using function that computes gcd of two given numbers.	Function
25	Python Program to Find LCM of two or more given numbers.	Function
26	Python Program to Convert Decimal to Binary, Octal and Hexadecimal	Function
27	Python Program To Find ASCII value of a character	Basic
28	Python Program to Display Calendar	Loop
29	Python Program to Add Two Matrices	Loop
30	Python Program to Multiply Two Matrices	Loop
31	Python Program to Transpose a Matrix	Loop
32	Python Program to Sort Words in Alphabetic Order	Sorting
33	Python Program to Display Fibonacci Sequence Using Recursion	Recursion
34	Python Program to Find Factorial of Number Using Recursion	Recursion
35	Python Program that implements different string methods.	String
36	Python Program that validates given mobile number. Number should start	String
	with 7, 8 or 9 followed by 9 digits.	
37	Python Program to implement various methods of a list.	List
38	Python Program that has a nested list to store toppers details. Edit the details	List
	and reprint them.	
39	Python Program to swap two values using tuple assignment.	Tuple
40	Python Program that has a set of words in English language and their	Dictionary
	corresponding Hindi words. Define dictionary that has a list of words in	5
	Hindi language and their corresponding Hindi Sanskrit. Take all words from	
	English language and display their meaning in both languages.	
41	Python Program that inverts a dictionary.	Dictionary
42	Python Program that reads data from a file and calculates percentage of	File
	white spaces, lines, tabs, vowels and consonants in that file.

				our I	Pleas	e hel	p then	n to calculate.					
procedure of th	ne calculation is	s described	1 bel	0w. I	Ieas	Safety Index calculation							
procedure of th Safety Index ca	ne calculation is alculation							0 1					
procedure of th Safety Index ca Assume a pers	ne calculation is alculation on stands on gr	cassland(x)	) and	l a Sr	nilod	lon e	-	s from the cage situated on gates before the Smilodor					

able to catch him, then the grassland(x) is called safe else it is unsafe. A person and a Smilodon both take 1 second to move from one area to another adjacent area(top, bottom, left or right) but a person can move only over grasslands though Smilodon can move over grasslands and mountains.

If any grassland is unreachable for Smilodon(maybe it is unreachable for any person also), to increase safe index value Club Authority use to mark those grasslands as safe land. Explained below

w	М	G	G	G	G	
М	G	w	G(x)	м	м	
G	W	G	G(y)	G	G	
w	G(z)	w	М	w	G	

For the above layout, there is only one gate at (4,6)

Y is the position of Smilodon's cage

X is not safe area

Z is a safe area as is it not possible for smilodon to reach z

Safety index=(total grassland areas which are safe\*100)/total grassland area

#### Constraints

- i.  $3 \le R, C \le 10^3$
- ii. Gates are situated on grasslands only and at the edge of the park
- iii. The cage is also situated in grassland only
- iv. The position of the cage and the position of three gates are different

### **Input Format**

The first line of the input contains two space-separated integers R and C, denoting the size of the park (R\*C)

The second line contains eight space-separated integers where

First two integers represent the position of the first gate

3rd and 4th integers represent the position of second gate

5th and 6th integers represent the position of third gate respectively

The last two integers represent the position of the cage

Next R lines, each contains space separated C number of characters. These R lines represent the park layout.

### Output

Safety Index accurate up to two decimal places using Half-up Rounding method

### Explanation Example 1 Input 4 4 1 1 2 1 3 1 1 3 G GGG

	G W W M
	GGWW
	MGMM
	Output
	75.00
3.	Bank Compare
	Problem Description
	There are two banks; Bank A and Bank B. Their interest rates vary. You have received offers from both bank in terms of annual rate of interest, tenure and variations of rate of
	interest over the entire tenure.
	You have to choose the offer which costs you least interest and reject the other.
	Do the computation and make a wise choice.
	The loan repayment happens at a monthly frequency and Equated Monthly Installment
	(EMI) is calculated using the formula given below :
	EMI = loanAmount * monthlyInterestRate/( 1 - 1 / (1
	+monthlyInterestRate)^(numberOfYears * 12))
	Constraints
	i. $1 \le P \le 1000000$ ii. $1 \le T \le 50$ iii. $1 \le N1 \le 30$ iv. $1 \le N2 \le 30$
	Input Format
	First line : P – principal (Loan Amount)
	Second line : T – Total Tenure (in years).
	Third Line : N1 is number of slabs of interest rates for a given period by Bank A. First slab starts from first year and second slab starts from end of first slab and so on.
	Next N1 line will contain the interest rate and their period.
	After N1 lines we will receive N2 viz. the number of slabs offered by second bank.
	Next N2 lines are number of slabs of interest rates for a given period by Bank B. First slab
	starts from first year and second slab starts from end of first slab and so on.
	The period and rate will be delimited by single white space.
	Output
	Your decision – either Bank A or Bank B.
	Explanation
	Example 1
	Input

	10 6.9
	5 8.5
	5 7.9
	Output
	Bank B
4.	Cross Words
7.	Problem Description
	-
	A crossword puzzle is a square grid with black and blank squares, containing clue
	numbers (according to a set of rules) on some of the squares. The puzzle is solved by
	obtaining the solutions to a set of clues corresponding to the clue numbers.
	The solved puzzle has one letter in each of the blank square, which represent a sequence of
	letters (consisting of one or more words in English or occasionally other languages)
	running along the rows (called "Across", or "A") or along the columns (called "Down" or
	"D"). Each numbered square is the beginning of an Across solution or a Down solution.
	Some of the across and down solutions will intersect at a blank square, and if the solutions
	are consistent, both of them will have the same letter at the intersecting square.
	In this problem, you will be given the specifications of the grid, and the solutions in some
	random order. The problem is to number the grid appropriately, and associate the answers
	consistently with the clue numbers on the grid, both as Across solutions and as Down
	solutions, so that the intersecting blank squares have the same letter in both solutions.
	Rules for Clue Numbering
	The clue numbers are given sequentially going row wise (Row 1 first, and then row2 and
	so on)
	Only blank squares are given a clue number
	A blank square is given a clue number if either of the following conditions exist (only one
	number is given even if both the conditions are satisfied)
	It has a blank square to its right, and it has no blank square to its left (it has a black square
	to its left, or it is in the first column). This is the beginning of an Across solution with that
	number
	It has a blank square below it, and no blank square above it (it has a black square above it
	or it is in the first row). This is the beginning of a Down solution with that number
	Constraints
	i. 5<=N<=15
	ii. 5<=M<=50
	Input Format
	The input consists of two parts, the grid part and the solution part
	The first line of the grid part consists of a number, N, the size of the grid (the overall grid
	is N x N) squares. The next N lines correspond to the N rows of the grid. Each line is
	comma separated, and has number of pairs of numbers, the first giving the position

(column) of the beginning of a black square block, and the next giving the length of the block. If there are no black squares in a row, the pair "0,0" will be specified. For example, if a line contains "2,3,7,1,14,2", columns 2,3,4 (a block of 3 starting with 2), 7 (a block of 1 starting with 7) and 14,15 (a block of 2 starting with 14) are black in the corresponding row.

The solution part of the input appears after the grid part. The first line of the solution part contains M, the number of solutions. The M subsequent lines consist of a sequence of letters corresponding to a solution for one of the Across and Down clues. All solutions will be in upper case (Capital letters)

#### Output

The output is a set of M comma separated lines. Each line corresponds to a solution, and consists of three parts, the clue number, the letter A or D (corresponding to Across or Down) and the solution in to that clue (in upper case)

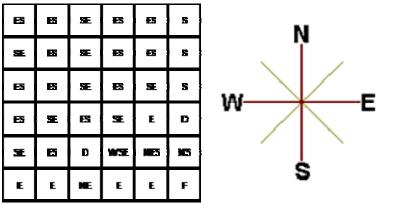

The output must be in increasing clue number order. If a clue number has both an Across and a Down solution, they must come in separate lines, with the Across solution coming before the Down solution.

	Explanation

	3,D,EVADE
	4,A,PLEAS
	5,A,EVEN
5.	Skateboard
	Problem Description
	The amusement park at Patagonia has introduced a new skateboard competition. The

skating surface is a grid of N x N squares. Most squares are so constructed with slopes that it is possible to direct the skateboard in any of up to three directions of the possible four (North ,East, South or West, represented by the letters N, E, S and W respectively). Some squares however have a deep drop from the adjacent square from which it is impossible to go to any adjacent square. These are represented by D (for Drop) in that square. The objective is to maneuver the skateboard to reach the South East corner of the grid, marked F.

Each contestant is given a map of the grid, which shows where the Drop squares are (marked D), where the Final destination is (marked F), and, for each other square, the directions it is possible to maneuver the skateboard in that square.

The contestant draws lots to determine which of the squares on the boundaries of the grid on the North or the West of the grid (the top or the left in the diagram) he or she should start in. Then, using a map of the grid, he or she needs to try to reach the South East corner destination by maneuvering the skateboard.

In some cases, it is impossible to reach the destination. For example, in the diagram above, if one starts at the North East corner (top right in the diagram), the only way is to go is South, until the Drop square is reached (three squares South), and the contestant is stuck there.

A contestant asks you to figure out the number of squares at the North or West boundary (top or left boundary in the map) from which it is feasible to reach the destination.

#### Constraints

i. 5<=N<=50

#### **Input Format**

The first line of the input is a positive integer N, which is the number of squares in each side of the grid.

The next N lines have a N strings of characters representing the contents of the map for that corresponding row. Each string may be F, representing the Final destination, D, representing a drop square, or a set of up to three of the possible four directions (N,E,S,W)

	in some nondern orden. These nonresent the directions in which the contestant con
	in some random order. These represent the directions in which the contestant can
	maneuver the skateboard when in that square.
	<b>Output</b> The output is one line with the number of North or West border squares from which there
	is a safe way to maneuver the skateboard to the final destination.

	E,E,NE,E,E,F
	Output
	9
6.	Chakravyuha
	Problem Description
	During the battle of Mahabharat, when Arjuna was far away in the battlefield, Guru Drona
	made a Chakravyuha formation of the Kaurava army to capture YudhisthirMaharaj.
	Abhimanyu, young son of Arjuna was the only one amongst the remaining Pandava army
	who knew how to crack the Chakravyuha. He took it upon himself to take the battle to the
	enemies.
	Abhimanyu knew how to get power points when cracking the Chakravyuha. So great was
	his prowess that rest of the Pandava army could not keep pace with his advances. Worried
	at the rest of the army falling behind, YudhisthirMaharaj needs your help to track of
	Abhimanyu's advances. Write a program that tracks how many power points Abhimanyu
	has collected and also uncover his trail
	A Chakravyuha is a wheel-like formation. Pictorially it is depicted as below
	Fig 1. Chakravyuha
	A Chakravyuha has a very well-defined co-ordinate system. Each point on the co-ordinate

system is manned by a certain unit of the army. The Commander-In-Chief is always located at the centre of the army to better co-ordinate his forces. The only way to crack the Chakravyuha is to defeat the units in sequential order.

A Sequential order of units differs structurally based on the radius of the Chakra. The radius can be thought of as length or breadth of the matrix depicted above. The structure i.e. placement of units in sequential order is as shown below

1	2	3	4	5
16	17	18	19	6
15	24	25	20	7
14	23	22	21	8
13	12	11	10	9

#### Fig 2. Army unit placements in Chakravyuha of size 5

The entry point of the Chakravyuha is always at the (0,0) co-ordinate of the matrix above. This is where the 1st army unit guards. From (0,0) i.e. 1st unit Abhimanyu has to march towards the center at (2,2) where the 25th i.e. the last of the enemy army unit guards. Remember that he has to proceed by destroying the units in sequential fashion. After destroying the first unit, Abhimanyu gets a power point. Thereafter, he gets one after destroying army units which are multiples of 11. You should also be a in a position to tell YudhisthirMaharaj the location at which Abhimanyu collected his power points.

#### **Input Format:**

First line of input will be length as well as breadth of the army units, say N

#### **Output Format:**

- Print NxN matrix depicting the placement of army units, with unit numbers delimited by (\t) Tab character
- Print Total power points collected
- Print coordinates of power points collected in sequential fashion (one per line)
- Constraints:  $0 < N \leq 100$

The task is to find the minimum sum of Products of two arrays of the same size, given that k modifications are allowed on the first array. In each modification, one array element of the first array can either be increased or decreased by 2.

**Note-** the product sum is Summation (A[i]\*B[i]) for all i from 1 to n where n is the size of both arrays

### Input Format:

- i. First line of the input contains n and k delimited by whitespace
- ii. Second line contains the Array A (modifiable array) with its values delimited by spaces
- iii. Third line contains the Array B (non-modifiable array) with its values delimited by spaces

### **Output Format:**

Output the minimum sum of products of the two arrays

### **Constraints:**

i.  $1 \le N \le 10^{5}$ 

ii. 
$$0 \le |A[i]|, |B[i]| \le 10^{5}$$

iii.  $0 \le K \le 10^{9}$ 

# Sample Input and Output

S.No.	Input	Output
1	3 5	-31
	12-3	
	-2 3 -5	
2	53	25
	23454	
	3 4 2 3 2	

# **Explanation for sample 1:**

Here total numbers are 3 and total modifications allowed are 5. So we modified A[2], which is -3 and increased it by 10 (as 5 modifications are allowed). Now final sum will be (1 \* -2) + (2 \* 3) + (7 \* -5)

-2 + 6 - 35

-31

-31 is final answer.

# **Explanation for sample 2:**

Here total numbers are 5 and total modifications allowed are 3. So we modified A[1], which is 3 and decreased it by 6 (as 3 modifications are allowed).

Now final sum will be

(2 \* 3) + (-3 \* 4) + (4 \* 2) + (5 \* 3) + (4 \* 2)6 - 12 + 8 + 15 + 8 25

25 is final answer.

12.	Consecutive Prime Sum								
	Problem Description								
	Some prime numbers can be expressed as a sum of other consecutive prime numbers. For								
	example, $5 = 2 + 3$ , $17 = 2 + 3 + 5 + 7$ , $41 = 2 + 3 + 5 + 7 + 11 + 13$ . Your task is to find								
				hich satisfy this property are present in the range 3 to 1					
	-			ation should always start with number 2.					
				ber of prime numbers that satisfy the above-mentione					
	property in a	given ran	ge.						
	<b>S.</b>	Input	Output	Comment					
	No.								
	1	20	2	(Below 20, there are 2 such members: 5 and 17)					
				5 = 2 + 3					
				17 = 2 + 3 + 5 + 7					
	2	15	1						
		·							
	Input Forma	nt:							
	First line con	tains a nu	mber N						
	Output Format:								
	Print the total	l number o	of all such	prime numbers which are less than or equal to N.					
	Constraints:								
	2 <n<=12,000,000,000< th=""></n<=12,000,000,000<>								
13.	kth largest fa		ſ						
	Problem Des	-							
	-	-		a factor of another positive integer N if when N is divide					
	-			zero. For example, for number 12, there are 6 factors 1, 2					
				eger k has at least two factors, 1 and the number					
		wo positiv	ve integers	N and k, write a program to print the kth largest factor of					
	N.								
	Input Format:								
	The input is a comma-separated list of positive integer pairs (N, k)								
	Output Format:								
	The kth highest factor of N. If N does not have k factors, the output should be 1.								
	Constraints:								
	1 <n<10000000000. 1<k<600.="" are<="" assume="" can="" factors="" have="" n="" no="" prime="" td="" that="" which="" will="" you=""></n<10000000000.>								
	larger than 13.								
	Example 1								
	Input:								
	Input: 12,3 Output:								

	Explanation:
	N is 12, k is 3. The factors of 12 are (1,2,3,4,6,12). The highest factor is 12 and the third
	largest factor is 4. The output must be 4
14.	Coins Distribution Question (or Coins Required Question)
	Problem Description
	Find the minimum number of coins required to form any value between 1 to N, both
	inclusive. Cumulative value of coins should not exceed N. Coin denominations are 1
	Rupee, 2 Rupee and 5 Rupee.
	Let's understand the problem using the following example. Consider the value of N is 13,
	then the minimum number of coins required to formulate any value between 1 and 13, is 6.
	One 5 Rupee, three 2 Rupee and two 1 Rupee coins are required to realize any value
	between 1 and 13. Hence this is the answer.
	However, if one takes two 5 Rupee coins, one 2 rupee coins and two 1 rupee coins, then to
	all values between 1 and 13 are achieved. But since the cumulative value of all coins
	equals 14, i.e., exceeds 13, this is not the answer.
	Input Format
	A single integer value
	Output Format
	Four Space separated Integer Values
	1st – Total Number of coins
	2nd – number of 5 Rupee coins.
	3rd – number of 2 Rupee coins.
	4th – number of 1 Rupee coins.
	Constraints
	0 <n<1000< th=""></n<1000<>
	Sample Input:
	13
	Sample Output:
	6132
S. NO.	
	Debugging Experiments
1.	Write error/output in the following code.
	<i>H</i> <b>1 b b c c c c c c c c c c</b>
	# abc.py
	deffunc(n): return $n + 10$
	func('Hello')
2.	Write the output of the following code.
	the super of the following code.

	if not a or b:
	print 1
	elif not a or not b and c:
	print 2
	elif not a or b or not b and a:
	print 3
	else:
	print 4
3.	Write error/output in the following code.
	count = 1
	defdoThis():
	global count
	for i in (1, 2, 3):
	$\operatorname{count} += 1$
	doThis()
	print count
4.	Write the output of the following code.
	check1 = ['Learn', 'Quiz', 'Practice', 'Contribute']
	check2 = check1
	check2 = check1 check3 = check1[:]
	check2[0] = 'Code'
	check3[1] = 'Mcq'
	a = 0
	count = 0
	for c in (check1, check2, check3):
	if c[0] == 'Code':
	$\operatorname{count} += 1$
	if c[1] == 'Mcq':
	$\operatorname{count} += 10$
	print count
5.	print count What is the output of the following program?

	D = dict()
	for x in enumerate(range(2)):
	D[x[0]] = x[1]
	D[x[1]+7] = x[0]
	print(D)
6.	What is the output/error in the following program?
	$D = \{1 : 1, 2 : '2', '1' : 1, '2' : 3\}$
	D['1'] = 2
	print(D[D[Str(D[1])]])
7.	What is the output/error in the following program?
	$D = \{1 : \{'A' : \{1 : "A"\}, 2 : "B"\}, 3 : "C", 'B' : "D", "D": 'E'\}$
	print(D[D[1][2]]], end = " ")
	print(D[D[1]["A"][2]])
8.	What is the output/error in the following program?
	D = dict()
	for i in range (3):
	for j in range(2):
	D[i] = j
	print(D)
9.	What is the output/error in the following program?
	$\mathbf{x} = ['\mathbf{a}\mathbf{b}', '\mathbf{c}\mathbf{d}']$
	for i in x:
	x.append(i.upper())
	print(x)
10.	What is the output/error in the following program?
	i = 1
	while True:
	if i%3 == 0:
	break
	print(i)
	i += 1

Semester Exam., PE: Practical End Semester Exam.

UNIT-V	Fiber Optics & Laser	8 hours
Fiber Optic	s: Introduction to fiber optics, Acceptance angle, Numerical aperture, Normalized	d frequency,
Classificatio	on of fiber, Attenuation and Dispersion in optical fibers.	
Laser: Abso	orption of radiation, Spontaneous and stimulated emission of radiation, Einstein's	coefficients,
Population	inversion, Ruby Laser, He-Ne Laser.	
Recent appl	icationsof optical fibersandLaser(Qualitative):Laser-guided UAV (Drone).	
Course of	<b>atcome:</b> After completion of this course students will be able to:	
CO 1	Solve the relativistic mechanics problems	K1,K2,K3
CO 2	Apply the concept of quantum mechanics	K1,K2,K3
CO 3	Apply the laws of optics and their application in various processes	K1,K2,K3
CO 4	Define the laws of semiconductors.	K1,K2
CO 5	Explain the working of modern engineering tools and techniques of optical fiber and laser.	K1,K2

UNIT-V	Logic and Argumentation	8 HOURS
The argument	, claim, and statement, identifying premises and conclusion, truth and logi	c conditions,
valid/invalid a	arguments, strong/weak arguments, deductive argument, argument diagr	ams, logical
reasoning, sci	entific reasoning, logical fallacies, propositional logic, probability, an	ld judgment,
obstacles to cr	itical thinking. Group activity/role plays on evaluating arguments	
Course out	come: After completion of this course, students will be able to	
CO 1	Develop a strong understanding of the design process and apply it in a variety of business settings	K2,K3
CO 2	Analyze self, culture, teamwork to work in a multidisciplinary environment and exhibit empathetic behavior	K3
CO 3	Formulate specific problem statements of real time issues and generate innovative ideasusing design tools	K3,K6
CO 4	Apply critical thinking skills in order to arrive at the root cause from a set of likely causes	K3
CO 5	Demonstrate an enhanced ability to apply design thinking skills for evaluation of claims and arguments	K3,K4

	B. TECH FIRST YEAR					
<b>Course Code</b>	Course Code ACSE0202 L T P Credi					
<b>Course Title</b>	Problem solving using Advanced Python 3 1	0	4			
Course object	tive: The objective of the course is to make its studen	ts ab	le			
1	To learn the Object Oriented Concepts in Python					
2	To learn the concept of reusability through inheritance and polymorphism					
3	To impart the knowledge of functional programming					
4	To learn the concepts of designing graphical user interfaces					
5	To explore the knowledge of standard Python libraries					
Pre-requisites	S:Students are expected to have basic knowledge of program	ming	g concepts			
of python progra	mming.					
	<b>Course Contents / Syllabus</b>					
UNIT-I	Classes and Objects		8 hours			
Introduction: Py	thon Classes and objects, User-Defined Classes, Encapsulation	on, D	ata hiding			
, Class Variable	s and Instance Variables, Instance methods, Class method,	static	methods,			
constructor in p	ython, parametrized constructor, Magic Methods in python	, Ob	ject as an			
argument, Instan	ces as Return Values, namespaces					
UNIT-II	Object Oriented Concepts		8 hours			
	Method overriding, abstract class, MRO and super ( ), Polymontrospecting types, Introspecting objects, Introspecting sc Dect tools	-				
UNIT-III	Functional Programming		8 hours			
Map, filter, Redu Co-routines, iter	ice, Comprehensions, Immutability, Closures and Decorators	, gen	erators.			
	ators, Declarative programming					
UNIT-IV	GUI Programming

	B.TECH FIRST YEAR(Foreign Language)			
<b>Course Code</b>	AASL0202	L	ТР	Credit
Course Title	French	2	0 0	02
Course object	ive:			
1	An introduction to French language and culture - Students will learn to understand and articulate in day to day, real- life situations.			
2	The course provides a foundation in the four basic skills LSRW (Listening, Speaking, Reading, and Writing) of language learning.			
• The stud	lent should be able to communicate in English. Course Contents / Syllabus			
UNIT-I	Introduction to French		7 H	lours
≫ Basic gi	reetings and introductions			
➤ Differer	ces and similarities between English and French alpha	be	ts	
≫ Recogn	ze and spell simple words and phrases in French			
≫ Commo	nly used nouns and adjectives			
UNIT-II	Vocabulary Building			8 Hours
≫ Introduc	e oneself and others			
➤ Identify	, speak and understand the days of the week/ months/ s	sea	sons/c	colours
≫ Speak a	nd understand simple weather expressions			
➤ Underst	and, ask and answer about date of birth/ important date	es a	and ag	ge
➤ Identify	, understand and write numbers from $1-60$			
	masculine and feminine of regular nouns and adjective ouge/ sympa)	es (	(petit/	grand/

UNIT-III	<b>Everyday Common Simple Sentences</b>	7 Hours
> In the c	ity/ naming places and buildings	
≫ Means	of transport / basic directions	
➤ Listen t	to, understand, and respond to everyday conversation	
≫ Respon	d to questions about ourselves and family members	
$\gg$ Use the	e singular and plural of regular nouns (-s).	
UNIT-IV Reading		10 Hours
≫ Food, d	lrink, groceries and meal	
≫ Everyd	ay life/ telling time	
≫ Making	g appointments	
$\gg$ Use de	finite and indefinite articles.	
UNIT-V	Writing	8 Hours
➤ Fill in a	a simple form (fiched'inscription/carte d'identité)	
➤ Describ	be pictures (Speak and Write)	
≫ Write a	short text on oneself	
Course outco At the end of	ome the course students will be able to	
CO 1	Recognize the basic sounds, letters, numbers, words and phrases of French.	
CO 2	Develop basic French vocabulary	
CO 3	Use simple phrases in real life conversations	
CO 4	Read simple sentences	
CO 5	Write simple sentences and fill in a form	

	B.TECH FIRST YEAR (Foreign Language)		
Course Code	AASL0203	ЛР	Credit
Course Title	German <sup>2</sup>	0 0	02
Course objective	2:		
1	An introduction to German language and cultur Students will learn to understand and articulate in d to day real-life situations.		
2	The course provides a foundation in the four basic skills LSRW (Listening, Speaking, Reading, and Writing) of language learning.		
Pre-requisites: The student s	should be able to communicate in basic English.		
	<b>Course Contents / Syllabus</b>		
UNIT-I	Introduction to German	4	5 Hours
<ul> <li>Introducing of</li> <li>Grammar: W</li> <li>personal prof</li> <li>simple senter</li> <li>verb conjuga</li> </ul>	nouns, nce,		
UNIT-II	Vocabulary building		6 Hours
<ul><li>hobbies,</li><li>numbers, me</li></ul>	ouilding – the alphabet, onths, seasons rticles, singular and plural forms		
UNIT-III	Everyday common simple sentences		5 Hours
means of transport,	and indefinite articles;	1	
UNIT-IV	Reading		7 Hours

Grammar: the accus	groceries and meals	
	g time, making appointments	
	ions am, um, von. bis; modal verbs, possessive articles vity, celebrations	
	e verbs, the accusative, past tense of to have and to be	
UNIT-V	Writing	7 Hours
	ic information and forms	
Grammar: dative A short text about o	pneself	
Grammar: changing		
Professions	2015.2	
Grammar: perfect t Clothes Health and		
Grammar: perfect te	ense and dative	
Grammar: the imper	rative and modal verbs	
Course outcome		
At the end of the co	urse students will be able to	
CO 1	Understand and be familiar with basic German and the culture	
CO 2	Recognise the foundational vocabulary	
CO 3	Use simple phrases in everyday conversations	
CO 4	Read simple sentences	
CO 5	Write simple sentences	
Text books
