# NOIDA INSTITUTE OF ENGINEERING AND TECHNOLOGY, GREATER NOIDA <br> (An Autonomous Institute) <br> Affiliated to Dr. A.P.J. Abdul Kalam Technical University, Uttar Pradesh, Lucknow <br> B.TECH <br> FIRST YEAR (SEMESTER-II) THEORY EXAMINATION (2020-2021) <br> (Objective Type) 

## Subject Code: ACSBS0201

Max. Mks. : 70

## subject: Statistical Methods

eneral Instructions:
All questions are compulsory.
Question No- 1 to 15 are objective type question carrying 2 marks each.
Question No- 16 to 35 are also objective type/Glossary based question carrying 2 marks each.

| Q.No | Question Content | Question Image | Category | Sub Category | Marks | Options <br> Randomization | Type | Difficulty | Correct | Option1 | Option2 | Option3 | Option4 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | The size of the population can be |  | Single Choice Questions | Single Choice Questions | 2 |  | Single Choice | Brilliant | Finite and Infinite both | finite | Infinite | Sampled population | Finite and Infinite both |
| 2 | In sampling without replacement , an element can be chosen |  | Single Choice Questions | Single Choice Questions | 2 |  | Single <br> Choice | Smart | Only once | Less than once | More than once | Only once | Difficult to tell |
| 3 | In simple linear regression, the number of unknown constants are |  | Single Choice Questions | Single Choice Questions | 2 |  | Single Choice | Smart | Two | One | Two | Three | Four |
| 4 | The correlation coefficient is used to determine |  | Single Choice Questions | Single Choice Questions | 2 |  | Single <br> Choice | Brilliant | The strength of the relationship between the x and y variables | A specific value of the $y$. variable given a specific value of the x - variable | A specific value of the $x$ variable given a specific value of the $y$-variable | The strength of the relationship between the $x$ and $y$ variables | None of these |
| 5 | Rank the score of 5 in the following set of scores\ 9,3,5,10,8,5,9,7,3,4 |  | Single Choice Questions | Single Choice Questions | 2 |  | Single Choice | Brilliant | 4.5 | 4.5 | 3 | 4 | 6 |
| 6 | Estimation is of two types |  | Single Choice Questions | $\begin{gathered} \hline \text { Single Choice } \\ \text { Questions } \\ \hline \end{gathered}$ | 2 |  | Single Choice | Smart | Point estimation and interval estimation | $\begin{aligned} & \text { One sided and two } \\ & \text { sided } \\ & \hline \end{aligned}$ | Type I and type II | Point estimation and interval estimation | Biased and unbiased |
| 7 | A formula or rule used for estimating the parameter is called |  | Single Choice Questions | $\begin{array}{\|c\|} \hline \text { Single Choice } \\ \text { Questions } \\ \hline \end{array}$ | 2 |  | Single Choice | Smart | Estimator | Estimation | Estimate | Estimator | Interval estimate |
| 8 | Interval estimate is associated with |  | Single Choice Questions | Single Choice Questions | 2 |  | Single Choice | Brilliant | Range of values | Probability | Non-probability | Range of values | Number of parameters |
| 9 | The null hypothesis is |  | Single Choice Questions | Single Choice Questions | 2 |  | Single Choice | Smart | H 0: \μ = 12 | H 0: \μ \< 12 | H 0: \μ = 12 | H 0: \μ \> 12 | H 0: \μ \≠ 12 |
| 10 | A statement made about a population for testing purpose is called |  | Single Choice Questions | Single Choice Questions | 2 |  | Single Choice | Brilliant | Hypothesis | Statistic | Level of Significance | Test-Statistic | Hypothesis |
| 11 | If the null hypothesis is false then which of the following is accepted |  | Single Choice Questions | Single Choice Questions | 2 |  | Single Choice | Smart | Alternative Hypothesis | Null Hypothesis | Positive Hypothesis | Negative Hypothesis | Alternative Hypothesis |
| 12 | A time series is a set of data recorded |  | Single Choice Questions | $\begin{array}{\|c\|} \hline \text { Single Choice } \\ \text { Questions } \\ \hline \end{array}$ | 2 |  | Single Choice | Brilliant | All of the above | Periodically | Weekly | successive points of time | All of the above |
| 13 | The seasonal variation means the variations occurring with in |  | Single Choice Questions | $\begin{gathered} \hline \text { Single Choice } \\ \text { Questions } \end{gathered}$ | 2 |  | Single Choice | Brilliant | within a year | A number of years | within a year | within a month | within a week |
| 14 | The first step in time-series analysis is to |  | Single Choice Questions | $\begin{array}{\|c\|} \hline \text { Single Choice } \\ \text { Questions } \\ \hline \end{array}$ | 2 |  | Single Choice | Smart | Plot the data on a graph | Perform preliminary regression calculations | Calculate a moving average | Plot the data on a graph | Identify relevant correlated variables |
| 15 | Any calculation on the sampling data is called |  | Single Choice Questions | Single Choice Questions | 2 |  | Single <br> Choice | Brilliant | Static | Parameter | Error | Static | Random sampling |
| 16 | Standard error of mean is calculated by - |  | Glossary I | Glossary I | 2 |  | Single <br> Choice | Brilliant | SD/square root of n | Population | SD/square root of n | size of the population | simple random sampling |
| 17 | The set of all individuals who belong to the group being studied by a survey is called |  | Glossary I | Glossary I | 2 |  | Single Choice | Brilliant | Population | Population | SD/square root of n | size of the population | simple random sampling |
| 18 | We can calculate the accuracy of the results by using |  | Glossary I | Glossary I | 2 |  | Single Choice | Brilliant | simple random sampling | Population | SD/square root of n | size of the population | simple random sampling |
| 19 | The total number of objects (individuals or members) in a population is known as |  | Glossary I | Glossary I | 2 |  | Single <br> Choice | Brilliant | size of the population | Population | SD/square root of n | size of the population | simple random sampling |

| Q.No | Question Content | Question Image | Category | Sub Category | Marks | Options Randomization | Type | Difficulty | Correct | Option1 | Option2 | Option3 | Option4 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 20 | If\ \ and $\mathrm{n}=10$, the rank of the given value is |  | Glossary II | Glossary II | 2 |  | Single <br> Choice | Smart | 0.721 | Origin and but not of scale | 0.393 | Geometric mean | 0.721 |
| 21 | Correlation coefficient is the\  between the regression coefficients. |  | Glossary II | Glossary II | 2 |  | Single Choice | Smart | Geometric mean | Origin and but not of scale | 0.393 | Geometric mean | 0.721 |
| 22 | Regression coefficients are independent of the $\qquad$ \  |  | Glossary II | Glossary II | 2 |  | Single <br> Choice | Smart | Origin and but not of scale | Origin and but not of scale | 0.393 | Geometric mean | 0.721 |
| 23 | If the difference between the ranks of two variables are $(-1,-4,2,1,-2,2,2)$, the spearman rank correlation coefficient is |  | Glossary II | Glossary II | 2 |  | Single Choice | Smart | 0.393 | Origin and but not of scale | 0.393 | Geometric mean | 0.721 |
| 24 | Estimation is possible only in case of a__ |  | Glossary III | Glossary III | 2 |  | Single Choice | Smart | Random sample | Biased | Random sample | Point estimate | Error of estimation |
| 25 | A single value used to estimate a population values is called___\  |  | Glossary III | Glossary III | 2 |  | Single Choice | Smart | Point estimate | Biased | Random sample | Point estimate | Error of estimation |
| 26 | If the mean of the estimator is not equal to the population parameter, the estimator is said to be $\qquad$ |  | Glossary III | Glossary III | 2 |  | Single <br> Choice | Smart | Biased | Biased | Random sample | Point estimate | Error of estimation |
| 27 | The distance between an estimate and the estimated parameter is called |  | Glossary III | Glossary III | 2 |  | Single Choice | Smart | Error of estimation | Biased | Random sample | Point estimate | Error of estimation |
| 28 | Type 1 error occurs when _ |  | Glossary IV | Glossary IV | 2 |  | Single <br> Choice | Brilliant | We reject null hypothesis\  if it is True | Do not reject a false null hypothesis | We reject null hypothesis\  if it is True | Mann-Whitney U-test | Simple hypothesis |
| 29 | Type 2 error occurs when _- |  | Glossary IV | Glossary IV | 2 |  | Single Choice | Smart | Do not reject a false null hypothesis | Do not reject a false null hypothesis | $\square$ hypothesis\  if it is True | Mann-Whitney U-test | Simple hypothesis |
| 30 | Neyman Pearson Lemma is used to test _- |  | Glossary IV | Glossary IV | 2 |  | Single Choice | Smart | Simple hypothesis | Do not reject a false null hypothesis | $\begin{array}{\|c\|} \hline \text { We reject null } \\ \text { hypothesis\&nbsp;if it is } \\ \text { True } \end{array}$ | Mann-Whitney U-test | Simple hypothesis |
| 31 | The non parametric test is equivalent of an unpaired sample $t$-test |  | Glossary IV | Glossary IV | 2 |  | Single <br> Choice | Smart | Mann-Whitney U-test | Do not reject a false null hypothesis | We reject null hypothesis\ if it is True | Mann-Whitney U-test | Simple hypothesis |
| 32 | The sales of a commodity may decrease over a period of time because of better products coming to the market. This is an example of _ |  | Glossary V | Glossary V | 2 |  | Single Choice | Brilliant | declining trend | P | q | declining trend | ARIMA |
| 33 | Autoregressive Integrated Moving-average stands for |  | Glossary V | Glossary V | 2 |  | Single Choice | Brilliant | ARIMA | P | q | declining trend | ARIMA |
| 34 | $\qquad$ is the order of Autoregressive AR process |  | Glossary V | Glossary V | 2 |  | Single Choice | Brilliant | P | P | q | declining trend | ARIMA |
| 35 | $\qquad$ is the order of Moving average MA process |  | Glossary V | Glossary V | 2 |  | Single Choice | Brilliant | q | P | q | declining trend | ARIMA |
