#### SEMESTER -IV

#### PLEASE NOTE:-

#### • List of MOOCs (Coursera) Based Recommended Courses for Second Year (Semester-IV) B. Tech Students

1. Machine Learning Foundations: A case study -Even Semester-19 hours-1.5 Credit

2. Building AI Powered Chatbots Without Programming-Even Semester- 9 hours- 0.5 Credit

#### • Compulsory Audit Courses (Non Credit - ANC0401/ANC0402)

- > All Compulsory Audit Courses (a qualifying exam) has no credit.
- > Total and obtained marks are not added in the Grand Total.

#### Abbreviation Used:-

L: Lecture, T: Tutorial, P: Practical, CT: Class Test, TA: Teacher Assessment, PS: Practical Sessional, TE: Theory End Semester Exam., PE: Practical End Semester Exam.

#### **AICTE Guidelines in Model Curriculum:**

A student will be eligible to get Under Graduate degree with Honours only, if he/she completes the additional MOOCs courses such as Coursera certifications, or any other online courses recommended by the Institute (Equivalent to 20 credits). During Complete B.Tech. Program Guidelines for credit calculations are as follows.

- 1. For 6 to 12 Hours =0.5 Credit
- 2. For 13 to18 =1 Credit
- 3. For 19 to 24 =1.5 Credit
- 4. For 25 to 30 =2 Credit
- 5. For 30 to 35 =2.5 Credit
- 6. For 36 to 41 = 3 Credit
- 7. For 42 to 47 =3.5 Credit
- 8. For 48 and above =4 Credit

For registration to MOOCs Courses, the students shall follow Coursera registration details as per the assigned login and password by the Institute these courses may be cleared during the B. Tech degree program (as per the list provided). After successful completion of these MOOCs courses, the students shall provide their successful completion status/certificates to the Controller of Examination (COE) of the Institute through their coordinators/Mentors only.

The students shall be awarded Honours Degree as per following criterion.

- i. If he / she secures 7.50 as above CGPA.
- ii. Passed each subject of that degree program in the single attempt without any grace.
- iii. Successful completion of MOOCs based 20 credits.

0 0		<b>B. TECH. SECOND YEAR</b>	
<b>Course Co</b>	ode	AAS0303 L T P	Credit
Course Ti	tle	Statistics And Probability 3 1 0	4
Course of	ojectiv	e: The objective of this course is to familiarize the engineers with conce	pt of Statistical
techniques, p	probabi	lity distribution, hypothesis testing and ANOVA and numerical aptitude. It air	ms to show case
		tandard concepts and tools from B. Tech to deal with advanced level of m	nathematics and
applications	that we	buld be essential for their disciplines.	
Pre-requis	sites: 1	Knowledge of Mathematics I and II of B. Tech or equivalent	
		Course Contents / Syllabus	
UNIT-I		Descriptive measures	8 Hours
quartile devi Covariance, correlation c	ation, v Corre oeffici	tendency – mean, median, mode, measures of dispersion – mean deviation, star variance, Moment, Skewness and kurtosis, least squares principles of curve fit lation and Regression analysis, Correlation coefficient: Karl Pearson co ent, uni-variate and multivariate linear regression, application of regression and ries analysis- Trend analysis (Least square method).	ting, oefficient, rank
UNIT-II		Probability and Random variable	8 Hours

	<b>B.TECH SECOND YEAR</b>		
Course Code	ACSE0302	LTP	Credit
<b>Course Title</b>	<b>Object Oriented Techniques using Java</b>	3 0 0	3
develop conceptual and other standard concepts of object-	e: is course is to understand the object-oriented methodolog models and demonstrate the standard concepts of object-or- language constructs. The basic objective of this course oriented programming in Java language and also implemen nd collection framework.	riented techniques is to understand	s modularity, I/O. the fundamental
Pre-requisites:			
line shell.	st know at least the basics of how to use a computer, and sh of basic programming concepts, as covered in 'Programmi		
	Course Contents / Syllabus		0.77
UNIT-I	Introduction		8 Hours
	Basics of Java Programming Object Reference, Constructor, Abstract Class, Interface a	nd its uses, Defin	8 Hours
of "this" and "supe	r" keyword, Garbage Collection and finalize () Method.		
	duction and Types of Inheritance in Java, Constructors in Ir	heritance.	
• •	troduction and Types, Overloading and Overriding.		
-	on: Introduction and Working with Lambda Variables.		
Arrays: Introduction	Packages, Exception Handling and String Ha	andling	8 Hours
	ction and Types, Access Protection in Packages, Import and	0	
<b>Exception Handlin</b> Exception. Finally, Assertions and Loc	<b>ng, Assertions and Localizations:</b> Introduction and Types, Throws and Throw keyword, Multiple Catch Block, Nestec alizations Concepts and its working. Introduction and Types, Operations, Immutable String, Me	Exceptions vs. En I Try and Finally I	rrors, Handling of Block, Tokenizer
UNIT-IV	<b>Concurrency in Java and I/O Stream</b>		8 Hours
Runnable Class, Sy	tion and Types, Creating Threads, Thread Life-Cycle, T nchronizing Threads. luction and Types, Common I/O Stream Operations, Interac		

UNIT-V	GUI Programming, Generics and Collections8	Hours
<b>GUI Prog</b>	ramming: Introduction and Types, Swing, AWT, Components and Containers, Layout Ma	nagers and
User-Defin	ned Layout and Event Handling.	
Generics	and Collections: Introduction, Using Method References, Using Wrapper Class, Using I	Lists, Sets,
Maps and	Queues, Working with Generics.	
Course o	<b>outcome:</b> After completion of this course students will be able to:	
CO1	Identify the concepts of object-oriented programming and relationships among them needed in modeling.	K2
CO2	Demonstrate the Java programs using OOP principles and also implement the concepts of lambda expressions.	К3
CO3	Implement packages with different protection level resolving namespace collision and evaluate the error handling concepts for uninterrupted execution of Java program.	K3, K5
CO4	Implement Concurrency control, I/O Streams and Annotations concepts by using Java program.	К3
CO5	Design and develop the GUI based application, Generics and Collections in Java programming language to solve the real-world problem.	K6

**Tree Traversal algorithms**: In-order, Pre-order and Post-order. Constructing Binary Tree from given Tree Traversal, Operation of Insertion, Deletion, Searching & Modification of data in Binary Search tree, Binary Heaps, Heap sort, Threaded Binary trees, Traversing Threaded Binary trees, AVL Tree, B-Tree.

**UNIT-V** Graphs and File Structure

8 Hours

**Graphs:** Terminology used with Graph, Data Structure for Graph Representations: Adjacency matrices, Adjacency List.

**Graph Traversal:** Depth First Search and Breadth First Search. Connected Component, Spanning Trees, Minimum Cost Spanning Trees: Prim' s and Kruskal's algorithm. Transitive Closure and Shortest Path algorithms: Dijkstra Algorithm.

**File Structure:** Concepts of files, records and files, Sequential, Indexed and Random File Organization, indexing structure for index files, Hashing: The symbol table, Hashing Functions, Collision-Resolution Techniques, hashing for direct files, multi-Key file organization and Access Methods.

Course	outcome: After completion of this course students will be able to:	
CO 1	Describe the need of data structure and algorithms in problem solving and analyze Time space trade-off.	K2, K4
CO 2	Describe how arrays are represented in memory and how to use them for implementation of matrix operations, searching and sorting along with their computational efficiency.	K2, K6
CO 3	Compare and contrast the advantages and disadvantages of linked lists over arrays and implement operations on different types of linked list.	K4, K6
CO 4	Design, implement and evaluate the real-world applications using stacks, queues and non-linear data structures.	K5, K6
CO 5	Identify and develop the alternative implementations of data structures with respect to its performance to solve a real-world problem.	K1, K3, K5, K6

Lab Cou	irse Ou	<b>Itcome:</b> After completion of this course students will be a	able to	
CO 1 Ap	oply sear	ching problems using various algorithms. Explain function	nality of Chat-bot.	K

CO 2	Identify problems that are amenable to solution by AI methods, and which AI methods may be suited to solving a given problem.	K1
CO 3	Implement the program to POS (Parts of Speech) tagging for the give sentence using NLTK.	K3
CO 4	Design and carry out an empirical evaluation of different algorithms on a problem formalization, and state the conclusions that the evaluation supports.	K3
CO5	Implement basic AI algorithms (e.g., standard search algorithms or dynamic programming).	K3

Role of community, women and NGOs in environmental protection, Bioindicators and their role, Natural hazards, Chemical accidents and disasters risk management, Environmental Impact Assessment (EIA), Salient features of following Acts: a. Environmental Protection Act, 1986, Wildlife (Protection) Act, 1972.b. Water (Prevention and control of pollution) Act, 1974.c. Air (Prevention and control of pollution) Act, 1981. Forest (Conservation) Act, 1980.d. Wetlands (Conservation and Management) Rules, 2017; e. Chemical safety and Disaster Management law. F. District Environmental Action Plan. Climate action plans.

**Course outcome:** After completion of this course students will be able to

CO 1	Understand the basic principles of ecology and environment. Ecosystem: Basic concepts,	K2
	components of ecosystem., food chains and food webs. Ecological pyramids	
CO 2	Understand the different types of natural recourses like food, forest, minerals and energy and their	K2
	conservation	
CO 3	Understand the importance of biodiversity, Threats of biodiversity and different methods of	K2
	biodiversity conservation.	
CO 4	Understand the different types of pollution, pollutants, their sources, effects and their control	K3
	methods	
CO 5	Understand the basic concepts of sustainable development, Environmental Impact Assessment	K3
	(EIA) and different acts related to environment

	B. TECH. SECOND YEAR		
Course Code	AASL0401 L	ΓР	Credit
<b>Course Title</b>	Technical Communication2	0	3
Course objectiv			•
1	To help the students develop communication and critical thinking skills ne	cessa	ry for
	securing a job, and succeeding in the diverse and ever-changing workplace	e of th	ne twenty
	first century		
2	To enable students to communicate effectively in English at the workplace		
Pre-requisites:			
	t must have a good degree of control over simple grammatical forms and	some	complex
	l forms of English language.		
• The student	should be able to speak English intelligibly.		
	Course Content / Syllabus	- 1	
UNIT-I	Introduction to Technical Communication and Reading	4	4 Hours
• Fundament	als of technical communication	1	
• Role of tecl	nnical communication		
Reading Co	mprehension - central idea, tone, and intention		
Critical rea	ding strategies		
UNIT-II	Technical Writing 1		5 Hours
• Characteris	tics of technical writing; technical vocabulary, etymology		
	tters /emails – types, format, style and language		
	enda and minutes		
• Job applica	tion, CV and resume		
UNIT-III	Technical Writing 2		5 Hours
	eports – types & formats		
• Structure of	1		
	Proposal - structure and types		
• Technical/	Scientific paper writing		
UNIT-IV	Public Speaking		5 Hours
• Component	s of effective speaking (emphasis on voice dynamics)		
	d conference presentation		
-	/ participating in meetings		
11 0	for a job interview		
Mobile etiq			
UNIT-V	Manuscript Preparation		5 Hours
• Short repor	•		
	g and referencing		
	writing style – Jargons, Abbreviations		
• Ethical writ			
Course outcom	<b>e:</b> At the end of the course the students will be able to Levels.

Definition of NoSQL, History of NoSQL and Different NoSQL products, Exploring Mongo DB, Interfacing and Interacting with NoSQL, NoSQL Storage Architecture, CRUD operations with MongoDB, Querying, Modifying and Managing NoSQL Data stores, Indexing and ordering datasets(MongoDB).

Cloud database: - Introduction of Cloud database, NoSQL with Cloud Database, Introduction to Real time Database.

<b>Course outcome:</b> After completion of this course students will be able to:			
CO 1	Analyze database used to solve real world and complex problem and design the ER, EER Model.	K4	
CO 2	Analyze and apply Structured Query Language (SQL) or Procedural Query Language (PL/SQL) to solve the complex queries. Implement relational model, integrity constraints.	K4,K3	
CO 3	Design and implement database for storing, managing data efficiently by applying the Normalization process on the database.	K6	
CO 4	Synthesize the concepts of transaction management, concurrency control and recovery.	K5	
CO 5	Understand and implement the concepts of NoSQL with cloud database.	K2, K5

	<b>B. TECH. SECOND YEAR</b>	
Course code	ACSML0401N L T P	Credits
Course title	MACHINE LEARNING3 0 0	3
U	<b>tive:</b> To introduction to the fundamental concepts in machine learning and popular manderstand the standard and most popular supervised learning algorithm.	achine learning
Pre-requisites	Basic Knowledge of Machine learning.	
	Course Contents / Syllabus	
UNIT-I	INTRODUCTION TO MACHINE LEARNING	8 Hours
INTRODUCTIC	N – Learning, Types of Learning, Well defined learning problems, Designing a Lea	arning System,
History of ML, I	ntroduction of Machine Learning Approaches, Introduction to Model Building, Sensit	tivity Analysis,
Underfitting and	Overfitting, Bias and Variance, Concept Learning Task, Find - S Algorithms, Vers	sion Space and
Candidate Elimi	nation Algorithm, Inductive Bias, Issues in Machine Learning and Data Science	e Vs Machine
Learning.		
	MINING ACCOUNTION AND SUDEDVICED LEADNING	0.11
UNIT-II	MINING ASSOCIATION AND SUPERVISED LEARNING and Regression, Regression: Linear Regression, Multiple Linear Regression, Logist	8 Hours
• •	ression, Decision Trees: ID3, C4.5, CART. hm: Market basket analysis, Association Rules.	
	s: Introduction, Perceptron, Multilayer Perceptron, Support vector machine.	
UNIT-III	I I NSI DEDVISEN E FADNINC	
VI 18 8 888	UNSUPERVISED LEARNING	8 Hours
Introduction to c continuous, categ	lustering, K-means clustering, K-Nearest Neighbor, Iterative distance-based clustering gorical values in K-Means, Hierarchical: AGNES, DIANA, Partitional: K-means cluster ty-based clustering, Expectation Maximization, Gaussian Mixture Models.	g, Dealing with
Introduction to c continuous, categ Clustering, densi	lustering, K-means clustering, K-Nearest Neighbor, Iterative distance-based clustering gorical values in K-Means, Hierarchical: AGNES, DIANA, Partitional: K-means cluster	ering, K-Mode
Introduction to c continuous, categ Clustering, densi UNIT-IV	lustering, K-means clustering, K-Nearest Neighbor, Iterative distance-based clustering gorical values in K-Means, Hierarchical: AGNES, DIANA, Partitional: K-means cluster ty-based clustering, Expectation Maximization, Gaussian Mixture Models. <b>PROBABILISTIC LEARNING &amp; ENSEMBLE</b>	g, Dealing with
Introduction to c continuous, categ Clustering, densi UNIT-IV Bayesian Learnin Ensembles met	lustering, K-means clustering, K-Nearest Neighbor, Iterative distance-based clustering gorical values in K-Means, Hierarchical: AGNES, DIANA, Partitional: K-means cluster ty-based clustering, Expectation Maximization, Gaussian Mixture Models.	g, Dealing with ering, K-Mode <b>8 Hours</b>
Introduction to c continuous, categ Clustering, densi <b>UNIT-IV</b> Bayesian Learnin	lustering, K-means clustering, K-Nearest Neighbor, Iterative distance-based clustering gorical values in K-Means, Hierarchical: AGNES, DIANA, Partitional: K-means cluster ty-based clustering, Expectation Maximization, Gaussian Mixture Models. <b>PROBABILISTIC LEARNING &amp; ENSEMBLE</b> ng, Bayes Optimal Classifier, Naive Bayes Classifier, Bayesian Belief Networks.	g, Dealing with ering, K-Mode <b>8 Hours</b>
Introduction to c continuous, categ Clustering, densi UNIT-IV Bayesian Learnin Ensembles met XGBoost. UNIT-V Reinforcement Learning in Prace	Iustering, K-means clustering, K-Nearest Neighbor, Iterative distance-based clustering         gorical values in K-Means, Hierarchical: AGNES, DIANA, Partitional: K-means cluster         ty-based clustering, Expectation Maximization, Gaussian Mixture Models.         PROBABILISTIC LEARNING & ENSEMBLE         ng, Bayes Optimal Classifier, Naive Bayes Classifier, Bayesian Belief Networks.         hods: Bagging & boosting, C5.0 boosting, Random Forest, Gradient Boosting	g, Dealing with ering, K-Mode <b>8 Hours</b> Machines and <b>8 Hours</b> Reinforcement
Introduction to c continuous, categ Clustering, densi UNIT-IV Bayesian Learnin Ensembles met XGBoost. UNIT-V Reinforcement Learning in Prace function, QLearn	Iustering, K-means clustering, K-Nearest Neighbor, Iterative distance-based clustering         gorical values in K-Means, Hierarchical: AGNES, DIANA, Partitional: K-means cluster         ty-based clustering, Expectation Maximization, Gaussian Mixture Models.         PROBABILISTIC LEARNING & ENSEMBLE         ng, Bayes Optimal Classifier, Naive Bayes Classifier, Bayesian Belief Networks.         hods: Bagging & boosting, C5.0 boosting, Random Forest, Gradient Boosting         REINFORCEMENT LEARNING & CASE STUDIES         Learning: Introduction to Reinforcement Learning, Learning Task, Example of Extice, Learning Models for Reinforcement – (Markov Decision process, Q Learning	g, Dealing with ering, K-Mode <b>8 Hours</b> Machines and <b>8 Hours</b> Reinforcement
Introduction to c continuous, categ Clustering, densi UNIT-IV Bayesian Learnin Ensembles met XGBoost. UNIT-V Reinforcement Learning in Prac function, QLearr Case Study: Hea	Instering, K-means clustering, K-Nearest Neighbor, Iterative distance-based clustering         Instering, K-means clustering, K-Nearest Neighbor, Iterative distance-based clustering         Instering, Expectation Maximization, Gaussian Mixture Models.         PROBABILISTIC LEARNING & ENSEMBLE         ng, Bayes Optimal Classifier, Naive Bayes Classifier, Bayesian Belief Networks.         hods:       Bagging & boosting, C5.0 boosting, Random Forest, Gradient Boosting         REINFORCEMENT LEARNING & CASE STUDIES         Learning:       Introduction to Reinforcement Learning, Learning Task, Example of Extice, Learning Models for Reinforcement — (Markov Decision process, Q Learning hing Algorithm), Application of Reinforcement Learning.	g, Dealing with ering, K-Mode <b>8 Hours</b> Machines and <b>8 Hours</b> Reinforcement
Introduction to c continuous, categ Clustering, densi UNIT-IV Bayesian Learnin Ensembles met XGBoost. UNIT-V Reinforcement Learning in Prac function, QLearr Case Study: Hea	Instering, K-means clustering, K-Nearest Neighbor, Iterative distance-based clustering         gorical values in K-Means, Hierarchical: AGNES, DIANA, Partitional: K-means cluster         ty-based clustering, Expectation Maximization, Gaussian Mixture Models.         PROBABILISTIC LEARNING & ENSEMBLE         ng, Bayes Optimal Classifier, Naive Bayes Classifier, Bayesian Belief Networks.         hods: Bagging & boosting, C5.0 boosting, Random Forest, Gradient Boosting         REINFORCEMENT LEARNING & CASE STUDIES         Learning: Introduction to Reinforcement Learning, Learning Task, Example of Extice, Learning Models for Reinforcement — (Markov Decision process, Q Learning ing Algorithm), Application of Reinforcement Learning.         alth Care, E Commerce, Smart Cities.	g, Dealing with ering, K-Mode <b>8 Hours</b> Machines and <b>8 Hours</b> Reinforcement

CO3	Understand the difference between supervise and unsupervised learning.	K2
CO4	Understand algorithmic topics of machine learning and mathematically deep enough to introduce the required theory.	K2
CO5	Apply an appreciation for what is involved in learning from data.	K3

	<b>B. TECH. SECOND YEAR</b>		
Course Code	ACSE0404	LTP	Credits
<b>Course Title</b>	Theory of Automata and Formal Languages	300	3
Course objecti			
	tical foundations of computation including automata theory, provide	-	-
-	on model of finite automata, push down automata and turing Mach	ine and far	niliarize the
notions of algorith	m, decidability, complexity, and computability.		
Pre-requisites:			
• Discrete M	athematics		
• Fundamen	al of Computer System		
	Course Contents / Syllabus		
UNIT-I I	Basic Concepts of Formal Language and Automata The	ory	8 Hours
Introduction to Th	eory of Computation- Alphabet, Symbol, String, Formal Languages	, Grammar	, Derivation
and Language gen	eration by Grammar, Chomsky Hierarchy, Finite Automata, Determin	nistic Finite	Automaton
(DFA)- Definition	n, Representation, Acceptability of a String and Language, No	n-Determir	nistic Finite
Automaton (NFA)	, Equivalence of DFA and NFA, NFA with ∈-Transition, Equivalent	nce of NFA	's with and
without ∈-Transiti	on, Finite Automata with output- Moore Machine, Mealy Machine,	Equivalen	ce of Moore
and Mealy Machin	e, Minimization of Finite Automata, Myhill-Nerode Theorem, Simul	ation of DF	A and NFA.
UNIT-II I	Regular Language and Finite Automata		8 Hours
Regular Expressio	ns, Transition Graph, Kleen's Theorem, Finite Automata and Regula	ar Expressi	on- Arden's
theorem, Algebra	c Method Using Arden's Theorem, Regular Grammars-Right L	inear and	Left Linear
grammars, Conver	sion of FA into Regular grammar and Regular grammar into FA, Re	gular and N	lon-Regular
Languages- Closu	re properties of Regular Languages, Pigeonhole Principle, Pumping	Lemma, Ap	plication of
Pumping Lemma.		_	-
	sion properties, Finite Automata and Regular Languages, Simulation		
Decidability- Dec	······································	on of Trans	sition Graph
Decidability- Deci and Regular langu		on of Trans	ition Graph
and Regular langu		on of Trans	sition Graph 8 Hours
and Regular langu	age.		8 Hours
and Regular langu UNIT-III ( Context Free Gr	age. Context Free Language and Grammar	Frees and	8 Hours Ambiguity,

Non-Recursively Enumerable and Non-Recursive Languages, Undecidability, Halting Problem, Undecidability of Halting Problem, Post's Correspondence Problem.

Ondeeld	ability of Haiting Hobieni, Host's Conceptinence Hobieni.			
Course	<b>outcome:</b> After completion of this course students will be able to:			
CO 1	Design and Simplify automata for formal languages and transform non-deterministic finite	K6		
	automata to deterministic finite automata.			
CO 2	Identify the equivalence between the regular expression and finite automata and apply	K3		
	closure properties of formal languages to construct finite automata for complex problems.			
CO 3				
005	language being context- free.			
CO 4	Design pushdown automata (PDA) for context free languages and Transform the PDA to	K6		
CO 4		K0		
	context free grammar and vice-versa.	17.6		
CO 5	Construct Turing Machine for recursive and recursive enumerable languages. Identify the	K6		
	decidable and undecidable problems.

	B. TECH. SECOND YEAR		
<b>Course Code</b>	e ACSE0453A	LTP	Credits
<b>Course Title</b>	Operating Systems Lab	0 0 2	1
List of Expe	riments:		
Sr. No.	Name of Experiment		CO
1. Linux based Commands	Lab1: Execute Various types of Linux Commands (Miscellaneous, I Directory oriented)         Lab2: Shell Programming         Write a shell program, which accepts the name of a file from standar perform the following test on it: <ol> <li>File readable</li> <li>File writable</li> <li>Both readable and writable</li> </ol>		
2. CPU Scheduling Algorithms	Lab3: Implement CPU Scheduling Algorithms: <ol> <li>FCFS</li> <li>SJF</li> <li>PRIORITY</li> </ol> <li>Lab4: <ol> <li>Round Robin</li> <li>Multi-level Queue Scheduling</li> </ol></li>		CO3
3. Deadlock Management	<b>Lab5:</b> Implementation of Banker's algorithm for the purpose of Dea Avoidance.	udlock	CO3
4. Memory Management Techniques 5. Disk	Lab6: Write a program to simulate the following contiguous memor         techniques:         a) First fit         b) Best fit         c) Worst Fit         Lab7: a) Write a Program for implementation of Contiguous memor         partition technique.         b) Write a program for implementation of Contiguous memory varia         technique.         Lab8: Write a program to simulate page replacement algorithms:         a) FIFO         b) LRU         c) Optimal         Lab9: Write a program to simulate Disk Scheduling Algorithms:	ory fixed	
Scheduling Techniques	a) FCFS b) SSTF Lab 10: c) SCAN & C-SCAN d) Look & C-LOOK		
6. Process Synchronizatio	Lab11: Write a program to simulate Producer Consumer problem         on         atcome: After completion of this course students will be able to		CO2
			V2
	n all round knowledge of various Linux Commands.		K2
CO2 Ana	lyze and implement Process Synchronization technique.		K4,K5

CO3	Analyze and implement CPU scheduling algorithms.	K4, K5
CO4	Analyze and implement Memory allocation and Memory management techniques.	K4, K5
CO5	Analyze and implement Disk Scheduling Policies.	K4, K5

Course	Code	ACSAI0452	LTP	Credit
Course	Title	Database Management Systems Lab	0 0 2	1
List of l	Experim	ients:		
Sr. No.		Name of Experiment		CO
1.	Installir	ng ORACLE/ MYSQL/NOSQL.		CO1
2.	attribute	g Entity-Relationship Diagram using case tools with Identifying es, keys and relationships between entities, cardinalities, general zation etc.)		CO1
3.		Implement DDL commands –Create, Alter, Drop etc. Implement DML commands- Insert, Select, Update, Delete		CO2
4.	I. II.	Implement DCL commands-Grant and Revoke Implement TCL commands- Rollback, Commit, Save point Implement different type key: -Primary Key, Foreign Key and U	Jnique etc.	CO2
5.		ing ER Model to Relational Model (Represent entities and relation form, Represent attributes as columns, identifying keys).	onships in	CO1, CO2
6.		Queries using COUNT, SUM, AVG, MAX, MIN, GROUP BY, G, VIEWS Creation and Dropping.	,	CO2
7.	Practicing Queries using ANY, ALL, IN, EXISTS, NOT EXISTS, UNION, INTERSECT, CONSTRAINTS etc.		CO2	
8.	Practicing Sub queries (Nested, Correlated) and Joins (Inner, Outer and Equi).		CO2	
9.	<b>Practicing on Triggers</b> - creation of trigger, Insertion using trigger, Deletion using trigger, Updating using trigger		CO4	
10.	<b>Procedures-</b> Creation of Stored Procedures, Execution of Procedure, and Modification of Procedure		CO4	
11.	<b>Cursors-</b> Declaring Cursor, Opening Cursor, Fetching the data, closing the cursor.		CO4	
12.	Study of Open Source NOSQL Database: MongoDB (Installation, Basic CRUD operations, Execution)		CO5	
13.	Design and Develop MongoDB Queries using CRUD operations. (Use CRUD operations, SAVE method, logical operators)		CO5	
14.	Implement aggregation and indexing with suitable example using MongoDB.		CO5	
15.	<ul><li>a) Inven</li><li>b) Mate</li><li>c) Hospi</li><li>d) Railw</li></ul>	oject (Design & Development of Data and Application) for follow atory Control System. rial Requirement Processing. tal Management System. ray Reservation System. nal Information System.	wing: -	CO1

f	Web Based User Identification System.	
g	) Timetable Management System.	
1	n) Hotel Management System	
Lab Cou	rse Outcome: After completion of this course students will be able to	
CO 1	Design and implement the ER, EER model to solve the real-world problem and	K6
	transform an information model into a relational database schema and to use a data.	
CO 2	Formulate and evaluate query using SQL solutions to a broad range of query and data	K6
	update problems.	
CO 3	Apply and create PL/SQL blocks, procedure functions, packages and triggers,	K3, K6
	cursors.	
CO 4	Analyze entity integrity, referential integrity, key constraints, and domain	K4
	constraints on database.	
CO5	Demonstrate understanding of MongoDB and its query operations.	K3

B. TECH. SECOND-YEAR				
Course code	ACSML0451N LTP	Credit		
<b>Course title</b>	MACHINE LEARNING LAB 0 0 2	1		
List of Expe	riments:			
Sr. No.	Name of Experiment	CO		
1	Write a program to perform various types of regression (Linear & Logistic).	CO2		
2	Implement Apriori algorithm using sample data in Python.	CO1		
3	Write a program to demonstrate the working of the decision tree based ID3algorithm. Use an appropriate data set for building the decision tree and apply this knowledge to classify a new sample.	CO2		
4	Write a program to implement k-Nearest Neighbour algorithm to classify the iris dataset. Print both correct and wrong predictions. Java/Python ML library classes can be used for this problem.	CO1		
5	Apply EM algorithm to cluster a set of data. Use the same data set for clustering using k-Means algorithm. Compare the results of these two algorithms and comment on the quality of clustering.	CO3		
6	Implement Support Vector Machine using Scikit-learn.	CO5		
7	Implement the non-parametric Locally Weighted Regression algorithm to fit data points. Select appropriate data set for your experiment and draw graphs.	CO1		
8	8 Implement Gradient Boosting Machine Ensemble in Python.			
9	Implement of ANN algorithm using a sample dataset.	CO2		
10	Implement naïve Bayesian Classifier model. Write the program to calculate the accuracy, precision, and recall for your data set.	CO4		
Lab Course	Outcome:			
CO1	Understand the implementation procedures for the machine learning algorithms.	K2		
CO2	Identify and apply Machine Learning algorithms to solve real-world problems.	K1

Role of community, women and NGOs in environmental protection, Bioindicators and their role, Natural hazards, Chemical accidents and disasters risk management, Environmental Impact Assessment (EIA), Salient features of following Acts: a. Environmental Protection Act, 1986, Wildlife (Protection) Act, 1972.b. Water (Prevention and control of pollution) Act, 1974.c. Air (Prevention and control of pollution) Act, 1981. Forest (Conservation) Act, 1980.d. Wetlands (Conservation and Management) Rules, 2017; e. Chemical safety and Disaster Management law. F. District Environmental Action Plan. Climate action plans.

<b>Course outcome:</b> After completion of this course students will be able to			
CO 1	Understand the basic principles of ecology and environment. Ecosystem: Basic concepts,	K2	
	components of ecosystem., food chains and food webs. Ecological pyramids		
CO 2	Understand the different types of natural recourses like food, forest, minerals and energy and their conservation	K2	
CO 3	Understand the importance of biodiversity, Threats of biodiversity and different methods of biodiversity conservation.	K2	
CO 4	Understand the different types of pollution, pollutants, their sources, effects and their control methods	K3	
CO 5	Understand the basic concepts of sustainable development, Environmental Impact Assessment (EIA) and different acts related to environment	K3
