NOIDA INSTITUTE OF ENGINEERING AND TECHNOLOGY, GREATER NOIDA
(An Autonomous Institute)
Affiliated to Dr. A.P.J. Abdul Kalam Technical University, Uttar Pradesh, Lucknow
MCA

## FIRST YEAR (SEMESTER-II) THEORY EXAMINATION (2020-2021)

(Objective Type)

## Subject Code: AMCA0204

Subject: Theory of Automata and Formal Languages

## General Instructions:

All questions are compulsory.
Question No- 1 to 15 are objective type question carrying 2 marks each.
Question No-16 to 35 are also objective type/Glossary based question carrying 2 marks each.

| Q.No | Question Content | Question Image | Category | Sub Category | Marks | Type | Difficulty | Correct | Option1 | Option2 | Option3 | Option4 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Which of the following is not a part of 5-tuple of Deterministic Finite Automata? |  | Single Choice Questions | Single Choice Questions | 2 | Single <br> Choice | Brilliant | Output Alphabet | Input alphabet | Transition function | Initial State | Output Alphabet |
| 2 | The Kleene star ( \Σ* )is a $\qquad$ operator on a set of symbols |  | Single Choice Questions | Single Choice Questions | 2 | Single Choice | Brilliant | unary | unary | binary | It may be unary or binary | None Of\  Above |
| 3 | Let \Σ $=\{\mathrm{a}, \mathrm{b}\}$. How many strings are there in \Σ 4 . |  | Single Choice Questions | Single Choice Questions | 2 | Single Choice | Brilliant | 16 | 256 | 16 | 4 | 64 |
| 4 | A $\qquad$ is an FSM whose output depends on the present state as well as the\ present input |  | Single Choice Questions | Single Choice Questions | 2 | Single <br> Choice | Brilliant | Mealy Machine | PDA | Mealy Machine | Moore Machine | DFA |
| 5 | R1 and R2 are two regular expressions. Which of the following is not true? |  | Single Choice Questions | Single Choice Questions | 2 | Single Choice | Brilliant | $\mathrm{R} 1-\mathrm{R} 2$ is regular expression. | $\mathrm{R} 1+\mathrm{R} 2$ is regular expression | R1-R2 is regular expression. | $\mathrm{R} *$ is regular expression | R1R2 is regular expression |
| 6 | A language is regular if and only if |  | Single Choice Questions | Single Choice Questions | 2 | Single Choice | Brilliant | accepted by DFA | accepted by DFA | accepted by PDA | accepted by LBA | accepted by Turing machine |
| 7 | Match the following grammars to their Automaton 1. Unrestricted grammar\  \  \  \  \  \  \  \ a) Pushdown automaton 2. Context-sensitive grammar\  \  \  \  b) Finite state automaton 3. Context-free grammar\  \  \  \  \  \  \  \ c) Linear-bounded automaton 4. Regular grammar\  \  \  \  \  \  \  \  \  \  \  d) Turing machine |  | Single Choice Questions | Single Choice Questions | 2 | Single <br> Choice | Brilliant | (1,d)(2,c)(3,a)(4,b) | (1,d)(2,a)(3,d)(4,c) | (1,b)(2,d)(3,c)(4,a) | (1,b)(2,c)(3,a)(4,d) | $(1, \mathrm{~d})(2, \mathrm{c})(3, \mathrm{a})(4, \mathrm{~b})$ |
| 8 | Which of the following does not belong to CFG ? |  | Single Choice Questions | Single Choice Questions | 2 | Single <br> Choice | Brilliant | End Symbol | Terminal Symbol | End Symbol | Start symbol | Non terminal Symbol |
| 9 | Type-1 grammars generate ___ languages |  | Single Choice Questions | Single Choice Questions | 2 | Single <br> Choice | Brilliant | context-sensitive | Regular | context-free | context-sensitive | All of above |
| 10 | A Turing machine that is able to simulate other Turing machines: |  | Single Choice Questions | Single Choice Questions | 2 | Single Choice | Brilliant | Universal Turing machine | $\begin{gathered} \text { Nested Turing } \\ \text { machines } \\ \hline \end{gathered}$ | Universal Turing machine | Counter machine | None of the mentioned |
| 11 | Which of the following a Turing machine does not consist of? |  | Single Choice Questions | Single Choice Questions | 2 | Single <br> Choice | Brilliant | state register | Input tape | head | state register | none of the mentioned |
| 12 | Which of the following is true for the language\ L=\  \{ap\  \| p is prime number $\}$ |  | Single Choice Questions | Single Choice Questions | 2 | Single <br> Choice | Brilliant | It is neither regular nor context-free, but accepted by a Turing machine | It is not accepted by a Turing Machine | It is regular but not context-free | It is context-free but not regular | It is neither regular nor context-free, but accepted by a Turing machine |
| 13 | Which of the following statement is false? |  | Single Choice Questions | Single Choice Questions | 2 | Single Choice | Brilliant | Undecidable problems are solvable | Decidable problems are solvable | Undecidable problems are solvable | Undecidable problems are unsolvable | All of them |
| 14 | PCP stands for? |  | Single Choice Questions | Single Choice Questions | 2 | Single Choice | Brilliant | Post Correspondence Problem | Post Correspondence Problem | Post Corresponding Problem | Pre Correspondence problem | none of the mentioned |

| Q.No | Question Content | Question Image | Category | Sub Category | Marks | Type | Difficulty | Correct | Option1 | Option2 | Option3 | Option4 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 15 | Halting problem is an example for? |  | Single Choice Questions | Single Choice Questions | 2 | Single Choice | Brilliant | undecidable problem | Decidable problem | undecidable problem | complete problem | traceable problem |
| 16 | if $M=(\{q 0, q 1, q 2, q 3\},\{0,1\}, \& d e l t a ;, q 0,\{q 3\}) \& n b s p ;$ then\ Final state is $\qquad$ |  | Glossary I | Glossary I | 2 | Single Choice | Brilliant | \{q3\} | $\{0,1\}$ | \{q3\} | \{q0,q1,q2,q3\} | q0 |
| 17 | $\begin{aligned} & \text { if M=(\{q0,q1,q2,q3\},\{0,1\},\&delta; ,q0,\{q3\}) } \\ & \text { then\&nbsp;alphabet is } \end{aligned}$ |  | Glossary I | Glossary I | 2 | Single Choice | Brilliant | \{0,1\} | \{q0,q1,q2,q3\} | \{0,1\} | q0 | \{q3\} |
| 18 | if $\mathrm{M}=(\{\mathrm{q} 0, \mathrm{q} 1, \mathrm{q} 2, \mathrm{q} 3\},\{0,1\}, \& d e l t a ;, \mathrm{q} 0,\{\mathrm{q} 3\})$ total number of states are $\qquad$ |  | Glossary I | Glossary I | 2 | Single Choice | Brilliant | \{q0,q1,q2,q3\} | \{q0,q1,q2,q3\} | \{0,1\} | q0 | \{q3\} |
| 19 | if $M=(\{q 0, q 1, q 2, q 3\},\{0,1\}, \& d e l t a ;, q 0,\{q 3\})$ then initial state is $\qquad$ |  | Glossary I | Glossary I | 2 | Single Choice | Brilliant | q0 | \{q0,q1,q2,q3\} | \{0,1\} | q0 | \{q3\} |
| 20 | In Moore machine, output is produced over the change of: $\qquad$ |  | Glossary II | Glossary II | 2 | Single Choice | Brilliant | states | Transducers | states | Input+1 | 6-Tuples |
| 21 | For a give Moore Machine, Given Input=\’ 101010\’, thus the output would be of length |  | Glossary II | Glossary II | 2 | Single <br> Choice | Brilliant | Input+1 | Transducers | states | Input+1 | 6-Tuples |
| 22 | There are $\qquad$ in the definition of Moore Machine. |  | Glossary II | Glossary II | 2 | Single Choice | Brilliant | 6-Tuples | Transducers | states | Input+1 | 6-Tuples |
| 23 | Mealy and Moore machine can be categorized as $\qquad$ |  | Glossary II | Glossary II | 2 | Single Choice | Brilliant | Transducers | Transducers | states | Input+1 | 6-Tuples |
| 24 | unrestricted grammar____ |  | Glossary III | Glossary III | 2 | Single Choice | Brilliant | Type 0 | Type 1 | Type 0 | Type 2 | Type 3 |
| 25 | Regular Grammar____ |  | Glossary III | Glossary III | 2 | Single Choice | Brilliant | Type 3 | Type 1 | Type 0 | Type 2 | Type 3 |
| 26 | context free grammar____ |  | Glossary III | Glossary III | 2 | Single Choice | Brilliant | Type 2 | Type 1 | Type 0 | Type 2 | Type 3 |
| 27 | context sensitive grammar |  | Glossary III | Glossary III | 2 | Single Choice | Brilliant | Type 1 | Type 1 | Type 0 | Type 2 | Type 3 |
| 28 | A TM is expressed as a 7-tuple (Q, T, B, \Σ, \δ, q0, F) where B denote |  | Glossary IV | Glossary IV | 2 | Single Choice | Brilliant | blank symbol | tape alphabet | initial state | blank symbol | transition function |
| 29 |  \δ, q0, F) where \δ, |  | Glossary IV | Glossary IV | 2 | Single Choice | Brilliant | transition function | tape alphabet | initial state | blank symbol | transition function |
| 30 | A TM is expressed as a 7-tuple (Q, T, B, \Σ, \δ, q0, F) where T, denote $\qquad$ |  | Glossary IV | Glossary IV | 2 | Single Choice | Brilliant | tape alphabet | tape alphabet | initial state | blank symbol | transition function |
| 31 | A TM is expressed as a 7-tuple (Q, T, B, \Σ, \δ, $\mathrm{q} 0, \mathrm{~F}$ ) where q 0 , denote $\qquad$ |  | Glossary IV | Glossary IV | 2 | Single <br> Choice | Brilliant | initial state | tape alphabet | initial state | blank symbol | transition function |
| 32 | RE languages are also called as Turing |  | Glossary V | Glossary V | 2 | Single Choice | Brilliant | recognizable languages | TRUE | recognizable languages | decidable languages | FALSE |
| 33 | REC languages are also called as Turing |  | Glossary V | Glossary V | 2 | Single Choice | Brilliant | decidable languages | TRUE | recognizable languages | decidable languages | FALSE |
| 34 | Recursive languages are subset of recursive enumerable language |  | Glossary V | Glossary V | 2 | Single Choice | Brilliant | TRUE | TRUE | recognizable languages | decidable languages | FALSE |
| 35 | Recursive enumerable languages are subset of Recursive languages |  | Glossary V | Glossary V | 2 | Single Choice | Brilliant | FALSE | TRUE | recognizable languages | decidable languages | FALSE |
