| | MCA - FIRST YEAR FIRST SEMESTER | | | | | | | | |
|---------------------|---|---|---|---|--------|--|--|--|--|
| Course Code | AMCA0101 | L | T | P | Credit | | | | |
| Course Title | Fundamentals of Computer and Programming in C | 3 | 1 | 0 | 4 | | | | |

Course objective: To understand basic concepts of C-programming language. Implement C programs to solve complex problems. Enhance debugging, analyzing and problem-solving skills. Create diversified solutions for real world applications using C language Acquire the knowledge of variable allocation and binding, conditional statement, control flow, types, function, pointer, parameter passing, array, structure and file handling to solve real world problems.

Pre-requisites: Students are expected to be able to open command prompt window or terminal window, edit a text file, download and install software, and understand basic programming concepts.

Course Contents / Syllabus

UNIT-I Basic Programming concepts

8 hours

Approaches to Problem Solving: Concept of Algorithms and Flow Chart. Programming Languages Classification, Translator and their types.

Programming using C: Structure of C program, Overview of compilation and execution process in an IDE, transition from algorithm to program, Errors and their types, object and executable code, Tokens of C language: Keywords, identifiers, constant.

UNIT-II Data types and Conditional Statements

8 hours

Data type, Operators and their types, Arithmetic expressions and precedence: Operators, operator precedence and associativity, type conversion, mixed operands.

Conditional Branching: if, else-if, nested if - else, switch statements, use of break, and default with switch. Iteration and loops: Concept of loops, for, while and do-while, multiple loop variables, use of break and continue statements, nested loop.

Arrays: Array notation and representation (one and two dimensional), manipulating array elements, 2-D arrays used in matrix computation.

UNIT-III Functions and Pointers

8 hours

Functions: Concept of Sub-programming, function, types of functions, passing parameters to functions: call by value, recursive functions, Storage: scope of variable, local and global variables, Nesting of Scope, Storage classes: Auto, Register, Static and Extern

Pointers: defining and declaring pointer, pointer arithmetic and scaling, Pointer Aliasing, call by reference.

UNIT-IV Strings and Structure

8 hours

Strings: Introduction, initializing strings, accessing string elements, Array of strings, Passing strings to functions, String functions.

Structure, Introduction, Initializing, defining and declaring structure, Accessing members, Operations on individual members, Operations on structures, Structure within structure, Array of structure Union, Introduction, Initializing, defining and declaring structure, Accessing members, Operations on individual members, Operations on Union.

UNIT-V File handling and dynamic memory allocation

8 hours

Dynamic Memory Allocation: Introduction, Library functions –malloc, calloc, realloc and free. **Pre-processor directives**: defining and calling macros, File inclusion, conditional compilation

File Handling: Basics, File types, File operations, File pointer, File opening modes, File handling functions, File handling through command line argument, Record I/O in files.

Course outcome: At the end of course, the student will be able to

| CO 1 | Develop simple algorithms for arithmetic and logical problems. | K_2 |
|-----------|---|--|
| CO 2 | Implement and trace the execution of programs written in C language. | K ₁ ,K ₂ ,K ₄ |
| CO 3 | Implement conditional branching and iteration | K ₃ |
| CO 4 | Use function, and pointers to develop algorithms and programs. | K ₂ , K ₆ |
| CO 5 | Use searching and sorting algorithm to arrange data and use file handling for developing real life projects | K ₂ , K ₄ |

| MCA - FIRST YEAR FIRST SEMESTER | | | | | | | | |
|---------------------------------|------------------|---|---|---|--------|--|--|--|
| Course Code | AMCA0102 | L | T | P | Credit | | | |
| Course Title | Operating System | 3 | 0 | 0 | 3 | | | |

Course objective: To learn the fundamentals of Operating Systems, the Process management and CPU scheduling algorithm, understand the various issues in process synchronization and different strategies for handling the Deadlock, understand the concepts of memory management policies and virtual memory, learn the file system implementation and mass storage management functions of operating systems.

Pre-requisites: Students are expected to be familiar with Computer Organization

Course Contents / Syllabus

UNIT-I Fundamental Concepts of Operating System

8 hours

Introduction: Operating System Structure- Layered structure, System Components, Operating system functions, Classification of Operating systems- Batch, Interactive, Time sharing, Real Time System, Multiprocessor Systems, Operating System services, Reentrant Kernels, Monolithic and Microkernel Systems. issues in operating system design. Application of OS in different domain

UNIT-II Concurrent Processes

8 hours

Concurrent Processes: Process Concept, Principle of Concurrency, Producer / Consumer Problem, Mutual Exclusion, Critical Section Problem, Dekker's solution, Peterson's solution, Semaphores, Test and Set operation, Classical Problem in Concurrency- Dining Philosopher Problem, Sleeping Barber Problem, Producer Consumer problem, Readers/Writers problem. Inter Process Communication models and Schemes, Process generation.

UNIT-III CPU Scheduling and Deadlock

8 hours

CPU Scheduling: Scheduling Concepts, Performance Criteria, Process States, Process Transition Diagram, Schedulers, Process Control Block (PCB), Process address space, Process identification information, Threads and their management, Scheduling Algorithms, Multiprocessor Scheduling.

Real-Time Scheduling. Deadlock: System model, Deadlock characterization, Prevention, Avoidance and detection, Recovery from deadlock.

UNIT-IV Memory Management

8 hours

Memory Management: Basic bare machine, Resident monitor, Multiprogramming with fixed partitions, Multiprogramming with variable partitions, Memory Allocation: Allocation Strategies (First Fit, Best Fit, and Worst Fit), Fragmentation, Protection schemes, Paging, Segmentation, Paged segmentation, Virtual memory concepts, Demand paging, Performance of demand paging, Page replacement algorithms, Thrashing, Cache memory organization, Locality of reference.

UNIT-V Input/Output and File System

8 hours

I/O Management and Disk Scheduling: I/O devices, and I/O subsystems, I/O buffering, Disk storage and disk scheduling, RAID. File System: File concept, File organization and access mechanism, File directories, and File sharing, File system implementation issues, File system protection and security. Features of different OS[Windows, Linux, Android], Comparative Study of Different OS, Case Study

Course outcome: At the end of course, the student will be able to

| CO 1 | Explain main components, services, types and structure of Operating Systems. | K2 |
|------|---|----|
| CO 2 | Apply the algorithms and techniques to handle the various concurrency control issues. | К3 |
| CO 3 | Compare and apply CPU scheduling algorithms for process execution. | K2 |

| CO 4 | Identify occurrence of deadlock and describe ways to handle it. | К3 | | | | | | |
|--------------------|--|--|--|--|--|--|--|--|
| CO 5 | Explain and apply memory, I/O and disk management techniques. | K5 | | | | | | |

| MCA - FIRST YEAR FIRST SEMESTER | | | | | | | | | |
|---------------------------------|--|---|---|---|--------|--|--|--|--|
| Course Code | AMCA0103N | L | T | P | Credit | | | | |
| Course Title | Professional Communication and Management Principles | 2 | 0 | 0 | 2 | | | | |

Course objective: The objective of the course is to ensure that the students can understand the basic features of professional communication, communicate effectively in a professional environment, equipped to appear for the International Business English Certification, explain functions of management in terms of planning and organizing

Pre-requisites: The student should be able to communicate in basic English.

Course Contents / Syllabus

UNIT-I Introduction to Professional Communication

Communication – definition, process, levels, flow, types, and barriers, Technical Communication and its importance.

UNIT-II Reading and Listening Skills

5 hours

5 hours

Reading basics: Skimming, scanning, churning, assimilation, Reading texts for note making, paraphrasing, diagrams, charts, picture reading, Process and types of listening, Overcoming barriers to effective listening

UNIT-III Written Communication

10 hours

Vocabulary building - word formation; etymology; root words, prefixes & suffixes; synonyms; antonyms; homophones; abbreviations; one-word substitutes ,Requisites of a good sentence ,Common errors - subject-verb agreement and concord, tenses, articles, preposition; punctuation , Paragraph writing ,Basics of letter & email writing ,Resume & Job application letter

UNIT-IV Effective speaking Skills

10 hours

Components of effective speaking, Applied phonetics – phoneme, syllable, word accent, stress, rhythm & intonation, Public Speaking – Kinesics, Chronemics, Proxemics, Voice dynamics, Presentation Skills Facing an Interview, Do's & Don'ts of a GD

UNIT-V | Management & Management Practices

10 hour

Meaning, Definition and Scope of Management, The process of Management, Development of Management thought, Contribution of F.W. Taylor and Henry Fayol, Hawthorne Studies, Qualities of an Efficient Management, TQM, Importance of Planning, Steps in Planning, Organizational Structures, Meaning and Methods of Recruitment and Selection Process, Motivation—Meaning and Theories of Motivation, Leadership styles. Controlling Process.

Course outcome: At the end of course, the student will be able to

| CO 1 | Understand the fundamentals of communication | K1 |
|------|--|--------|
| CO 2 | Understand and apply reading and listening tasks for better professional competence. | K1, K4 |
| CO 3 | Write professionally in simple and correct English. | K2 |
| CO 4 | Apply speaking skills in various professional situations. | K4 |
| CO 5 | Understand and apply the concepts of planning and organizing. | K2,K4 |

| MCA - FIRST YEAR FIRST SEMESTER | | | | | | | |
|---------------------------------|----------------------|---|---|---|--------|--|--|
| Course Code | AMCA0105 | L | T | P | Credit | | |
| Course Title | Discrete Mathematics | 3 | 0 | 0 | 3 | | |
| ~ | | | | • | 4 141 | | |

Course objective: To develop mathematical ability in understanding mathematical reasoning, ability to perform combinatorial analysis and knowledge about discrete structures, Perform operations on discrete mathematics such as sets, functions and relations, Verify the correctness of an argument using symbolic logic and truth tables, Solve problems using counting techniques and combinatorics, to improve formal reasoning skills acquisition and mathematical knowledge

Pre-requisites: Students must be aware of basic set operations.

Course Contents / Syllabus

UNIT-I Set Theory, Relations & Functions

8 hours

Set Theory: Introduction, Size of sets and cardinals, Venn diagrams, Combination of sets, Multisets, Ordered pairs, Set identities and **Proofs of some general identities on sets**.

Relations & Functions: Definition, Operations on relations, Composite relations, Properties of relations, Equality of relations, Partial order relation and **Recursive definition of relation**.

Functions - Definition, Classification of functions, Operations on functions, Recursively defined functions and **Growth of Functions**.

Natural Numbers: Introduction, Piano's axioms, Mathematical Induction, Strong Induction and Induction with Nonzero Base cases.

UNIT-II Posets, Hasse Diagram, Lattices and Graph

8 hours

Posets, Hasse Diagram and Lattices: Introduction, Partial order sets, Combination of partial order sets, Hasse diagram, Introduction of lattices, Properties of lattices – Bounded, Complemented, Modular and Complete lattice.

Graphs: Definition and terminology, Representation of graphs, Multigraphs, Bipartite graphs, Planar graphs, Isomorphism and Homeomorphism of graphs, Euler and Hamiltonian paths, Graph coloring **Trees:** Definition, Binary tree, Binary tree traversal (BFS and DFS), Binary search tree.

UNIT-III | Algebraic Structures, Rings and Fields

8 hours

Algebraic Structures: Introduction to algebraic Structures and properties. Types of algebraic structures: Semi group, Monoid, Group, Abelian group and Properties of group. Subgroup, Cyclic group, Cosets, Permutation and **Symmetric groups**, Homomorphism and Isomorphism of groups.

Rings and Fields: Definition and elementary properties of Rings and Fields.

UNIT-IV | Propositional & Predicate Logic

8 hours

Propositional & Predicate Logic: Propositions well formed formula, Truth tables, Tautology, Contradiction, Algebra of propositions, Theory of Inference and Natural Deduction.

Predicate Logic: Theory of predicates, First order predicate, Predicate formulas, quantifiers, Inference theory of predicate logic.

UNIT-V Recurrence Relations & Combinatorics

8 hours

Recurrence Relations and Generating Function: Introduction and properties of Generating Function, Growth of functions, **Recurrences** from algorithms, Simple Recurrence relation with constant coefficients and Linear recurrence relation without constant coefficients. Methods of solving recurrences **Combinatorics:** Introduction, Counting Techniques, Pigeonhole Principle, Pólya's Counting Theory.

Course outcome: At the end of course, the student will be able to

| CO 1 | Use mathematical and logical notation to define and formally reason about basic | K1, K2 | | | | |
|------------|--|----------|--|--|--|--|
| | discrete structures such as Sets, Relations, Functions and Induction. | -, - | | | | |
| CO 2 | CO 2 Apply mathematical arguments using logical connectives and quantifiers to check the validity of an argument through truth tables and propositional and predicate logic. | | | | | |
| CO 3 | Identify and prove properties of Algebraic Structures like Groups, Rings and Fields | К3 | | | | |
| CO 4 | Apply the concept of combinatorics to solve basic problems in discrete mathematics | K2 | | | | |

| MCA - FIRST YEAR FIRST SEMESTER | | | | | | | | | |
|---------------------------------|---|--------|--------|------|----------|--|--|--|--|
| Course | Course Code AMCA0151 L T | | | | | | | | |
| Course | Title C Programming Lab | 0 | 0 | 4 | 2 | | | | |
| Course | objective: At the end of course, the students will be abl | e to d | lo th | e fo | llowing: | | | | |
| | | | | | | | | | |
| 1 | To introduce students to the basic knowledge of programming fundamentals of C | | | | | | | | |
| | language. | | | | | | | | |
| 2 | To impart writing skill of C programming to the students and | solvi | ng pi | obl | ems. | | | | |
| 3 | To impart the concepts like looping, array, functions, pointers | , file | , stru | ctur | e. | | | | |

Pre-requisites: Students are expected to be able to open command prompt window or Terminal window, edit a text file, download and install software, and understand basic programming concepts.

Course Contents / Syllabus

Introduction Programs

- 1. Program to explain the basic I/O Statement
- 2. Program to Explain the use and implementation of Data Types

Operators

- 1. Program to understand the use of Logical Operators
- 2. Program to implement Arithmetic and other Operators

Conditional Statement

- 1. Program to implement If..else statement
- 2. Program to implement nested if ... else statement

Switch Statement

1. Implementation and use of Switch Statement

Basic Loop operations

- 1. Program to implement loops (for, while, do., while)
- 2. Programs to print characters(screen printing)

Arrays

- 1. Program for manipulation of Single Dimension Array
- 2. Program for illustration use and application of Multi-dimensional Array like addition, multiplication of Matrix
- 3. Program to implement Searching and Sorting.

Exercise 7: Functions

1. Program to illustrate the use of Functions

- 2. Program to implement Call by Value
- 3. Program to implement Call by function

Structure & Union

- 1. Program to show use of structure
- 2. Programs to show use of Union

Dynamic Memory Allocation

1. Program to make use of DMA function

File operations using command line arguments

- 1. Program to write and read from file
- 2. Program to illustrate use of File Operations
- 3. Program to implement Command line Arguments

| Course out | Course outcome: At the end of course, the student will be able | | | | | | |
|-------------|--|--|--|--|--|--|--|
| CO 1 | Write the algorithm and draw a flow chart of a given problem. | | | | | | |
| CO 2 | Recognize and understand the syntax and construction of C programming code. | | | | | | |
| CO 3 | Implement Programs with pointers and arrays, perform pointer arithmetic, and use | | | | | | |
| | the pre-processor. | | | | | | |

Unit I

Introduction to Computer: Definition, Computer Hardware & Computer Software

Components: Hardware – Introduction, Input devices, Output devices, Central Processing Unit Memory – Primary and Secondary Software – Introduction, Types – System and Application.

Computer Languages: Introduction, Concept of Compiler, Interpreter & Assembler

Problem solving concept: Algorithms – Introduction, Definition, Characteristics, Limitations, Conditions in pseudo-code, Loops in pseudo code.

Unit II

Operating system: Definition, Functions, Types, Classification, Elements of command based and GUI based operating system. Windows Operating System Commands

Computer Network: Overview, Standalone, Types (LAN, WAN and MAN), Data communication, topologies.

Unit III

Internet: Overview, Architecture, Functioning, Basic services like WWW, FTP, Telnet, Gopher etc., Search engines, E-mail, Web Browsers.

Internet of Things (IoT): Definition, Sensors, their types and features, Smart Cities, Industrial Internet of Things.

Unit IV

MS-Office: Basic Concepts, Features, Applications and handling of MS-Word, MS-PowerPoint and MS-Excel

Unit V

Emerging Technologies: Introduction, overview, features, limitations and application areas of Cloud Computing, Big data, Grid Computing, Artificial Intelligence and Virtual Reality

Text Books:

- 1. Raja Raman V., "Fundamentals of Computers", Prentice-Hall ofIndia.

| MCA - FIRST YEAR SECOND SEMESTER | | | | | | | |
|----------------------------------|---------------------------------------|---|---|---|--------|--|--|
| Course Code | AMCA0201N | L | T | P | Credit | | |
| Course Title | Object Oriented Programming with JAVA | 3 | 1 | 0 | 4 | | |

Course objective: The basic and advance concepts of OOPs programming, Student will be able to implement Core Java programming, will be able to implement Packages, Exception Handling and String Handling and its implementation, able to understand Concurrency in Java and I/O Stream and its implementation, able to understand GUI Programming, Generics, Collections and JDBC and their use.

Pre-requisites: Students must know at least the basics of how to use a computer, and should be able to start a command line shell. Knowledge of basic programming concepts, as covered in 'Programming Basic' course is necessary

Course Contents / Syllabus

UNIT-I Introduction 8 hours

Object Oriented Programming: Introduction and Features: Abstraction, Encapsulation, Polymorphism, and Inheritance concepts, Need of OOP's paradigm.

Modeling Concepts: Introduction, Class Diagram and Object Diagram.

Control Statements: Decision Making, Looping and Branching, Argument Passing Mechanism: Command Line Argument.

UNIT-II Basics of Java Programming

8 hours

Class and Object: Object Reference, Constructor, Abstract Class, Interface and its uses, Defining Methods, Use of "this", "super", static and final keyword, Access control, modifiers, Nested class, Inner class, Anonymous inner class. Garbage Collection and finalize () Method.

Inheritance: Introduction and Types of Inheritance in Java, Constructors in Inheritance.

Polymorphism: Introduction and Types, Overloading and Overriding.

Lambda expression: Introduction and Working with Lambda Variables

Arrays: Introduction, single and multidimensional arrays

UNIT-III Packages, Exception Handling and String Handling

8 hours

Packages: Introduction and Types, Access Protection in Packages, Import and Execution of Packages.

Exception Handling, Assertions and Localizations: Introduction and Types, Exceptions vs. Errors, Handling of Exception. Finally, Throws and Throw keyword, Multiple Catch Block, Nested Try and Finally Block. Assertions and Localizations Concepts and it's working, Tokenizer.

String Handling: Introduction and Types, Operations, Immutable String, Method of String class, String Buffer and String Builder class, Reading/Writing from console and files, Simple I/O using System. Out and the Scanner class.

UNIT-IV Concurrency in Java and I/O Stream

8 hours

Threads: Introduction and Types, Creating Threads, Thread Life-Cycle, Thread Priorities, Daemon Thread, Runnable Class, Synchronizing Threads.

I/O Stream: Introduction and Types, Common I/O Stream Operations, Interaction with Console I/O and File I/O.

Annotations: Introduction, Custom Annotations and Applying Annotations with its types.

UNIT-V GUI Programming, Generics , Collections and JDBC

8 hours

GUI Programming: Introduction and Types of Swings, Abstract Window Toolkit, Components and Containers, Layout Managers and User-Defined Layout and Event Handling.

Generics and Collections: Introduction, Using Method References, Using Wrapper Class, Using Lists, Sets, Maps and Queues, Working with Generics.

| | e Connectivity using JDBC: Introduction, JDBC Drivers, Select, Insert, Delete are ts and Prepared Statement Interface | nd Update |
|-----------|--|-----------|
| Course o | utcome: At the end of course, the student will be able to | |
| CO 1 | Identify the concepts of object oriented programming and relationships among them needed inmodeling. | K2 |
| CO 2 | Demonstrate the Java programs using OOP principles with various types of classes and also implement the concepts of lambda expressions | К3 |
| CO 3 | Implement packages with different protection level resolving namespace collision and evaluate the error handling concepts for uninterrupted execution of Java program. | K3,K5 |
| CO 4 | Implement Concurrency control, I/O Streams and Annotations concepts and its types by using Java program. | K3 |
| CO 5 | Design and develop the GUI based application, Generics, Collections and JDBC applications in Java programming language to solve the real world problem. | K6 |

|----------------------------------|--|---|---|---|--------|--|--|
| Course Code | AMCA0203N | L | T | P | Credit | | |
| Course Title | Data Structures & Analysis of Algorithms | 3 | 1 | 0 | 4 | | |

Course objective: Analyze the asymptotic performance of algorithms, write rigorous correctness proofs for algorithms, demonstrate a familiarity with major algorithms and data structures, apply important algorithmic design paradigms and methods of analysis.

Pre-requisites: Basic knowledge of programming and mathematics

Course Contents / Syllabus

UNIT-I Introduction To Data Structure

8 hours

Introduction to data structure: Data, Entity, Information, Difference between Data and Information, Data type, Build in data type, Abstract data type, Definition of data structures, Types of Data Structures: Linear and Non-Linear Data Structure, Introduction to Algorithms: Definition of Algorithms, Difference between algorithm and programs, properties of algorithm, Algorithm Design Techniques, Performance Analysis of Algorithms, Complexity of various code structures, Order of Growth, Asymptotic Notations.

Arrays: Definition, Single and Multidimensional Arrays, Representation of Arrays: Row Major Order, and Column Major Order, Derivation of Index Formulae for 1-D,2-D Array Application of arrays, Sparse Matrices and their representations.

Linked lists: Array Implementation and Pointer Implementation of Singly Linked Lists, Doubly Linked List, Circularly Linked List, Operations on a Linked List. Insertion, Deletion, Traversal, Polynomial Representation and Addition Subtraction & Multiplications of Single variable.

UNIT-II Stacks & Queue

8 hours

Stacks: Abstract Data Type, Primitive Stack operations: Push & Pop, Array and Linked Implementation of Stack in C, Application of stack: Prefix and Postfix Expressions, Evaluation of postfix expression, Iteration and Recursion-Principles of recursion, Tail recursion, Removal of recursion Problem solving using iteration and recursion with examples such as binary search, Fibonacci numbers, and Hanoi towers.

Queues: Operations on Queue: Create, Add, Delete, Full and Empty, Circular queues, Array and linked implementation of queues in C, Dequeue and PriorityQueue.

Searching: Concept of Searching, Sequential search, Index Sequential Search, Binary Search. Concept of Hashing & Collision resolution Techniques used in Hashing.

UNIT-III Sorting & Graph

8 hours

Sorting: Insertion Sort, Selection Sort, Bubble Sort, Heap Sort, Comparison of Sorting Algorithms, Sorting in Linear Time: Counting Sort and Bucket Sort.

Graphs: Terminology used with Graph, Data Structure for Graph Representations: Adjacency Matrices, Adjacency List, Adjacency. Graph Traversal: Depth First Search and Breadth First Search, Connected Component.

UNIT-IV Tree 8 hours

Trees: Basic terminology used with Tree, Binary Trees, Binary Tree Representation: Array Representation and Pointer (Linked List) Representation, Binary Search Tree, Complete Binary Tree, An Extended Binary Trees, Tree Traversal algorithms: Inorder, Preorder and Post order, Constructing Binary Tree from given Tree Traversal, Operation of Insertion, Deletion, Searching & Modification of data in Binary Search Tree, Threaded Binary trees, Huffman coding using Binary Tree, AVL Tree and B Tree.

UNIT-V Dynamic Programming

8 hours

Divide and Conquer with Examples Such as Merge Sort, Quick Sort, Matrix Multiplication: Strassen's Algorithm

Dynamic Programming:Dijikstra Algorithm, Bellman Ford Algorithm, All- pair Shortest Path: Warshal Algorithm, Longest Common Sub-sequence, Greedy Programming: Prims and Kruskal algorithm

| Course o | outcome: At the end of course, the student will be able to | |
|-----------|---|-----------------|
| | | |
| CO 1 | Explain the concept of data structure, abstract data types, algorithms, analysis of | |
| | algorithms and basic data organization schemes such as arrays and linked lists. | K_2 |
| CO 2 | Describe the applications of stacks and queues and implement various operations on them using arrays and linked lists. | K ₃ |
| CO 3 | Describe the properties of graphs and trees and implement various operations such as searching and traversal on them. | K ₃ |
| CO 4 | Compare incremental and divide-and-conquer approaches of designing algorithms for problems such as sorting and searching. | K ₄ |
| CO 5 | Apply and analyze various design approaches such as Divide-and-Conquer, greedy and dynamic for problem solving. | K ₄ |

| 1. | Write a JAVA program to display default va | lue of all primitive data ty | pe of JAVA | Λ | | | | | |
| 2. | Write a JAVA program to implement class i | nechanism. – Create a clas | ss, methods | and invoke | | | | | |
| | them inside main method. | | | | | | | | |
| 3. | Write a JAVA program to implement constr | uator and constructor over | landing | | | | | | |
| J. | write a JAVA program to implement constr | uctor and constructor over | loading. | | | | | | |
| 4. | Write a JAVA program implement method of | overloading and method ov | erriding. | | | | | | |
| 5. | Write a JAVA program to implement Single | Inheritance and multi-lev | el inheritano | ce. | | | | | |
| 6. | Write a JAVA program to implement Interfa | ice. What kind of Inheritar | nce can be a | chieved? | | | | | |
| 7. | Write a JAVA program that describes excep | tion handling mechanism. | | | | | | | |
| 8. | Write a JAVA program Illustrating Multiple catch clauses. | | | | | | | | |
| 9. | Write a Java program for handling mouse & | key events. | | | | | | | |
| 10. | Program a program in Java (a) that prints pr | me numbers between 1 to | n. Number | n should be | | | | | |
| | accepted as command line input, (b) for gett | | | | | | | | |
| 11. | Write a JDBC program to select the all reco | rd in the table. | | | | | | | |
| 12. | Write a Java program to insert the multiple | acords in a table by using | Dranged St | rotement | | | | | |
| 12. | Write a Java program to insert the multiple i | | i repared St | aicincill. | | | | | |
| 13. | Write a Java | program using thread. | | | | | | | |
| 14. | Program for calling a method using class | instance, and create a cla | ass fruit wi | ith the following | | | | | |
| | attributes: | | | | | | | | |
| | Name of the fruit | | | | | | | | |
| | Single fruit or bunch fruit | | | | | | | | |
| | | | | | | | | | |

| | • Price | |
|----------|--|-----------------|
| | Define a suitable constructor and display Fruit () method that displays values of all | the attributes. |
| | Write a program that creates 2 objects of fruit class and display their attr | ibutes. |
| 15. | Program to sort the elements of an array in ascending order. | |
| Course (| outcomes: After completing this course student will be able to: | |
| CO 1 | To understand how to design, implement, test, debug, and document programs that use basic data types and computation, simple I/O, conditional and control structures, string handling and functions. | K1, K5 |
| CO 2 | To identify classes, objects, members of a class and the relationships among them needed for a finding the solution to specific problem | K2, K5 |
| CO 3 | To demonstrate how to achieve reusability using inheritance, interfaces and packages and describes faster application development can be achieved. | K3, K4 |
| CO4 | To demonstrate understanding and use of different exception handling mechanisms and concept of multithreading for robust faster and efficient application development. | K4 |
| CO5 | To Demonstrate the event handling process in GUI and JDBC based application in Java Programming language. | K5 |

| Course Code | AMCA0214P | LT P | Credit | | | | | |
| Course Title | Fundamentals of Digital Marketing and Analytics Lab | 0 0 2 | 1 | | | | | |
| Course obj | ectives: | | | | | | | |
| Review key trends within the Digital Marketing landscape. Explain the holistic impact of all Digital Marketing channels. Examine an example of each Digital Marketing channel. | | | | | | | | |

Pre-requisites: Students are expected to be able to open command prompt window or terminal window, edit a text file, download and install software, and understand basic programming concepts.

The programs in Digital Marketing and Analytics Lab will cover the following concepts:

- 1. Create a Chart with a spreadsheet
- 2. Create and edit a Google Sheet
- 3. Share the Google Sheet
- 4. Create Custom Data Table and Sort It.
- 5. Use COUNTIF, MIN, MAX, AVERAGE, SUM functions
- 6. Handling FORMULAS in Spreadsheet
- 7. Find Errors in functions
- 8. Clean data by Sorting and Filtering
- 9. Create your custom table with BigQuery
- 10. Query Your Dataset using BigQuery

Course outcomes: After completing this course student will be able to:

| CO 1 | Gain experience in developing a 'Digital marketing plan' | K6 |
|------|---|--------|
| CO 2 | Gain experience with time management around meeting project deadlines | K2, K6 |
| CO 3 | Develop their own presentation/speaking styles and learn effective methods of doing so through feedback on their own presentation as well as observation of other students' presentations | |

|----------------------------------|--|-------|---|--|--|--|--|
| Course Code | Course Code AMCA0215P | | | | | | |
| Course Title | Fundamentals of Digital Marketing and Optimization Lab | 0 0 2 | 1 | | | | |

Course objectives:

Fundamentals of Digital Marketing and Optimization. Develop a basic display campaign and allocate ad dollars for success. Examine the pricing models for display and evaluate the best possible choice for your campaign.

Pre-requisites: Students are expected to be able to open command prompt window or terminal window, edit a text file, download and install software, and understand basic programming concepts.

The programs in Digital Marketing and Optimization Lab will cover the following concepts:

- 1. Basic Explanation and Setups:
 - a. Name servers, theme & plugins setup
 - b. Basic SEO, How Search Engine Works?
 - c. Crawling, Indexing, Ranking
 - d. GSC, Google Analytics, GTM, Google Alerts
- 2. Content Frameworks:
 - a. Keyword (Explanation, Research, Ranking factor)
 - b. Keyword Classification, Finding Right Keyword
 - c. Competitive Keyword Research Content framework
- 3. On Page:
 - a. Element Explanation
 - b. Title Tag, Header Tags
 - c. Meta Description, The Body
 - d. URL Structure, Images
- 4. Technical SEO Part I
 - a. Elements Explanation
 - b. Site Architecture, Website Structure
 - c. Understand Google Crawlability
 - d. Robots.txt, Sitemaps, Mobile SEO, AMP
- 5. Technical SEO Part -II
 - a. WordPress Speed Optimization
 - b. CDN
 - c. Structured Data
 - d. Security

| | MCA - FIRST YEAR SECOND SEMESTER | | |
|--------------|----------------------------------|------|--------|
| Course Code | AMCA0216P | L TP | Credit |
| Course Title | CRM Administration Lab | 0 02 | 1 |

Course objectives:

To make the students understand the organizational need, benefits and process of creating long-term value for individual customers. To disseminate knowledge regarding the concept of e-CRM and e-CRM technologies. To enable the students, understand the technological and human issues relating to implementation of Customer Relationship Management in the organizations.

Pre-requisites: Creative thinking and which is being used by the creative talent in your business areas.

The programs in lab will cover the following concepts:

- 1. Quick Start: Lightning App Builder
- 2. Prepare Your Salesforce Org for Users
- 3. Customize an Org to Support a New Business Unit
- 4. Protect Your Data in Salesforce
- 5. Customize a Sales Path for Your Team
- 6. Setup the service Console
- 7. Build a discount approval process
- 8. Quick start process builder
- 9. Build a simple flow
- 10. Build a battle station App
- 11. Customize a Salesforce Object
- 12. Create Reports and Dashboards for Sales and Marketing Managers
- 13. Improve Data Quality for Your Sales and Support Teams
- 14. Create a Process for Managing Support Cases

Course outcomes: After completing this course student will be able to:

| CO 1 | Understand the basic concepts of Customer relationship management. | K6 |
|------|--|--------|
| CO 2 | To understand marketing aspects of Customer relationship management. | K2, K6 |
| CO 3 | Understand basics of operational Customer relationship management. | K6 |

| MCA - FIRST YEAR SECOND SEMESTER | | | | | |
|----------------------------------|----------------------|---|---|---|--------|
| Course Code | AMCA0218P | L | T | P | Credit |
| Course Title | Software Testing Lab | 0 | 0 | 2 | 1 |
| Course objectives: | | | | | |

Understand UML and how to create class diagram. Understanding how to create use case diagram, sequence diagram, collaboration diagram. Understand how to create Activity diagram, Component diagram, and deployment diagram

Pre-requisites: Basic knowledge about software and its types.

The programs in Software Testing lab will cover the following concepts:

- 1. Introduction to UML
- 2. Class Diagram for ATM.
- 3. Use Case Diagram for ATM
- 4. Sequence Diagram for ATM
- 5. Collaboration Diagram for ATM
- 6. State chart Diagram for ATM.
- 7. Activity Diagram for ATM.
- 8. Component Diagram for ATM
- 9. Deployment Diagram for ATM
- 10. Write a program in C language in demonstration the working of the following constructs i) do. While ii) while.do iii) if...else iv) switch v) for
- 11. A program for written in C language for Matrix Multiplication fails introspect the causes for its failure and write down the possible reasons for its failure
- 12. Take ATM system and study its system specifications and report various bugs.
- 13. Write the test cases for banking application.

Course outcomes: After completing this course student will be able to:

| CO 1 | Understand UML and how to create class diagram | K6 |
|------|--|--------|
| CO 2 | Understanding how to create use case diagram, sequence diagram, collaboration diagram. | K2, K6 |
| CO 3 | Understand how to create Activity diagram, Component diagram, and deployment diagram. | K6 |

Text books:

1. Lessons Learned in Software Testing, by Bret Pettichord, CemKaner, and James Marcus Bach1

- 2. Foundations of Software Testing: ISTQB Certification, by Dorothy Graham and Erik P.W.M. Veenendaa2
- 3. Software Testing: A Craftsman's Approach, Fourth Edition, by Paul C. Jorgensen

Reference book:

- 1. The Art of Software Testing, by Glenford Myers
- 2. Software Test Automation, by Dorothy Graham and Mark Fewster
- 3. Software Testing and Quality Assurance: Theory and Practice, by Kshirasagar Naik and Priyadarshi Tripathy

| | MCA - FIRST YEAR SECOND SEMESTER | | | | |
|--|---|-------------|------------------|---------------------------|---------------------------|
| Course Code | AMCANC0201 | L | P | T | Credit |
| Course Title | Cyber Security | 2 | 0 | 0 | 0 |
| | Course objective: | | | | |
| 1 | Achieve knowledge about Security of Information system an | nd R | Risk | fact | ors. |
| 2 | 2 Able to examine security threats and vulnerability in various scenarios. | | | | |
| 3 | Incorporate the design methodology for system security and | we | b se | curit | y. |
| 4 | Understand concept of cryptography and encryption technique to protect the data | | | ect the data | |
| | from cyber attack | | | | |
| 5 | Able to design policy and strategy which diminish crim | es | in | this | domain and |
| | provide protection for software and hardware. | | | | |
| Pre-requisites: | Basics recognition in the domain of Computer Science, Cor | nce | ot o | f net | work and |
| operating system | | | | | |
| | Course Contents / Syllabus | | | | |
| UNIT-I | INTRODUCTION | | | 8 | hours |
| Introduction to | Information Systems: Types of Information Systems, Devel | lopr | nen | t of | Information |
| Systems, Need | for Information Security, Threats to Information Systems, I | Info | rm | ation | Assurance, |
| Guidelines for | secure password and wi-fi security and social media and W | ind | low | s sec | urity Cyber |
| Security, and Se | ecurity Risk Analysis, Risk Management | | | | |
| UNIT-II | APPLICATION LAYER SECURITY | | | | 8 hours |
| Firewall and V Horse, Bombs, and Denial of | Considerations-Backups, Archival Storage and Disposal of Data PNs, Intrusion Detection, Access Control, Security Threats -V Trapdoors, Spoofs, E-mail Viruses, Macro Viruses, Malicio Services Attack, Security, Threats to E-Commerce: Electron th Credit/Debit Cards. | Viru ous | ises Sof | , Wo twar | rms, Trojan e, Network |
| UNIT-III | SECURE SYSTEM DEVELOPMENT | | 8 h | ours | |
| Storage & Dov Physical Security Security Measu | | lvin | ng i | n Sc | cial Media, |
| UNIT-IV | CRYPTOGRAPHY | | 8 h | ours | |
| | ptography, Digital signature, Public key distribution ,Real | | | - | |
| | Email security certificates, Transport Layer security, IP securit | | | | urity |
| UNIT-V | SECURITY POLICY | | | ours | |
| Policies-Sample | Task, WWW Policies, Email based Policies, Policy Revalua e Security Policies, Publishing and Notification Requirement | of t | he 1 | updat | ted and new |
| | ing Technology Security – Mobile, Cloud, and Security in supp | oly (| cha | ın ma | nagement |
| Course outcon | ne: At the end of course, the student will be able to | | | | |
| CO 1 | Analyze and evaluate the cyber security needs of an organization. | | K ₁ , | $\overline{\mathrm{K}_2}$ | |
| CO 2 | Determine and analyze software vulnerabilities and security | | K ₃ | | |
| | solutions. | | | | |
| | | - 1 | | | |

| CO 3 | Comprehend IT Assets security (hardware and Software) | K ₂ |
|-------------------|--|---------------------------------|
| | and performance indicators | |
| CO 4 | Measure the performance and encoding strategies of | K_3 |
| | security systems. | |
| CO 5 | Design operational a cyber security methods and policies to | K ₃ , K ₆ |
| | enhance current scenario security. | |
