# NOIDA INSTITUTE OF ENGINEERING AND TECHNOLOGY, GREATER NOIDA 

## (An Autonomous Institute)

Affiliated to Dr. A.P.J. Abdul Kalam Technical University, Uttar Pradesh, Lucknow

## B.TECH

FIRST YEAR (SEMESTER-II) THEORY EXAMINATION (2020-2021)
(Objective Type)
Subject Code: ACSBS0203
Subject: Data Structures \& Algorithms
General Instructions:
All questions are compulsory
Question No- 1 to 15 are objective type question carrying 2 marks each.
Question No- 16 to 35 are also objective type/Glossary based question carrying 2 marks each.

| Q.No | Question Content | $\begin{array}{\|c\|} \hline \text { Question } \\ \text { Image } \\ \hline \end{array}$ | Category | Sub Category | Marks | Type | Difficulty | Correct | Option1 | Option2 | Option3 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | In simple terms, we can say that an algorithm is a step-by-step procedure for performing some task in a finite amount of time.\  |  | Single Choice Questions | Single Choice Questions | 2 | Single <br> Choice | Brilliant | TRUE | FALSE | TRUE | Maybe |
| 2 | Which case of data structure operation takes maximum time? |  | Single Choice Questions | Single Choice Questions | 2 | Single Choice | Smart | Worst Case | Worst Case | Average Case | Best Case |
| 3 | Which of these best describes an array? |  | Single Choice Questions | Single Choice Questions | 2 | Single <br> Choice | Smart | Container of objects of similar types | A data structure that shows a hierarchical behavior | Container of objects of similar types | Container of objects of mixed types |
| 4 | The postfix form of $\mathrm{A} * \mathrm{~B}+\mathrm{C} / \mathrm{D}$ is ? |  | Single Choice Questions | Single Choice Questions | 2 | Single Choice | Brilliant | AB*CD/+ | *AB/CD+ | AB*CD/+ | A*BC+/D |
| 5 | If the elements "A", "B", "C" and "D" are placed in a queue and are deleted one at a time, in what order will they be removed? |  | Single Choice Questions | Single Choice Questions | 2 | Single <br> Choice | Brilliant | ABCD | ABCD | DCBA | DCAB |
| 6 | In what tree, for every node the height of its left subtree and right subtree differ at least by one? |  | Single Choice Questions | Single Choice Questions | 2 | Single Choice | Brilliant | AVL tree | Binary search tree | AVL tree | Threaded binary tree |
| 7 | In which traversal root node in visited at the last ?\  |  | Single Choice Questions | Single Choice Questions | 2 | Single Choice | Smart | Post-order traversal | Post-order traversal | Pre-order traversal | In-order traversal |
| 8 | What graph traversal algorithm uses a queue to keep track of vertices which need to be processed? |  | Single Choice Questions | Single Choice Questions | 2 | Single <br> Choice | Smart | BFS | BFS | DFS |  |
| 9 | Which of the following best describes sorting? |  | Single Choice Questions | Single Choice Questions | 2 | Single Choice | Smart | Arranging the data(record) in some given order | Accessing and processing each record with a given key | Finding the ocation of the record with a given key | Arranging the data(record) in some given order |
| 10 | The algorithm design technology used in the quick sort algorithm is: |  | Single Choice Questions | Single Choice Questions | 2 | Single Choice | Smart | Divide and Conquer | Dynamic programming | Back tracking | Divide and Conquer |
| 11 | The goal of hashing is to produce a search that takes: |  | Single Choice Questions | Single Choice Questions | 2 | Single <br> Choice | Smart | $\mathrm{O}(1)$ time | $\mathrm{O}(1)$ time | $\mathrm{O}(\mathrm{n})$ time | $\mathrm{O}(\log \mathrm{n})$ time |
| 12 | What is the number of edges present in a complete graph having n vertices? |  | Single Choice Questions | Single Choice Questions | 2 | Single Choice | Brilliant | $(\mathrm{n} *(\mathrm{n}-1)) / 2$ | $(\mathrm{n} *(\mathrm{n}+1)$ )/2 | $(\mathrm{n} *(\mathrm{n}-1)) / 2$ | n |
| 13 | A graph with all vertices having equal degree is known as a $\qquad$ |  | Single Choice Questions | Single Choice Questions | 2 | Single <br> Choice | Smart | Regular Graph | Multi Graph | Regular Graph | Simple Graph |
| 14 | Which of the following ways can be used to represent a graph? |  | Single Choice Questions | Single Choice Questions | 2 | Single <br> Choice | Brilliant | Adjacency Matrix as well as Incidence | Adjacency List and Adjacency Matrix | Incidence Matrix | Adjacency Matrix as well as Incidence |
| 15 | To verify whether a function grows faster or slower than the other function, we have some asymptotic or mathematical notations, which is $\qquad$ . |  | Single Choice Questions | Single Choice Questions | 2 | Single Choice | Smart | All of the above | Big Omega \Ω <br> (f) | Big Theta \θ (f) | Big Oh O (f) |

| Q.No | Question Content | Question <br> Image | Category | Sub Category | Marks | Type | Difficulty | Correct | Option1 | Option2 | Option3 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 16 | The two main resources that we consider for an algorithm are $\qquad$ |  | Glossary I | Glossary I | 2 | Single Choice | Smart | Memory space and processor time | Zero or more | Memory space and processor time | Non linear |
| 17 | defined in recursion. |  | Glossary I | Glossary I | 2 | Single Choice | Smart | Stack overflow | Non linear | Zero or more | Memory space and processor time |
| 18 | An algorithm may have $\qquad$ \‘inputs\’ quantities. |  | Glossary I | Glossary I | 2 | Single Choice | Smart | Zero or more | Non linear | Zero or more | Memory space and processor time |
| 19 | In $\qquad$ data structure, data contain hierarchical and network relationship between elements. |  | Glossary I | Glossary I | 2 | Single <br> Choice | Brilliant | Non linear | Non linear | Zero or more | Memory space and processor time |
| 20 | $\qquad$ matrix has most of the elements (not all) as Zero. |  | Glossary II | Glossary II | 2 | Single Choice | Brilliant | Sparse | Tower of Hanoi | Sparse | Doubly linked list |
| 21 | In $\qquad$ , two pointers are maintained to store next and previous nodes. |  | Glossary II | Glossary II | 2 | Single <br> Choice | Smart | Doubly linked list | Tower of Hanoi | Sparse | Doubly linked list |
| 22 | $\qquad$ form of access is used to add and remove nodes from a queue. |  | Glossary II | Glossary II | 2 | Single Choice | Brilliant | FIFO, First In First Out | Tower of Hanoi | Sparse | Doubly linked list |
| 23 | ___ is an application of stack. |  | Glossary II | Glossary II | 2 | Single Choice | Brilliant | Tower of Hanoi | Tower of Hanoi | Sparse | Doubly linked list |
| 24 | The number of edges from the root to the node is called $\qquad$ of the tree. |  | Glossary III | Glossary III | 2 | Single Choice | Brilliant | Depth | B-tree of order n | $\mathrm{n}+1$ | Depth |
| 25 | In a binary search tree, $\qquad$ traversals would print the numbers in the ascending order. |  | Glossary III | Glossary III | 2 | Single Choice | Smart | In-order traversal | B-tree of order n | $\mathrm{n}+1$ | Depth |
| 26 | $\qquad$ is a order-n multiway tree in which each non-root node contains at least ( n \– 1 )/2 keys. |  | Glossary III | Glossary III | 2 | Single <br> Choice | Brilliant | B-tree of order n | B-tree of order n | $\mathrm{n}+1$ | Depth |
| 27 | The no of external nodes in a full binary tree with $n$ internal nodes is $\qquad$ |  | Glossary III | Glossary III | 2 | Single Choice | Smart | $\mathrm{n}+1$ | B-tree of order n | $\mathrm{n}+1$ | Depth |
| 28 | _____ is the time complexity of quicksort. |  | Glossary IV | Glossary IV | 2 | Single <br> Choice | Brilliant | $\mathrm{O}(\mathrm{n} * \mathrm{n})$ | External sorting | $\mathrm{O}(\mathrm{n} * \mathrm{n})$ | Worst-case |
| 29 | If the given input array is sorted or nearly sorted, $\qquad$ algorithm gives the best performance. |  | Glossary IV | Glossary IV | 2 | Single <br> Choice | Smart | Insertion sort | External sorting | $\mathrm{O}(\mathrm{n} * \mathrm{n})$ | Worst-case |
| 30 | ___ algorithm that uses tape or disk during the |  | Glossary IV | Glossary IV | 2 | Single Choice | Smart | External sorting | External sorting | $\mathrm{O}(\mathrm{n} * \mathrm{n})$ | Worst-case |
| 31 | The $\qquad$ occur in linear search algorithm when Item is the last element in the array. |  | Glossary IV | Glossary IV | 2 | Single Choice | Brilliant | Worst-case | External sorting | $\mathrm{O}(\mathrm{n} * \mathrm{n})$ | Worst-case |
| 32 | The $\qquad$ process updates the costs of all the vertices V, connected to a vertex U , if we could improve the best estimate of the shortest path to V by including $(\mathrm{U}, \mathrm{V})$ in the path to V . |  | Glossary V | Glossary V | 2 | Single <br> Choice | Smart | Relaxation | Tree | Degree | Relaxation |
| 33 | In $\qquad$ method, the file allocation table contains a separate one level index for each file, the index has one entry for each portion allocated to the file. |  | Glossary V | Glossary V | 2 | Single <br> Choice | Brilliant | Indexed allocation | Tree | Degree | Relaxation |
| 34 | The $\qquad$ of any vertex of a graph is the number of edges incident with vertex. |  | Glossary V | Glossary V | 2 | Single Choice | Smart | Degree | Tree | Degree | Relaxation |
| 35 | A graph is called a $\qquad$ if it is connected acyclic graph. |  | Glossary V | Glossary V | 2 | Single <br> Choice | Smart | Tree | Tree | Degree | Relaxation |

| Option4 |
| :---: |
| None of the above |
| None of the above |
| All of the mentioned |
| ABCD+/* |
| None of these |
| Complete tree |
| None of the above |

| Option4 |
| :---: |
| Stack overflow |
| Stack overflow |
| Stack overflow |
| Stack overflow |
| FIFO, First In First Out |
| FIFO, First In First Out |
| FIFO, First In First Out |
| FIFO, First In First Out |
| In-order traversal |
| In-order traversal |
| In-order traversal |
| In-order traversal |
| Insertion sort |
| Insertion sort |
| Insertion sort |
| Insertion sort |
| Indexed allocation |
| Indexed allocation |
| Indexed allocation |
| Indexed allocation |
