M.TECH FIRST YEAR

Course Code	AMTCSE0102	L T P	Credit
Course Title	Artificial Intelligence	3 0 0	3

Course objectives:

This course aims to cover an overview of Artificial Intelligence (AI) principles and approaches and to develop the basic understanding of applying these techniques in applications involving perception, knowledge representation, and learning.

Course Contents / Syllabus

UNIT-I	Introduction	8 hours
Introduction	to Artificial Intelligence, Historical developments of Art	ificial Intelligence, Agents,
Intelligent A	gents, Structure of Intelligent Agents, Virtual Agents, M	ulti-agent systems, Natural
I anguage Po	ssessing (NLP) Text Analytics Applications of Artificial	Intelligence Chathot Brief

Language Possessing (NLP), Text Analytics, Applications of Artificial Intelligence, Chatbot, Brief introduction to python or other API tool used for Implementation like OPEN CV AND OPEN VINO, Introduction to Open Data

UNIT-II	Logic Representation	8 hours
---------	----------------------	---------

Introduction of Logic, Propositional Logic concepts, Semantic Tableaux and Resolution in Propositional logic, First Order Predicate Logic (FOPL), Semantic Tableaux and Resolution in FOPL, Logic Programming in Prolog. Production systems and rules for some AI problems: water jug problem, missionaries-cannibals problem, Queens problem, monkey banana problem, Travelling salesman problem, etc. Solving problems by searching: state space formulation, iterative deepening.

UNIT-IIISearch Techniques8 hoursSearching for solutions, Uniformed search strategies, Informed search strategies, Local search
algorithms and optimistic problems, adversarial Search, Search for games, minimax, Alpha - Beta
pruning, Heuristic Search techniques, Hill Climbing, Problem reduction , Constraint satisfaction
,Means Ends Analysis. Uninformed Search, DFS, BFS, Iterative deepening Heuristic Search, A*
etc

UNIT-IV Knowledge Representation & Expert System

Knowledge representation, semantic nets, partitioned nets, parallel implementation of semantic nets. Frames, Common sense reasoning and thematic role frames, Architecture of knowledgebased system, rule based systems, forward and backward chaining, Frame based systems. Architecture of Expert System, Resolution, Probabilistic reasoning, Utility theory, Hidden Markov Models (HMM).

8 hours

UNIT-V Planning and Learning 8 hours

Planning with state space search, conditional planning, continuous planning, Multi-Agent planning, Forms of learning, inductive learning, Reinforcement Learning, learning decision trees, Neural Net learning and Genetic learning. Probabilistic Methods, Bayesian Theory, Dempster Shafer Theory, Bayes Network,

Evolutionary Algorithms: swarm intelligence, ant colony optimization.

Course outcomes: After completion of this course students will be able to

CO 1	Understand the fundamental of the artificial intelligence	K2
	(AI) and its foundations.	
CO 2	Apply principles and techniques of AI in problem solving.	К3

CO 3	Analyze the various tools for application of AI.	K4				
		170				
CO 4	Apply the concepts of knowledge based system used in AI.	К3				
CO 5	Understand the various Evolutionary Algorithm in AI.	K2

Course Code	AMTCSE0151	LTP	Credit			
Course Title	Advanced Data Structures and Algorithms Lab	0 0 4	2			
	Suggested list of Experiment		1			
Sr. No.	Name of Experiment		CO			
1.	Implement Linear, Binary search, Bubble sort, Insertion sort, Se sort and Radix Sort.	lection	CO1			
2.	Implement Merge sort, Quick sort and Heap sort.		CO1			
3.	Implement Creation, Insertion, Traversal and Deletion operations in a Singly linked list.					
4.	Implement Creation, Insertion, Traversal and Deletion operation Doubly linked list.	s in a	CO2 CO4			
5.	Implement Creation, Insertion, Traversal and Deletion operation Circular linked list.	s in a	CO2 CO4			
6.	Stack and Queue Implementation using linked list.		CO2,C O4			
7.	Implement Tower of Hanoi using recursion.		CO4			
8.	Implementation of Binary Tree and Tree Traversal		CO3			
9.	D. Implementation of Binary Search Tree, Insertion and Deletion in BST.					
10.	Graph Implementation of BFS, DFS.		CO3			
11.	Graph Implementation of Minimum cost spanning trees.		CO3			
12.	Graph Implementation of shortest path algorithm.		CO3			
13.	Knapsack Problem using Greedy Solution		CO5			
14.	Perform Travelling Salesman Problem		CO5			
15.	Implement N Queen Problem using Backtracking		CO5			
Lab Course	Outcome: After completion of the lab students will b	e able to):			
CO 1	Implement various searching and sorting operations.		K3			
CO 2	Implement data structures using dynamic memory allocation tech	niques.	K2,K3			
CO 3	Explore and implement efficient data structure for a problem		K3			
CO 4	Implement complex problems using multiple user defined function	ons.	K3			
CO5	Implement optimization problems using various approaches		K3

Course	Title	Artificial Intelligence Lab	004	2
		Suggested list of Experiments		
Sr. No.	N	ame of Experiment		CO
1.	W	rite a python program to implement simple Chat-bot.		CO1
2.	In	plement Tic-Tac-Toe using A* algorithm.		CO1
3.		plement alpha-beta pruning graphically with proper example stify the pruning.	and	CO3
4.	W	rite a python program to implement Water Jug Problem.		CO3
5.	(B	se Heuristic Search Techniques to Implement Best first search sest-Solution but not always optimal) and A* algorithm (Always optimal) solution).		CO5
6.		se Heuristic Search Techniques to Implement Hill-Climbing gorithm.		CO5
7.	W	rite a program to implement Hangman game using python.		CO5
8.	W	rite a program to solve the Monkey Banana problem		CO5
9.	W	rite a python program to implement Simple Calculator progra	ım.	CO1
10.		rite a python program to POS (Parts of Speech) tagging for the ven sentence using NLTK	ne	CO2
11.	Sc	lve 8-puzzle problem using best first search		CO5
12.	Sc	lve Robot (traversal) problem using means End Analysis.		CO3, CO5
13.		nplementation of Image features Processing using OPENCV. PEN VINO	AND	CO4
14.	W	rite a program to implement Naïve Bayes Algorithm		CO3
Lab Co	ourse C	Outcomes: After completion of this course students will b	e able	to
CO 1	Design	n simple application of AI.		K6
CO 2	Impler	nent the Text Analysis algorithms.		K3
CO 3	Use th	e various algorithms of AI to solve real world problems.		K3
CO 4		the various OPEN SOURCE SOFTWARE tools fo nentation of Image Processing.	or the	К3

	M. TECH FIRST YEAR				
Course Code	AMTAI0111 I		Т	Р	Credits
Course Title	Soft Computing 3		0	0	3
Course objective	s:				
The course covers the develop the skills to	he basic principles, techniques, and applications of b design and implement Artificial Neural network, algorithm for the real world problems.				
,	Course Contents / Syllabus				
UNIT-I	Introduction				8 hours
	ft Computing, Soft computing vs. Hard computer or Areas of Soft Computing. Introduction to MATLA		-		• •
UNIT-II	Neural Network				8 hours
Various Activation Supervised Learning Applications of ANN	and its working, Model of Artificial Neuron, Archite Functions, Single Layer ANN System, Multi-Layer g, Unsupervised Learning, Reinforcement Learnin J in research, MATLAB Neural Network Toolbox.	Al	NN	Sys	tem, Recurrent networks. ron, Adaline, Madaline,
UNIT-III	Fuzzy Systems				8 hours
features of members	y Relation, Properties of Fuzzy Relation, Fuzzy ver hip functions, Max-Min Composition Fuzzy logic modeling				8 hours
based systems, Fuzz	y logic, Fuzzy Propositions, Fuzzy If-Then Rules, imp y Predicate logic, Fuzzy Inference Systems, Fuzzifica m, applications of Fuzzy logic, Fuzzy Logic MATLA	tio	n, l	Defuz	•
UNIT-V	Genetic Algorithm				8 hours
Fundamentals of Gen function, GA Operat	netic Algorithms, Basic concepts, Working Principle, cors- Reproduction, Crossover, Mutation, Convergence eling salesman problem using Genetic Algorithm, Ge ing.	ce o	of (GA, I	Bit wise operation in GA,
Course outcomes	5: After completion of this course students will be a	ble	e to		
CO 1	Discuss types, characteristics and applications of computing techniques.				
CO 2	Analyze and design artificial neural network we different types of learning techniques to see complex problem.			K4, ł	Κ 6
CO 3	Translate problems in fuzzy relation and apply membership function on it.			K2, F	ζ3
CO 4	Explain fuzzy logic and design fuzzy based sys to solve real world problems.			K2, I	ζ6
CO 5	Discuss the concept of genetic algorithm and various applications.	its	S	K2

M. TECH FIRST YEAR

	M, IECH FIRST YEAR		
Course Code	AMTCY0111	L T P	Credit
Course Title	Advanced Security of Networked Systems	3 0 0	3
Course object	ive : The objective of the course are	1	
1	Introduce Advanced topic of computer networks and Security	to the students	with the eve
	on future trends.		5
2	To understand necessary Approaches and Techniques to build	protection	
	mechanisms in order to secure computer networks.	1	
3	Apply design principles of authentication systems.		
4	Compare the key management problems for symmetric crypto	graphy-based a	nd
	asymmetric cryptography-based security protocols.		
5	Compare the unique security challenges in wireless networks;	apply various v	wireless
	network security standards.		
Pre-requisites	: Basics of networking and cryptography		
	Course Contents / Syllabus	T	
	INTRODUCTION TO NETWORK SECURITY		3
	Model, Types of Attack, Overview of Most Common Security		
•	verview, Password Attack, Dictionary Attack - Thwarting dicti	•	
	ptables to thwart dictionary attack, Password Cracking - Hashi	•	
-	troduction to Rainbow Table, Modern Linux Password Hashin	T

Course	Code	AMTCY0112	LTP	Credits
Course '	Title	Fundamentals of Data Science and Applications	300	3
Course	objectiv			
1	× ·	p practical data analysis skills, which can be applied to practic	al problem:	s.
2		p fundamental knowledge of concepts underlying data science	projects.	
3		p practical skills needed in modern analytics.		
4	and sof			
5	Develo process	p applied experience with data science software, programmines.	ng, applicat	tions and
Pre-req	uisites:	Basic knowledge of statistics, linear algebra.		
		Course Contents / Syllabus		
UNIT	-1 [N	NTRODUCTION TO DATA: Data Stores - Introduction to Soata, DBMS Concepts, RDBMS (Oracle/MySQL), NoSQL Mongo, Cassandra, Basic to complex Querying in SQL. (Lab Query tuning.,	Concepts,	8
UNIT-	-II [U	DATA ANALYSIS TECHNIQUES / STAGES: Introd Unstructured Data, Taming Unstructured Data. Understandin Understanding data formats (XML, JSON, YAML, PMML), I RSS, Atom, RDF), Preparing Data - Data Analysis/Profil Cleansing.	ng Data - Data feeds	8
UNIT-]	III S E U	DATA WAREHOUSING AND LEARNING ALGORITHM & OLAP - Fundamentals of Data Warehousing, Dimension M Blowly Changing Dimensions, ETL Process, Performance T varehouse Loads, Data Analytics Fundamentals, Pre Process Processors Bupervised Learning - Linear/Logistic Regression, Decision Tra Bayes Jnsupervised Learning, K-Means, Association Rules, H mplementation of the basic algorithms.	Aodelling. Funing of sors, Post	8
UNIT-	$-\mathbf{IV}$ $\begin{bmatrix} \mathbf{T} \\ \mathbf{a} \end{bmatrix}$	IADOOP THEORY: Introduction to Hadoop, Map-Reduce Theory and hands on implementation, MR coding, Basic Ma nd Monitoring of Hadoop Cluster, Implementation meansalgorithm using MR.	nagement	8
UNIT-	-V I	DATA ANALYTICS: Introduction to Streaming Data Antroduction to Spark, Introduction to Storm, Introduction to Study of Walmart Sales Forecasting Data Set, Boston Housing I	Scala.Case	8
Course of	<u>outcom</u>	e: After completion of this course students will be able to		
CO 1	Γ	Discuss basic notions and definitions in data analysis, machine	learning.	K2
				L

CO 2	Explain standard methods of data analysis and information retrieval	K1,K2
CO 3	Analyse the problem of knowledge extraction as combinations of data filtration, analysis and exploration methods.	K4
CO 4	Solve a real-world problem using mathematical equations.	K3
CO 5	Evaluate to develop complex analytical reasoning.	K5

	M. TECH FIRST YEAR	
Course Code	AMTAI0113 LTP	Credit
Course Title	Pattern Recognition3 00	3
Course objectiv	/es:	
development of p understand and a	ate students to understand the concept of a pattern and basic attern recognition and machine intelligence algorithms. It aims apply both supervised and unsupervised classification method as in real-world data.	to help students
1	Course Contents / Syllabus	
UNIT-I Intr	oduction	8 hours
Basics of pattern re	ecognition, Design principles of pattern recognition system, Learning	g and adaptation,
function, single n	a approaches, Basic Models of Artificial neurons, activation Functi euron computation, multilayer perceptron, least mean square alg nearly separable problems and bench mark problems in NN.	
UNIT-II Stat	istical Pattern Recognition	8 hours
Classifiers, Discri Functions for the N Bayes Decision T	esian Decision Theory-Continuous Features, Minimum-Error-Rat minant Functions, and Decision Surfaces, The Normal Densit Normal Density, Error Probabilities and Integrals, Error Bounds for N heory-Discrete Features, Missing and Noisy Features, Bayesian H	ty, Discriminant
· ·	an Decision Theory and Context.	1
UNIT-III Para	ameter estimation methods/ Linear Classifiers	8 hours
Maximum-Likeliho Principal Compone	quare Estimation Revisited: , Logistic Discrimination, Support V ood estimation, Bayesian Parameter estimation, Dimension reducent ent Analysis, Fisher Linear discriminant analysis, Expectation-max odels (HMM), Gaussian mixture models.	ction methods -
Hidden Markov M		timization (EM),
	-parametric Techniques and Non Linear Classifiers

M. TECH FIRST YEAR					
Course Code		AMTCY0114	L T P	Credit	
Course Title		Object Oriented Software Engineering	300	3	
Course ob					
1	To learn and understand various O-O concepts along with their applicability contexts.				
2	To learn various modeling techniques to model different perspectives of object-oriented software design (UML) and how to identify and model/represent domain constraints on the objects and (or) on their relationships				
3	To develop and design solutions for problems on various O-O concepts				
4	Document your requirements, analysis, and design models in the Unified Modeling Language (UML) notation. And apply techniques of state machines and design patterns to your designs.				
5	To discuss various software testing issues and solutions in software unit test, integration and system testing. And to expose the advanced software testing topics, such as object- oriented software testing methods.				
 Pre-requisites: Basic understanding of the software development life cycle (SDLC). Basic understanding of software programming using any programming language. 					
		Course Contents / Syllabus		0	
UNIT-I8Object Oriented Concepts and Modelling :What is Object Orientation(Introduction to class, Object, inheritance, polymorphism) Model: Importance of Modelling, Object Oriented Modelling, Object oriented system development: Function/data methods, Object oriented analysis, Object oriented construction, Object oriented testing, Identifying the elements of an object model: Identifying classes and objects, Specifying the attributes, Defining operations, Finalizing the object definition					
UNIT-II				8	
Introduction to UML :Overview of UML ,Conceptual Model of UML , Architecture , S/W Development Life Cycle, Basic and Advanced Structural Modelling: Classes Relationship, Common mechanism, Diagrams, Class diagram , Advanced classes, Advanced Relationship, Interface, Types and Roles, Packages, Object Diagram Basic, Behavioural Modelling: Interactions , Use cases, Use Case Diagram , Interaction Diagram, Activity Diagram ,State chart Diagram, Architectural Modeling: Component , Components Diagram ,Deployment DiagramUNIT-III8					
Object Oriented Design: Generic components of OO Design model ,System Design process: Partitioning the analysis model , Concurrency and subsystem allocation ,Task Mgmt component, Data Mgmt component , Resource Mgmt component , Inter sub-system communication, Object Design process					
UNIT-IV				8	
Object Oriented Analysis: Iterative Development, Unified process & UP Phases, Inception, Elaboration, Construction Transition, Understanding requirements, UP Disciplines, Agile UP, Dynamic Modelling, Functional modelling, Structure analysis vs. Object oriented analysis					

UNIT-V8Object Oriented Testing :Overview of Testing and object oriented Testing, Types of Testing , Object oriented
Testing strategies ,Test case design for OO software , Inter class test case design, Software Quality Assurance,
Quality factors, Object oriented metrics: Project metric, Process Metric, Product metrics

Course outcome: After completion of this course students will be able to

CO1	Demonstrate the ability to apply the knowledge of object oriented concepts for solving system modeling and design problems.	K3
CO2	Design and implement object oriented models using UML appropriate	K3,K6
	notations. And apply the concept of domain and application analysis for	
	designing UML Diagrams.	
CO3	Apply the concepts of object oriented methodologies to design cleaner	K3
	softwares from the problem statement.	
CO4	use an object-oriented method for analysis and to know techniques aimed	K3
	to achieve the objective and expected results of a systems development	
	process	
CO5	Demonstrate various issues for object oriented testing. And Distinguish	K3
	characteristics of structural testing methods.	_

	M. TECH FIRST YEAR		
Course Code	AMTCSE0202	LTP	Credit
Course Title		3 0 0	3
Course obje	rtives:		
The objective of tools, installation	f this course is to familiarize students with Robotic Proc on, Robot Development, Controls room and BOT deploy learn about various bots and its features.		
	Course Contents / Syllabus		
UNIT-I I	ntroduction	8	hours
Programming, Information Sh Types of Bots. Advanced: Sta SDLC, Roboti Document/Solu	s: History of Automation, Software Applications a Data & Data Structures, Algorithms, Software aring Mechanism, Variable and Arguments, Files and I andardization of processes, RPA Development metho c control flow architecture, RPA business case, RP tion Design Document, Industries best suited for RPA emerging ecosystem	Developmer File Types, A dologies, Di A Team, P	at Guidelines, Access Control Afference from rocess Design
UNIT-II I	Basics of Automation Anywhere		8 hours
Automation Ar	ation Anywhere, Automation Anywhere benefits, Set up hywhere products, What are Bots? Automation Anywhere Client Features		•
UNIT-III A	Automation Anywhere Client Variables and Commands		8 hours
Recorders, Typ Commands, Sy Advanced Fe	bes of variables, Commonly Used Commands, Intern stem Commands atures:-Integration Command, Security, Image Rec IL Automation, Object Cloning		
	AetaBots and IQ Bots		8 hours
MetaBot, Cont MetaBot, Impo IQ Bots:- Intro Validations Sch	taBots and its Usage, MetaBot Designer, Creation of M figuration in MetaBots screen, Calibrations in MetaB et and Export Dataset command oduction to IQ Bots, Install IQ Bots, Designer IQ Bots reduling IQ Bots	Bots screen,	Recording in esign IQ Bots,
UNIT-V I	Interprise Web Control Room		8 hours
accessibility , A Features:-Dasl	oom, Overview Benefits of Control Room, Control Roor udit Logs, Workflow Designer aboard, Activity, Bots Devices, Workload		
Course outco	L		
CO 1	Understand the basics of robot RPA concepts challenges with RPA.	and K2	
CO 2	Discuss different types of bots and Automation anyw features	here K2	

CO 3	Understand and apply customized variables and commands in task designing	K2,K3		
CO 4	Analyze and implement Meta Bots and IQ Bots.	K3,K4		
CO 5	Use Enterprise Web Control Room	К3

M. TECH FIRST YEAR AMTAI0211 LTP Credit **Course Code** 3 0 0 3 **Course Title Computer Vision Course objectives:** The course covers the basic understanding of key features of Computer Vision and apply the Computer Vision concepts to Biometrics, Medical diagnosis, document processing, mining of visual content, surveillance and advanced rendering. **Pre-requisites:** To extract the maximum from the course, the following prerequisites are must. Working knowledge of Linear Algebra, Probability Theory. Analysis, some notions of Signal Processing, and Numerical Optimization **Course Contents / Syllabus Introduction to Computer Vision** 8 hours UNIT-I Overview and State-of-the-art, The Four Rs of Computer Vision, Geometry of Image Formation, Digital Image Formation and low-level processing, Fundamentals of Image Formation, Transformation: Orthogonal, Euclidean, Affine, Projective etc, Fourier Transform, Convolution and Filtering, Image Enhancement, Restoration, Histogram Processing, Two View Geometry, Planar Scenes and Homography, Interest Point Detection. **Depth estimation and Multi-camera views** 8 hours **UNIT-II** Depth estimation and Multi-camera views: Robust Correspondence Estimation, Perspective, Edge Detection, Binocular Stereopsis: Camera and Epipolar Geometry; Image Filtering Rectification, DLT, RANSAC, Hough Transform, 3-D reconstruction framework; Auto calibration. Apparel, Feature Extraction, Edges - Canny, LOG, DOG.Spatiallydependenttransformations, templates and convolution, window operations, directional smoothing, othersmoothing techniques. Segmentation and Edge detection, region operations, Basic edgedetection, second order detection, crack edge detection, edge following, gradient operators, compass & Laplace operators. Line detectors (Hough Transform) Corners 8 hours UNIT-III Harris and Hessian Affine, Orientation Histogram, SIFT, SURF, HOG, GLOH, Scale-Space Analysis-Image Pyramids and Gaussian derivative filters, Gabor Filters and DWT. Morphological and other area operations, basic morphological operations, opening and closing operations, area operations, morphological transformations. Image compression: Types and requirements, statistical compression, spatial compression, contour coding, quantizing compression. Recognition 8 hours UNIT-IV Building blocks, Detectors and Descriptors, SIFT & Single Object Recognition, Optical Flow & Tracking, Introduction to Object Recognition and Bag-of-Words Models, Constellation model, Recognition: Objects, Scenes, Activities, Object classification and detection: a part-based discriminative model (Latent SVM), Objects in Scenes. Representation and Description, Object Recognition, 3-D vision and Geometry, Digital Watermarking. Texture Analysis.

UNIT-V	Application of Light at Surfaces	8 hours
PhongModel	, Reflectance Map, Albedo estimation, Photometric Stereo; Use	e of Surface Smoothness
Constraint; S	Shape from Texture, color, motion and edges, Face Detection	, Deep Learning, Image

Segmentation, Feature Tracking & Motion Layers. Case Study: Computer Vision based Mouse, Computer Vision based Text Scanner, Computer Vision based Smart Selfie, Surveillance Robot, Sixth Sense Robot

Cours	e outcomes: After completion of this course students will be able to	
CO 1	Understand the deep architectures used for solving various Vision and Pattern	K1
	Association tasks.	
CO 2	Analyze the appropriate learning rules for each of the architectures of perceptron and learn about different factors of back propagation.	K4
CO 3	Apply training algorithm for pattern association with the help of memory network.	K3
CO 4	Implement the models of deep learning with the help of use cases.	K3
CO 5	Understand different theories of deep learning using neural networks.	K2

	M. TECH FIRST YEAR		
Course Code	AMTCSE0211 L T P	Credit	
Course Title	Software Project & Management 3 0 0	3	
Course object			
1	To understand the fundamentals of Software Project Management		
2	To define & explore various scheduling terminologies and techniques		
3	To identify the necessity of testing and assurance activities as well as testing tools.		
4			
5	To learn about different software management tools		
Pre-requisites:			
	Course Contents / Syllabus	T	
UNIT-I	Introduction and Software Project Planning	8 hours	
Fundamentals of	Software Project Management (SPM), Need Identification, Vision and	Scope	
	ct Management Cycle, SPM Objectives, Management Spectrum, SPM	-	
	Planning, Planning Objectives, Project Plan, Types of Project Plan, Str		
-	Management Plan, Software Project Estimation, Estimation Methods,	Estimation	
Models, Decision		0.1	
UNIT-II	Project Organization and Scheduling Project Elements	8 hours	
	n Structure (WBS), Types of WBS, Functions, Activities and Tasks, Pr		
	Cycle, Ways to Organize Personnel, Project Schedule, Scheduling Obj		
-	lule, Scheduling Terminology and Techniques, Network Diagrams: PE	RT, CPM, Bar	
	e Charts, Gantt Charts	0.1	
UNIT-III	Project Monitoring and Control	8 hours	
	roject Monitoring & Control, Earned Value Analysis, Earned Value Ind		
	or Work Scheduled (BCWS), Cost Variance (CV), Schedule Variance (
	ex (CPI), Schedule Performance Index (SPI), Interpretation of Earned		
Reviews, Pair Pr	Software Reviews, Types of Review: Inspections, Deskchecks, Walkth	loughs, Code	
UNIT-IV		9 hours	
	Software Quality Assurance and Testing Objectives s, Test Plans, Test Cases, Types of Testing, Levels of Testing, Test Str	8 hours	
Correctness, Pro	gram Verification & Validation, Testing Automation & Testing Tools, y, Software Quality Attributes, Software Quality Metrics and Indicators	Concept of	
	ity Model CMM), SQA Activities, Formal SQA Approaches: Proof of	Correctness,	
Statistical Qualit	y Assurance, Cleanroom Process.	1	
UNIT-V	Project Management and Project Management Tools	8 hours	
	Software Configuration Management		
Software Config	uration Items and Tasks, Baselines, Plan for Change, Change Control,	Change Requests	
Management, Ve	ersion Control, Risk Management: Risks and Risk Types, Risk Breakdo	wn Structure	
(RBS), Risk Mar	nagement Process: Risk Identification, Risk Analysis, Risk Planning, R	isk Monitoring,	
	llysis, Project Closeout, Software Project Management Tools: CASE T	ools, MS-Project,	
Jira software, Tro	ello and other Planning and Scheduling Tools		
Course outcome	e: After completion of this course students will be able to		
CO 1	Describe the basic terminology of Software Project Management.	K ₁ , K ₂	
CO 2	Explore project lifecycle & scheduling techniques to implement project elements successfully.	K ₃ , K4	

CO 3	Review the dimensions of project monitoring and controlling through different types of reviews.	K2
CO4	Implement testing objectives, test plan and implement various types of testing, ensuring good software quality	К3
CO 4	Defend various tools to facilitate software project management process	K ₄ , K5

M. TECH FIRST YEAR

Course Code	AMTAI0213	L T P	Credit
Course Title	Reinforcement Learning	300	3

Course objectives:

The course aims to cover to build a Reinforcement Learning system for decision making problems and learn the space of RL algorithms like Temporal- Difference learning, Monte Carlo, Sarsa, Q-learning, Policy Gradients, Dyna.

UNIT-I Introduction to RL 8 hours Introduction to Reinforcement Learning (RL), Origin and history of RL research, RL and its connections with other ML branches. Linear algebra overview, Probability overview, Sequential Decision Making, Components of a reinforcement learning agent, Taxonomy of reinforcement learning agents. Introduction to Instance based learning. UNIT-II Markov Decision Processes and Bandit Algorithms 8 hours Policy Gradient Methods & Introduction to Full RL, Reinforcement Learning Problems: MDP Formulation, Bellman Equations & Optimality Proofs, Markov Processes, Markov Reward Processes, Markov Decision Processes, Bandit Algorithms (UCB, PAC, Median Elimination, Policy Gradient), Contextual Bandits. 8 hours UNIT-III Dynamic Programming: 8 hours Temporal Difference Methods, DQN, Fitted Q & Policy Gradient Approaches, Introduction to Dynamic Programming, Policy Evaluation (Prediction), Policy Improvement, Policy Iteration, Hierarchical RL: MAXQ, Asynchronous Dynamic Programming, Efficiency of Dynamic Programming, Temporal Difference Prediction, Why TD Prediction Methods, On-Policy and Off-Policy Learning, Networkous Dynamic Programming, Efficiency of Dynamic Programming, Temporal Difference Prediction, Why TD Prediction and Policy Gradient Methods, Value Function: 8 hours Bellman Equations, Bellman Optimality Equation, Optimality and approximation, Value Iteration. WINT-V Value Function: Bellman Equations, Bellman Optimality Equation, Optimization methods (GAE), Monte Carlo Control Without Exploring Starts, Incremental Implementation. Nours </th <th></th> <th>Course Contents / Syllabus</th> <th></th> <th></th>		Course Contents / Syllabus		
with other ML branches. Linear algebra overview, Probability overview, Sequential Decision Making, Components of a reinforcement learning agent, Taxonomy of reinforcement learning agents. Introduction to Instance based learning. UNIT-II Markov Decision Processes and Bandit Algorithms 8 hours Policy Gradient Methods & Introduction to Full RL, Reinforcement Learning Problems: MDP Promulation, Bellman Equations & Optimality Proofs, Markov Processes, Markov Reward Processes, Markov Decision Pormulation, Bellman Equations & Optimality Proofs, Markov Processes, Markov Reward Processes, Markov Decision Processes, Bandit Algorithms (UCB, PAC, Median Elimination, Policy Gradient), Contextual Bandits. UNIT-III Dynamic Programming: 8 hours Temporal Difference Methods, DQN, Fitted Q & Policy Gradient Approaches, Introduction to Dynamic Programming, Policy Evaluation (Prediction), Policy Improvement, Policy Iteration, Hierarchical RL: MAXQ, Asynchronous Dynamic Programming, Efficiency of Dynamic Programming, Temporal Difference Prediction, Wry TD Prediction Methods, On-Policy and Off-Policy Learning, Clearning, Reinforcement Learning in Continuous Spaces, SARSA. 8 hours UNIT-IV Value Functions, Bellman Optimality Equation, Optimality and approximation, Value Iteration. 8 hours Policy Gradient, Monte Carlo Policy Gradients, Generalized Advantage Estimation (GAE), Monte Carlo Porteciton, Monte Carlo Policy Gradients, Generalized Advantage Estimation (GAE), Monte Carlo Porteciton, Monte Carlo Policy Gradients, Generalized Advantage Estimation (GAE), Monte Carlo Porediction, Monte Carlo Policy Grad	UNIT-I			8 hours
Components of a reinforcement learning agent, Taxonomy of reinforcement learning agents. Introduction to Instance based learning. M TECH EIDOT VEAD

	M. TECH FIRST YEAR		
Course Code	AMTAI0214 L	ТР	Credit
Course Title	Introduction to Blockchain 3	00	3
Course objectiv	e:		I
The objective of technologycan be technologicalunder	this course is to provide conceptual understanding used to innovate and improve business processes. Dinning of block Chain operations in both theoretical and p ock Chain technology.	The co	urse covers the
Pre-requisites: (Programming	Cryptography Techniques, Data Structures and Algorithms	, Introd	uction to
	Course Contents / Syllabus		
	troduction to Blockchain		HOURS
chain, Transactions, currency to Block c Block chain Basic Crypto Primit	iew of Block chain, Public Ledgers, Bitcoin, Smart Contra , Distributed Consensus, Public vs Private Block chain, Un hain, Permissioned Model of Block chain, Overview of Se tives: Cryptographic Hash Function, Properties of a hash f gital Signature, Public Key Cryptography, A basic cryptog	derstan curity a unction	iding Crypto aspects of , Hash pointer
	sic crypto primitives		8 HOURS
	uzzle friendly Hash, Collison resistant hash, digital	sionatu	
	able random functions, Zero-knowledge systems.	Signata	nes, puone ke
			0 IIOUD
	stributed Consensus, Consensus in Bitcoin of Work (PoW), Proof of Stake (PoS), PoW vs PoS	and Da	8 HOURS
			•
	ssioned Blockchain (Basics, Consensus), Permission ne General Problem, Practical Byzantine Fault Tolerance)		
		. DIICOI	
Public, Private, H	ockchain Architectures ybrid, Blockchain for Enterprise – Overview, Block	chain (8 HOURS
Concepts, Ethereum			
	nart Contracts		8 HOURS
	s of Smart Contract Languages and verification challenge		-
to enforce legal con	tracts, comparing Bitcoin scripting vs. Ethereum Smart Co	ontracts	•
Course outcome		1.1.4.	
Course outcome	After completion of this course students will be aList fundamentals of block chain and expla		K1
001	cryptographic concepts underlying block cha		K1
	technology in layman terminology.		
CO 2	Describe how cryptography applies to block chain an	h	K2
002	impacts implementation-related decisions.	lu	IX2
CO 3	Apply block chain technology, how it relates to the		К3
	myriad of associated technologies and concep (communication, consensus, architecture, identit among others).	ts	
CO 4	Create a minimalist block chain application.		K6
CO 5	Illustrate Smart Contract Languages and comparison Smart Contracts with Bitcoin scripting.	of	K4

	M. TECH FIRST YEAR		
Course Cod	le AMTAI0215	LTP	Credit
Course Title		3 0 0	3
Course obje	ectives:		
	rovides an introduction to the field of Natural Language Pr	cocessing (NLP)	. The course
introduces bot	h linguistic (knowledge-based) and statistical approaches t	o NLP, illustra	te the use of
NLP technique	es and tools in a variety of application areas, as well as pro	vide insight int	o many open
research proble	ems.		
Pre-requisit	tes:None		
	Course Contents / Syllabus		
UNIT-I	Introduction to Natural Language Understanding		8 hours
The study of I	Language, Applications of NLP, Evaluating Language Unde	rstanding Syste	ms, Different
	guage Analysis, Representations and Understanding, Organ		iral language
Understanding	Systems, Linguistic Background: An outline of English synt	ax.	
UNIT-II	Word Level and Syntactic Analysis		8hours
Unigram Rig	gram language models, generating queries from docume	ents Language	models and
	nking with language models, KullbackLeiblerdivergence, D		
•		U	
	val and ranking. Management of Information Retrieval Syster		
	management, Digital asset management, Network ma		
	Records compliance and risk management, Version cont	rol, Data and	data quality,
Information sy	stem failure.		
UNIT-III	Semantic Analysis		8hours
Unsmoothed N	N-grams, Evaluating N-grams, Smoothing, Interpolation and	d Back off – W	Vord Classes,
Part-of-Speech	n Tagging, Rule-based, Stochastic and Transformation-bas	sed tagging, Iss	sues in POS
tagging –Maxi	mum Entropy models, popular tools and technologies.		
UNIT-IV	Grammars for Natural Language		8hours
Auxiliary Ver	bs and Verb Phrases, Movement Phenomenon in Langu	age, Handling	questions in
	Grammars. Human preferences in Parsing, Encoding uncertain		
UNIT-V	Ambiguity Resolution		8hours
	thods, Probabilistic Language Processing, Estimating Prob		
Probabilities, 1	Probabilistic Context-Free Grammars, Best First Parsing. S	emantics and L	ogical Form,
Word senses an	nd Ambiguity, Encoding Ambiguity in Logical Form.		
Course outc	comes :After completion of this course students will be al	ble to	
CO 1 Unde			
	erstand linguistic phenomena with formal grammars		K2
CO 2 Anal	erstand linguistic phenomena with formal grammars		K2 K4

CO^{2}	II. 1	W2
CO 3	Understand Morphology, syntax, semantics, and pragmatics of the language.	K2
CO 4	Comprehend the concepts of WorldNet, Semantic Roles and Word Sense	K2
	Disambiguation	
CO 5	Apply NLP techniques to design real world NLP applications	K3

	M. TECH FIRST YEAR		
Course Code	AMTCSE0215 L T	Г Р	Credit
Course Title	Modeling & Simulation 3 0	0 0	3
Course object			
1	To introduce the basic concepts of computation through mo are increasingly being used by architects, planners, and engine	•	nd simulation that
2	To identify different types of models and simulations and development process of a model.		tand the iterative
3	To develop simulation model using heuristic methods.		
4	To analyze simulation models using input and output analyzer	r	
Pre-requisites:			
	e of graphs and plots, Basic programming knowledge of ility and Statistics, Introductory Physics and Numerical method		AB, Introductory
Course Conte	N N		
	Introduction to modeling and simulation		8 Lectures
	modeling, Examples of models, types of models, mode mulation, MATLAB as a simulation tool, Bond graph modelin.	•	
UNIT-II	Modeling of dynamic and combined systems		8 Lectures
systems. Linearity and nor hydro mechanica	n-linearity in systems combined rotary and translatory system, l system.	, electrom	echanical system,
	Dynamic Response and System Transfer Function		8 Lectures
system transfer fu	e of 1st order system and 2nd order system, performance mean unction, transfer function of 1st and 2nd order system Block div riable formulation, frequency response and bode plots.		
UNIT-IV	System Simulation		8 Lectures
Why & when to methods, types o	simulate, nature and techniques of simulation, comparison of f system simulation, real time simulation, Simulation of cont n, Monte-Carlo computation vs. stochastic simulation.		ion and analytical
UNIT-V	Simulation and simulation applications		8 Lectures
planner mechanis	SIMULINK, examples of simulation problems- simple and sms, validation and verification of the simulation model, para tions, introduction to optimization.		
Course outcor	ne: After completion of this course students will be ab	ole to	
CO 1	Explain and apply basic concepts related to modeling and sim	ulation.	K2, K3
CO 2	Implement bond graphs for the type of systems and analyze t graph according to causality conflicts, and from a given bon without conflicts.		K3,K4

CO 3	Understand conservation laws, constitutive relationships and other physical relations to model mechanical, electrical and flow systems	K2
CO 4	Understand dynamic response and transfer function using various tools for system modeling and simulation.	K2
CO 5	Simulate mechanical and electrical systems using the computer tools Simulink.	К3

1	Basic	understanding of computer system and the design of arith tandardforFloatingPointNumbers	metic & logic u	nit,
2		of the concept of control unit, Micro operation and Instru	ction cycle & s	ub cycle.
3	Basic	understanding of the pipeline processor, Arithmetic Pipel	ine Design.	
4		understanding of advanced processor technology, hierarch memories and virtual memory.	hical memory sy	ystem,
5		stand the Vector Processing Principles, SIMD Architectu	re and Program	ming
Pre-req				
2. Logic g	ates and	ge of computer Organization. I their operations. oprocessor.		
		Course Contents / Syllabus		
UNIT-I		Introduction		8 hours
busarchite Processor	ecture,ty organiza	mputer Organization and Architecture, pesofbusesandbusarbitration.Register,busandmemorytran ation,generalregistersorganization,stackorganizationandac unitdesign,IEEEStandardforFloatingPointNumbers.		
UNIT-I	_	Control Unit		8 hours
microoper	ations,	ructiontypes,formats,instructioncyclesandsubcycles(fetch xecutionofacompleteinstruction,ProgramControl,Hardwin rizontalandverticalmicroprogramming, Flynn's classificat	reandmicroprog	· · ·
UNIT-I	[]	Pipelining		8 hours
instruction	n pipeliı	ocessor, nonlinear pipeline processor, Instruction pipeline ning, Dynamic instruction scheduling, Arithmetic Pipeline les, Static Arithmetic pipeline, Multifunctional arithmetic	e Design, Comp	
UNIT-I	V	Processors and Memory Hierarchy		8 hours
Processor Technolog	s, Super gy :Hier	sor technology, Instruction-set Architectures, CISC Scalar scalar Processors, VLIW Architectures, Vector and Symbolic archical memory technology, Inclusion, Coherence and L Memory Technology	polic processors	Memory
	τ	Vector Processing Principles		

Vector Processing Principles: Vector instruction types, Vector-access memory schemes. Synchronous Parallel Processing : SIMD Architecture and Programming Principles, SIMD Parallel Algorithms, SIMD Computers and Performance Enhancement

Case study on Intel skylake and IBM Power8, Nvidia Maxwell

Course out	come: After completion of this course students will be able to	
CO 1	Understand the basic structure and operation of a digital computer system, ALU,IEEEStandardforFloatingPointNumbers	K ₁ , K _{2,}
CO 2	Understand control unit techniques and the concept of instruction cycle and sub cycle.	K ₁ , K ₂
CO 3	Understand the concept of pipeline processor, Arithmetic Pipeline Design,	K_1, K_2
CO 4	Understand the advanced processor technology, Instruction set architectures, hierarchical memory system, cache memories and virtual memory.	K ₁ , K ₂
CO 5	Describe the concept of Vector Processing Principles, SIMD Architecture and Programming Principles	K ₁ , K ₂

Course C	ode	AMTCY0215 L T P	Credit
Course T		Software Protection 3 0 0	3
Course of			
		• he technical knowledge and skills needed to protect and defend software.	
		knowledge that can plan, implement, and monitor security mechanisms to hel	p ensure
		tion of information technology assets	L
		y, analyze, and remediate software security breaches.	
		he methods for preservation of digital evidence	
5 T	o develo	p an understanding of security policies	
Pre-requi	sites: B	asic understanding in security keyterms	
	Basic k	knowledge of web applications & programming concepts &os.	
	0.0	Course Contents / Syllabus	
UNIT-I	vulner types intrus malwa	are System Security: Introduction, Sample Attacks:, The Marketplace for rabilities, Error 404 Hacking digital India part 1 chase. of malware: Adware, Spyware, virus, worms, Trojan horse, rootkits, ion, bots, keyLogger, Ransomware, spam and pishing, case study on areMalwaresymptoms and their removal technique, Antivirus :definition purrently updated antivirus and their technical details.	8
UNIT-II	forma Defen	king & Defense: Control Hijacking , integer overflow ,buffer overflow, t string vulnerabilities, Language vulnerability with code use against Control Hijacking :- Platform Defense , Run-time Defenses, need Control Hijacking attacks	8
UNIT-III	Unix and p isolati	us operating system security issue: security : level of Confinement ,Detour Unix user IDs and process IDs rivileges ,System call interposition Access control methods, VM based ion ,Confinement principle ,Software fault isolation ows security : access control scheme, access token, security descriptors	8
UNIT-IV	.Brow site re Static transfe	nce software and network security landscape: HTTP content rendering reser isolation, sql injection attack with example, Cross-Site Scripting, Cross quest forgery, Code obfuscation - In-depth Semantics preserving obfuscating formations, complicating control flow, opaque predicates, data encoding, ing abstractions. Obfuscation – Theoretical Bounds Various impossibility s	8
UNIT-V	water	rmarking Definitions, Methods of Watermarking, Tamper proofing marks, Resilient watermarks, Stealth watermarks. Steganographic water	
	Softw gram	, Dynamic watermarking. vare Similarity Analysis:- Alternate methos for defeating obfuscations. K- based analysis, API-Based analysis, Tree-based Analysis, Graph- analysis, Metrics-BasedAnalysis.	

Course ou	Itcome: After completion of this course students will be able to				
CO 1	Understand software security issues that challenge security threats and their mitigation techniques.				
CO 2	Discuss threats, bugs posing security threats and predict their attenuation techniques.				
CO 3	Analyze the operating system based threats and list their fixing methods.				
CO 4	Discuss networks security landscape .				
CO 5	Apply watermarking for protection of images.	K3

M. TECH FIRST YEAR							
Course Co	de	AMTCY0216		L T P	Credit		
Course Tit		Information Security		300	3		
Course obj	ectiv	/e:			I		
1	Lear	n fundamentals knowledge re rity services, and countermeasure		Information	System, Security 1	hreats,	
2	Understand application security, data security, security technology, security threats from malicious software						
3	Learn the concept of physical security, criteria for selection of biometrics and design Issues in Biometric Systems.						
4	Understand the concepts of security threats to e-commerce applications such as electronic payment system, e-Cash, Credit/Debit Cards etc.						
5	Laws	erstand various types of Security s in India.	Policies, (Cyber Ethics,	IT Act, IPR and Cyl	ber	
Pre-requisi	ites:						
•	prog Lang	nputer networking concepts (gramming guages like C, Python, JavaScrip	t	-	-	oplicatic	
•	wei	b Application's architecture and Course Conte			cation		
UNIT-I	infor infor	oduction to Security: Introdu rmation Systems, Development rmation security, Need for Info ems, Information Assurance, Cyl	of Inform	nformation s nation System ecurity, Threa	as, Introduction to ats to Information	08	
UNIT-II	Security Attacks: Application security (Database, E-mail and Internet), Data Security Considerations-Backups, Archival Storage and Disposal of Data, Security Technology-Firewall and VPNs, Intrusion Detection, Access Control.08Security Threats -Viruses, Worms, Trojan Horse, Bombs, Trapdoors, Spoofs, E-mail viruses, Macro viruses, Malicious Software, Network and Denial of Services Attack, Security Threats to E-Commerce- Electronic Payment System, e- Cash, Credit/Debit Cards. Digital Signature, public Key Cryptography.08						
UNIT-III	Security Issues and Biometrics: Physical Security: Needs, Disaster and Controls, Basic Tenets of Physical Security and Physical Entry Controls, Access Control- Biometrics, Factors in Biometrics Systems, Benefits, Criteria for selection of biometrics, Design Issues in Biometric Systems, Interoperability Issues, Economic and Social Aspects, Legal Challenges.						
UNIT-IV	Risk Management: Developing Secure Information Systems, Application Development Security, Information Security Governance & Risk Management, Security Architecture & Design Security Issues in Hardware, Data Storage & Downloadable Devices, Physical Security of IT Assets, Access Control, CCTV and intrusion Detection Systems, Backup Security Measures						
UNIT-V	Secu polic the	urity Policies, Why Policies sho urity Policies: Security policies cies-Sample Security Policies, Policies. Information Security nt Law, IPR. Cyber Laws in Ir	cies, Polio ublishing a Standards	cy Review and Notificatio -ISO, IT Ac	Process-Corporate on Requirement of t, Copyright Act,	08	

	Property Law: Copy Right Law, Software License, Semiconductor Law and Patent Law				
Course ou	tcome: After completion of this course students will be able to				
CO 1	Understand information, information systems, information security, Cyber Security and Security Risk Analysis.	K ₂			
CO 2	Understand and apply application security, data security, security technology, security threats from malicious software	K2, K3			
CO3	Understand and apply physical security, criteria for selection of biometrics and design Issues in Biometric Systems	K ₂ , K ₃			
CO 4	Understand the concepts of security threats to e-commerce applications such as electronic payment system, e-Cash, Credit/Debit Cards etc.				
CO 5	Understand and apply Information Security Governance & Risk Management, Security of IT Assets and Intrusion Detection Systems.	K ₂ , K ₃
