		<b>GRAND TOTAL</b>										1100	24

#### **PLEASE NOTE:-**

#### • List of MOOCs (Coursera) Based Recommended Courses for Second Year (Semester-IV) B. Tech Students

- 1. Python project For Data Science-Even Semester-6Hours- 0.5 Credit
- 2. Introduction to NoSQL Databases-Even Semester- 17 Hours- 1 Credit
- Compulsory Audit Courses (Non Credit ANC0401/ANC0402)
- > All Compulsory Audit Courses (a qualifying exam) has no credit.
- > Total and obtained marks are not added in the Grand Total.

#### Abbreviation Used:-

L: Lecture, T: Tutorial, P: Practical, CT: Class Test, TA: Teacher Assessment, PS: Practical Sessional, TE: Theory End Semester Exam., PE: Practical End Semester Exam.

#### **AICTE Guidelines in Model Curriculum:**

A student will be eligible to get Under Graduate degree with Honours only, if he/she completes the additional MOOCs courses such as Coursera certifications, or any other online courses recommended by the Institute (Equivalent to 20 credits). During Complete B.Tech. Program Guidelines for credit calculations are as follows.

- 1. For 6 to 12 Hours =0.5 Credit
- 2. For 13 to18 =1 Credit
- 3. For 19 to 24 =1.5 Credit
- 4. For 25 to 30 =2 Credit
- 5. For 30 to 35 =2.5 Credit
- 6. For 36 to 41 = 3 Credit
- 7. For 42 to 47 =3.5 Credit
- 8. For 48 and above =4 Credit

For registration to MOOCs Courses, the students shall follow Coursera registration details as per the assigned login and password by the Institute these courses may be cleared during the B. Tech degree program (as per the list provided). After successful completion of these MOOCs courses, the students shall provide their successful completion status/certificates to the Controller of Examination (COE) of the Institute through their coordinators/Mentors only.

The students shall be awarded Honours Degree as per following criterion.

- i. If he / she secures 7.50 as above CGPA.
- ii. Passed each subject of that degree program in the single attempt without any grace.
- iii. Successful completion of MOOCs based 20 credits.

	B. TECH. SECOND YEAR						
Course	Code	AAS0303	L T P	Credit			
Course	Title	Statistics and Probability	3 1 0	4			
Course	objectiv	e: The objective of this course is to familiarize the engineer	ers with conce	ept of Statistical			
technique	es, probabi	lity distribution, hypothesis testing and ANOVA and numerical	l aptitude. It ai	ims to show case			
the stude	ents with s	tandard concepts and tools from B. Tech to deal with advan-	ced level of 1	nathematics and			
application	ons that we	ould be essential for their disciplines.					
Pre-req	uisites: 1	Knowledge of Mathematics I and II of B. Tech or equivalent					
		<b>Course Contents / Syllabus</b>		1			
UNIT-I	[	Descriptive measures		8 Hours			
Measures	s of central	tendency - mean, median, mode, measures of dispersion - mean	n deviation, sta	undard deviation,			
quartile d	leviation, v	variance, Moment, Skewness and kurtosis, least squares princip	les of curve fi	tting,			
Covarian	ce,Correla	tion and Regression analysis, Correlation coefficient: Ka	rl Pearson c	oefficient, rank			
correlatio	on coeffici	ent, uni-variate and multivariate linear regression, application	of regression a	analysis,Logistic			
Regressio	on, time se	ries analysis- I rend analysis (Least square method).					
LINIT I	T	Probability and Random variable		8 Hours			
Probabil	l <b>i</b> ty Definit	ion The Law of Addition Multiplication and Conditional Prob	ability Bayes	' Theorem			
Random	n variables	discrete and continuous probability mass function density f	function distr	ibution function			
Mathem	atical ext	pectation, mean, variance. Moment generating function,	characteristic	function. Two			
dimensi	onal rando	m variables: probability mass function, density function,		,			
UNIT-I	Π	Probability distribution		8 Hours			
Probabil	lity Distrib	ution (Continuous and discrete- Normal, Exponential, Binomial	, Poisson distr	ribution), Central			
Limit th	eorem						
IINIT I	N/	Test of Hynothesis & Statistical Inference		8 Hours			
Sampling	$\frac{1}{1}$	ulation uni-variate and hi-variate sampling re-sampling e	rrors in sam	o mours			
distributi	ons Hypo	thesis testing- n value z test (For mean) Confidence int	ervals F test	Chi-square test			
ANOVA	: One way	ANOVA.	ervuis, r test,	em square test,			
Statistica	l Inference	e, Parameter estimation, Least square estimation method, Maxir	num Likeliho	od estimation.			
UNIT-V	V	Aptitude-III		8 Hours			
Time & V	Work, Pipe	& Cistern, Time, Speed & Distance, Boat & Stream, Sitting Ar	rangement, Cl	ock & Calendar.			
<b>Course outcome:</b> After completion of this course students will be able to:							
CO 1	Understar	nd the concept of moments, skewness, kurtosis, correlation, curv	ve fitting and	K1, K3			
	regression	n analysis.		·			
CO 2	Understar	nd the concept of Probability and Random variables.		K1, K3			
CO 3	Remember	er the concept of probability to evaluate probability distribution	S	K3, K4			
CO 4	Apply the	concept of hypothesis testing and estimation of parameter.		K2			
		· · · ·					

CO 5	Solve the problems of Time & Work, Pipe & Cistern, Time, Speed & Distance, Boat	К3
	&Stream, Sitting Arrangement, Clock & Calendar.

		<b>B.TECH SECOND YEAR</b>				
Course Co	ode	ACSE0306	L	Т	Р	Credits
Course Ti	itle	DISCRETE STRUCTURES	3	0	0	3
Course of	bjectiv	e:	1			
The subject discrete stru techniques a	enhanc cture is and expl	es one's ability to develop logical thinking and ability to to enables students to formulate problems precisely, solve ain their reasoning clearly.	prol e the	blem prob	-solvin lems,	g. The objective of apply formal proofs
Pre-requi	sites:					
1. Basic U	Inderst	anding of mathematics				
2. Basic ki	nowled	lge algebra.				
3. Basic ki	nowled	lge of mathematical notations				
		<b>Course Contents / Syllabus</b>				
Unit 1	Set Th	eory, Relation, Function				8 Hours
Set Theory: Introduction to Sets and Elements, Types of sets, Venn Diagrams, Set Operations, Multisets, Ordered pairs. Proofs of some general Identities on sets.Relations: Definition, Operations on relations, Pictorial Representatives of Relations, Properties of relations, Composite Relations, Recursive definition of relation, Order of relations.Functions: Definition, Classification of functions, Operations on functions, Growth of Functions.Combinatorics : Introduction, basic counting Techniques, Pigeonhole Principle.Recurrence Relation & Generating function: Recursive definition of functions, Recursive Algorithms, Method of solving Recurrences.Proof techniques: Mathematical Induction, Proof by Contradiction, Proof by Cases, Direct Proof.Unit 2Algebraic Structures8 HoursAlgebraic Structures: Definition, Operation, Groups, Subgroups and order, Cyclic Groups, Cosets, Lagrange's theorem, Normal Subgroups, Permutation and Symmetric Groups, Group Homomorphisms, Rings, Internal						Multisets, Ordered es of relations, ons. Igorithms, Method of. <b>8 Hours</b> osets, Lagrange's ngs, Internal
Unit 3 I	Lattice	s and Boolean Algebra				8 Hours
Ordered set, ordered set.	, Posets Propert	, Hasse Diagram of partially ordered set, Lattices: Introduction ies of Lattices, Bounded and Complemented Lattices. Distr	ction. ibuti	, Isor ve La	norphi attices.	c Ordered set, Well
<b>Boolean Al</b> Expressions	<b>gebra</b> : s, Simpl	Introduction, Axioms and Theorems of Boolean Algebra, Affication of Boolean Functions.	Alge	braic	Mani	pulation of Boolean
Unit 4 I	Propos	itional Logic				8 Hours
<b>Proposition</b> formed form	n <b>al Log</b> nula, Tru	ic: Introduction, Propositions and Compound Statements ath Tables, Tautology, Satisfiability, Contradiction, Algebra	s, Ba of Pi	isic I ropos	ogica ition,	l Operations, Well- Theory of Inference.
Predicate I Predicate Lo	L <b>ogic:</b> ogic.	First order predicate, Well-formed formula of Predicate	, Qu	antif	ers, I	nference Theory of
Unit 5	<b>Free a</b>	nd Graph				8 Hours
Trees: Intro	oduction	to trees, application of trees.				
<b>Graphs:</b> D Isomorphism	Definitio n and H	n and terminology, Representation of Graphs, Variou omeomorphism of Graphs, Planar Graphs, Euler and Hami	s tyj ltonia	pes an Pa	of Gra ths, G	aphs, Connectivity, raph Coloring

<b>Course outcome:</b> After completion of this course students will be able to:						
Unit 1	Apply the basic principles of sets, relations & functions and mathematical induction in computer science & engineering related problems.	К3				
Unit 2	Understand the algebraic structures and its properties to solve complex problems.	K2				
Unit 3	Describe lattices and its types and apply Boolean algebra to simplify digital circuit.	K2, K3				
Unit 4	Infer the validity of statements and construct proofs using predicate logic formulas.	K3, K5				
Unit 5	Design and use the non-linear data structure like tree and graphs to solve real world problems.	K3, K6

	<b>B. TECH. SECOND YEAR</b>					
Course Code	ACSAI0302	L	Т	P	Credit	
<b>Course Title</b>	Logic Design and Computer Architecture	3	0	0	3	
Course object design of arithme system, commun	<b>Course objective:</b> To understand the types of organizations, structures, and functions of computers, design of arithmetic and logic units, and float point arithmetic. To understand the concepts of the memory system, communication with I/O devices, and interfaces.					
Pre-requisites	:					
•	Basic knowledge of computer systems.					
•	Logic gates and their operations.					
	<b>Course Contents / Syllabus</b>					
UNIT-I I	ntroduction				8 Hours	
<b>Basics of Logic</b> Subtractor and Fu	<b>Design:</b> Basic of number System, Boolean algebra, Half A all Subtractor, Multiplexer, Encoder, Decoder.	dder a	nd ]	Full A	Adder, Half	
<b>Computer Orga</b> buses, bus archite Process or organi	<b>nization and Architecture</b> , Functional units of a digital system ecture, types of buses, and bus arbitration and its types. Register zation, general registers organization, stack organization, and a	and th bus, a ddress	neir i and 1 sing	nterc nemc mode	onnections, ory transfer. es.	
UNIT-II	ALU Unit				8 Hours	
Arithmetic and Booth's algorithm Arithmetic &logi	<b>logic unit</b> : Lookahead carries adders. Multiplication: Signan, and array multiplier. Division and logic operations. Floating c unit design. IEEE Standard for Floating-Point Numbers.	ed ope point	eran arith	d mu imetio	ltiplication, c operation,	
UNIT-III	Control Unit				8 Hours	
<b>Control Unit:</b> In operations, execution Complex Instruction horizontal and version of the second se	struction types, formats, instruction cycles and sub-cycles (fetc ation of a complete instruction. Program Control, Reduced tion Set Computer, Pipelining. Hardwire and microprogram artical microprogramming, Flynn's classification.	h and Instru 1med	exec ction con	ute, e 1 Set trol, 1	tc.), micro- Computer, Concept of	
UNIT-IV	Memory Unit				8 Hours	
Memory:Basic c ROM memories. replacement Aux implementation,	oncept and hierarchy, semiconductor RAM memories, 2D & 2 Cache memories: concept and design issues & performa iliary memories: magnetic disk, magnetic tape, and optical disk Memory Latency, Memory Bandwidth, Memory Seek Time.	/2D m nce ao s Virt	neme Idre ual r	ory on ss ma nemo	ganization. apping and ry: concept	
UNIT-V	Input/Output				8 Hours	
Peripheral devic exceptions. Mode I/O channels and	Peripheral devices, I/O interface, I/O ports, Interrupts: interrupt hardware, types of interrupts and exceptions. Modes of Data Transfer: Programmed I/O, interrupt initiated I/O and Direct Memory Access, I/O channels and processors. Serial Communication: Synchronous & asynchronous communication.					
Course outco	<b>ne:</b> After completion of this course students will be able to:					
CO 1 Under	stand the basic structure and operation of a digital computer sy	vstem.			K2	

CO 2	Analyze the design of arithmetic & logic unit and understand the fixed point and floating-point arithmetic operations.	K4				
CO 3	CO 3 Implement control unit techniques and the concept of Pipelining					
CO 4	Understand the hierarchical memory system, cache memories and virtual memory.	K2				
CO 5	CO 5 Understand different ways of communicating with I/O devices and standard I/O interfaces.

	B. TECH. SECOND YEAR					
<b>Course Code</b>	ACSE0302 L T P	Credit				
<b>Course Title</b>	Object Oriented Techniques using Java 3 0 0	3				
Course object	tive:					
The objective of this course is to understand the object-oriented methodology and its techniques to design and develop conceptual models and demonstrate the standard concepts of object-oriented techniques modularity, I/O. and other standard language constructs. The basic objective of this course is to understand the fundamental concepts of object-oriented programming in Java language and also implement the Multithreading concepts, GUI based application and collection framework.						
Pre-requisites	3:					
<ul><li>Student r</li><li>line shell</li><li>Knowled</li></ul>	<ul> <li>Student must know at least the basics of how to use a computer, and should be able to start a command line shell.</li> <li>Knowledge of basic programming concents, as covered in 'Programming Pagic'' course is processary.</li> </ul>					
Course Contents / Syllabus						
UNIT-I Introduction						
<b>Object Orientee</b> Inheritance.	<b>1 Programming</b> : Introduction and Features: Abstraction, Encapsulation, Poly	ymorphism, and				
Modeling Conc	epts: Introduction, Class Diagram and Object Diagram.					
<b>Control Statem</b> Line Argument.	ents: Decision Making, Looping and Branching, Argument Passing Mechar	iism: Command				
UNIT-II	Basics of Java Programming	8 Hours				
Class and Object of "this" and "su	et: Object Reference, Constructor, Abstract Class, Interface and its uses, Defining per" keyword, Garbage Collection and finalize () Method.	ng Methods, Use				
Inheritance: Introduction and Types of Inheritance in Java, Constructors in Inheritance.						
Polymorphism: Introduction and Types, Overloading and Overriding.						
Lambda expression: Introduction and Working with Lambda Variables.						
Arrays: Introduction and its Types.						
UNIT-III	Packages, Exception Handling and String Handling	8 Hours				

Packages: Introduction and Types, Access Protection in Packages, Import and Execution of Packages.

**Exception Handling, Assertions and Localizations:** Introduction and Types, Exceptions vs. Errors, Handling of Exception. Finally, Throws and Throw keyword, Multiple Catch Block, Nested Try and Finally Block, Tokenizer. Assertions and Localizations Concepts and its working.

**String Handling:** Introduction and Types, Operations, Immutable String, Method of String class, String Buffer and String Builder class.

UNIT-IV	Concurrency in Java and I/O Stream	8 Hours

**Threads**: Introduction and Types, Creating Threads, Thread Life-Cycle, Thread Priorities, Daemon Thread, Runnable Class, Synchronizing Threads.

I/O Stream: Introduction and Types, Common I/O Stream Operations, Interaction with I/O Streams Classes.

Annotations: Introduction, Custom Annotations and Applying Annotations.

UNIT-V	<b>GUI Programming, Generics and Collections</b>	8 Hours
--------	--	---------

**GUI Programming:** Introduction and Types, Swing, AWT, Components and Containers, Layout Managers and User-Defined Layout and Event Handling.

**Generics and Collections:** Introduction, Using Method References, Using Wrapper Class, Using Lists, Sets, Maps and Queues, Working with Generics.

**Course outcome:** After completion of this course students will be able to:

CO1	Identify the concepts of object-oriented programming and relationships among them needed in modeling.	K2
CO2	Demonstrate the Java programs using OOP principles and also implement the concepts of lambda expressions.	К3
CO3	Implement packages with different protection level resolving namespace collision and evaluate the error handling concepts for uninterrupted execution of Java program.	K3, K5
CO4	Implement Concurrency control, I/O Streams and Annotations concepts by using Java program.	К3
CO5	Design and develop the GUI based application, Generics and Collections in Java programming language to solve the real-world problem.	K6

B. TECH. SECOND YEAR						
Course Co	de	ACSE0301	LT	Р	Credits	
<b>Course Tit</b>	Course TitleData Structures3 1 04					
<b>Course objective:</b> Learn the basic concepts of algorithm analysis, along with implementation of linear and non-linear data structures, hashing and file structures.						
<b>Pre-requis</b> statements, S	<b>ites:</b> witch-	Basics of C/Python programming, Identifiers, Cor- case statements, Iterative statements, Functions, S	nstants, Ope tructures.	erators, (	Conditional	
Course Co	ntent	ts / Syllabus				
UNIT-I	UNIT-I Introduction to data structure, Arrays, Searching and Sorting 8 Hour					
Data types: Primitive and non-primitive, Types of Data Structures- Linear & Non-Linear Data Structures. Time and Space Complexity of an algorithm, Asymptotic notations (Big Oh, Big Theta and Big Omega), Abstract Data Types (ADT).						
Arrays: Defin and Column I of Arrays, Sp	iition, Major arse N	Single and Multidimensional Arrays, Representation Order, Derivation of Index Formulae for 1-D,2-D, Matrices and their Representations.	on of Arrays 3-D and n-I	s: Row N D Array	Major Order, Application	

Searching: Linear search, Binary search. Sorting: Bubble sort, Insertion sort, Selection sort, Radix Sort, Merge sort, Quick sort.

#### UNIT-II Linked lists

Linked lists: Advantages of linked list over array, Self-referential structure, Singly Linked List, Doubly Linked List, Circular Linked List,

Operations on a Linked List: Insertion, Deletion, Traversal, Reversal, Searching, Polynomial Representation and Addition of Polynomials

#### UNIT-III Stacks and Queues

**Stacks:** Primitive Stack operations: Push & Pop, Array and Linked List Implementation of Stack, Application of stack: Infix, Prefix, Postfix Expressions and their mutual conversion, Evaluation of postfix expression.

**Recursion:** Principles of recursion, Tail recursion, Removal of recursion, Problem solving using iteration and recursion with examples such as binary search, Fibonacci series, and Tower of Hanoi, Trade-offs between iteration and recursion.

**Queues:** Array and linked List implementation of queues, Operations on Queue: Create, Insert, Delete, Full and Empty, Circular queues, Dequeue and Priority Queue.

#### UNIT-IV Trees

#### 8 Hours

Basic terminology used with Tree, Binary Trees, Binary Tree Representation: Array Representation and Pointer (Linked List) Representation, Binary Search Tree, Strictly Binary Tree, Complete Binary Tree, An Extended Binary Trees.

**Tree Traversal algorithms**: In-order, Pre-order and Post-order. Constructing Binary Tree from given Tree Traversal, Operation of Insertion, Deletion, Searching & Modification of data in Binary Search tree, Binary Heaps, Heap sort, Threaded Binary trees, Traversing Threaded Binary trees, AVL Tree, B-Tree.

#### **UNIT-V** Graphs and File Structure

Graphs: Terminology used with Graph, Data Structure for Graph Representations: Adjacency matrices, Adjacency List.

**Graph Traversal:** Depth First Search and Breadth First Search. Connected Component, Spanning Trees, Minimum Cost Spanning Trees: Prim' s and Kruskal's algorithm. Transitive Closure and Shortest Path algorithms: Dijkstra Algorithm.

**File Structure:** Concepts of files, records and files, Sequential, Indexed and Random File Organization, indexing structure for index files, Hashing: The symbol table, Hashing Functions, Collision-Resolution Techniques, hashing for direct files, multi-Key file organization and Access Methods.

**Course outcome:** After completion of this course students will be able to:

8 Hours

8 Hours

CO 1	Describe the need of data structure and algorithms in problem solving and analyze Time space trade-off. K2, K4					
CO 2	Describe how arrays are represented in memory and how to use them for implementation of matrix operations, searching and sorting along with their computational efficiency.					
CO 3	Compare and contrast the advantages and disadvantages of linked lists over arrays and implement operations on different types of linked list. K4, K6					
CO 4	Design, implement and evaluate the real-world applications using stacks, queues and non-linear data structures. K5, K6					
CO 5	Identify and develop the alternative implementations of data structures with respect to its performance to solve a real-world problem.K1, K3, K5, K6

<b>B. TECH. SECOND YEAR</b>					
Course Code	ACSDS0301N	LTP	Credits		
Course Title	Foundations of Data Science	3 0 0	3		

### **Course objective:**

The objective of this course is to understand the fundamental concepts of Data Science, learn about various types of data formats and its manipulations. It helps students to learn exploratory data analysis and visualization techniques in addition to R programming language.

**Pre-requisites:** Basic Knowledge of Statistics and Probability.

### **Course Contents / Syllabus**

#### UNIT-I

#### **Introduction To Data Science**

What is Data Science, Big Data, the 5 V's, Evolution of Data Science, Datafication, Skill sets needed, Data Science Lifecycle, types of Data Analysis, Data Science Tools and technologies, Need for Data Science, Analysis Vs Analytics Vs Reporting, Big Data Ecosystem, Future of Data Science, Applications of Data Science in various fields, Crowd sourcing analytics, Data Security Issues, Use cases of Data science-Facebook, Netflix, Amazon, Uber, AirBnB.

#### UNIT-II Data Handling

**Types of Data:** structured, semi-structured, unstructured data, Numeric, Categorical, Graphical, High Dimensional Data, Transactional Data, Spatial Data, Social Network Data, standard datasets, Data Classification, Sources of Data, Data manipulation in various formats, for example, CSV file, pdf file, XML file, HTML file, text file, JSON, image files etc. import and export data in R/Python. Data Mining & Data Warehousing (Overview, Motivation, Definition & Functionalities), KDD Process in data mining.

UNIT-III	Data Mining & Warehousing	8 Hours
<b>Data Pre-process</b>	ing: Form of Data Pre-processing, why pre-process the data Attribute and its types	š,
understanding and	extracting useful variables, KDD process, Data Cleaning: Missing Values, Noisy	Data,
(Dimmin a Classica)	na Desmanian) Inconsistant Data Data Internation and Transformation Data Data	1

(Binning, Clustering, Regression), Inconsistent Data, Data Integration and Transformation. Data Reduction: Data Cube Aggregation, Dimensionality reduction, Data Compression, Numerosity Reduction, Discretization and Concept hierarchy generation.

**Data Warehouse Process and Technology:** Overview, Definition, Data Warehousing Components, building a Data Warehouse, Difference between Database System and Data Warehouse, Multi-Dimensional Data Model, Data Cubes, Stars, Snowflakes, Fact Constellations, Warehousing Strategy, Warehouse /management and Support Processes, Warehouse Schema Design. Aggregation, Query Facility, OLAP function and Tools. OLAP Servers, ROLAP, MOLAP, HOLAP.

#### UNIT-IV Exploratory Data Analysis

8 Hours

**8** Hours

8 Hours

(Using R Packages) Handling Missing data, Data Cleaning, Removing Redundant variables, variable Selection, identifying outliers, Removing Outliers, Time series Analysis, Data transformation and dimensionality reduction techniques such as Principal Component Analysis (PCA), Factor Analysis (FA) and Linear Discriminant Analysis (LDA), Univariate and Multivariate Exploratory Data Analysis. Data Munging, Data Wrangling- APIs and other tools for scrapping data from the web/ internet using R/Python, Messy Data.

tools for scrapping data from the web/ internet using R/Python, Messy Data.8 HoursUNIT-VData Visualization8 HoursNeed for data visualization, Visualization packages, Data visualization standard tools: Bar plot, Plotting<br/>categorical data, Stacked bar plot, Histogram, plot() function and line plot, pie chart / 3D pie chart, Scatter plot,<br/>Box plot; Advanced data visualization Types: Heat Map, Mosaic Map, Map Visualization, 3D Graphs,<br/>Correlogram, Q-Q plots, Visualization of Geospatial Data, Mapping Component: x and y-variable, Scale<br/>Component: linear scale, log scale; Embellishing Component - axes labels, titles, legends, font size, Colour,<br/>Introduction to Data visualization libraries including Python's Matplotlib and Seaborn Packages and R's ggplot2<br/>package.

Course o	utcome: After completion of this course students will be able to:				
CO 1	Understand and apply the fundamental concepts of data science in the areas that plays major role within the realm of data science.	K3			
CO 2	Explain and exemplify the most common forms of data and its representations.	K2			
CO 3	Apply data pre-processing techniques using R.	K3			
CO4	Analyse data using exploratory data analysis.	K4			
CO 5	Illustrate various visualization methods for different types of data sets and application scenarios.	К3

No.			(Cod	etantra)	
1.	Write a s	imple program in Java.		1	CO1
2.	Write a J	ava program to display default values of all primitive data types		2	CO1
3.	Write a J	ava program to understand Command line arguments.		3	CO1
4.	Write a J	ava program to understand if-then-else statement		5	CO1
5.	Write a J	ava Program to find the Factorial of a given number		6	CO1
6.	Write a J or not	ava Program to check whether the given number is Palindrome		7	CO1
7.	Write a J	AVA program to display Fibonacci series.		8	CO1
8.	Write a J methods	AVA program to implement class mechanism. Create a class, and invoke them inside main method.		-	CO2
9.	Write a J	ava program to illustrate the abstract class concept	2	4	CO2
10.	Write a keyword	Java program to Access the instance variables by using this	2	7	CO2
11.	Write a J	ava class to show the concept of static class	2	6	CO2
12.	Write a J	ava program to Access the Class members using super Keyword	2	0	CO2
13.	Write a J	AVA program to implement Single Inheritance.		-	CO2
14.	Write a J	AVA program to implement multi-level inheritance.	1	9	CO2
15.	Write a J	ava program to implement Interface	2	2	CO2
16.	Write a overloadi	JAVA program to implement constructor and constructor ing.	1	8	CO2
17.	Write a overridin	JAVA program implement method overloading and method g.		-	CO2
18.	Write a J using lan	AVA program to implement a user defined functional interface nbda expressions.		-	CO2

19.	Write a program prints a multidimensional array of integers.	9	CO2
20.	Write a JAVA program to show the multiplication of two matrices using arrays.	11	CO2
21.	Write a Java program to Search an element using Linear Search	13	CO2
22.	Write a Java program to Search an element using Binary Search	14	CO2
23.	Write a Java Program to Sort elements using Insertion Sort	15	CO2
24.	Write a Java Program to Sort elements using Selection Sort - Largest element method	16	CO2
25.	Write a Java program to Sort elements using Bubble Sort	17	CO2
26.	Write a Java program to handle an Arithmetic Exception - divided by zero	33	CO3
27.	Write a program to implement user defined exception in java.	-	CO3
28.	Write a Java program to illustrate Finally block	34	CO3
29.	Write a Java program to illustrate Multiple catch blocks	35	CO3
30.	Write a Java program for creation of illustrating throw	36	CO3
31.	To implement the concept of assertions in JAVA programming language.	-	CO3
32.	To implement the concept of localization in JAVA programming language.	-	CO3
33.	Write a Java program to print the output by appending all the capital letters in the input in a string.	30	CO3
34.	Write a JAVA program to show the usage of string builder.	31	CO3
35.	Write a JAVA program to show the usage of string buffer.	32	CO3
36.	Write a JAVA program to implement even and odd thread by using Thread class and Runnable interface.	-	CO4
37.	Write a JAVA program to synchronize the threads by using Synchronize statements and Synchronize block	-	CO4
38.	To demonstrate the concept of type annotations in JAVA programming language.	-	CO4

39.	To demonstrate the concept of user defined annotations in JAVA programming language.	-	CO5
40.	Write a JAVA program to implement the concept of Generic and Collection classes.	-	CO5
Lab C	ourse Outcome: After completion of this course students will be able to		
CO1	To understand how to design and implement basic data types, command lin control statements	e arguments and	K2
CO2	To demonstrate the Java programs using OOP principles and also implem of lambda expressions and arrays.	ent the concepts	К3
CO3	To demonstrate, understand and use of different exceptional handling assertions, localizations and string handling.	ng mechanisms,	K3
CO4	To solve the real time problems using multithreading and annotations conc	cept.	K3
CO5	To design and develop collections and generic classes in JAVA programm	ing language	K6

20	Program t	to implement Qu	eue Using linked list	,					CO3
21	Program t	o implement Ci	rcular Queue Using li	inked list					CO3
22	Program t	o implement Pr	iority Queue Using lin	nked list					CO3

23	Program to implement Stack Operation using Linked list	CO3
24	Program to convert infix to postfix expression.	CO3
25	Program to evaluate postfix expression	CO3
26	Program to compute factorial using tail recursion	CO3
27	Program to implement Tower of Hanoi	CO3
28	Program implementing Addition of two polynomials via Linked Lists	CO2
29	Program to implement binary tree using linked lista. Insertionb. Deletionc. Traversald. Searching	CO5
30	Program to implement binary search tree using linked lista. Insertionb. Deletionc. Traversald. Searching	CO5
31	Program to implement Heap sort in a non-recursive way	CO5
32	Program to implement Radix sort.	CO4
33	Program to implement BFS algorithm	CO5
34	Program to implement DFS algorithm	CO5
35	Program to implement the minimum cost spanning tree	CO5
36	Program to implement the shortest path algorithm	CO5
Lab Co	<b>ourse Outcome:</b> After completion of this course students will be able to	
CO 1	Implement operations on single and multi-dimensional array.	K3
CO 2	Implement various linear data structures like single Linked-list, doubly Linked-list, Circular linked-list.	K3, K6
CO 3	Implement Stack and Queue using array and linked list.	K3
CO 4	Analyze and Implement sorting and searching algorithms.	K4, K6
CO5	Solve complex problems using non-linear data structures like tree and graph.	K6

<b>Course Code</b>	ACSDS0351	LT P	Credit	
<b>Course Title</b>	Data Analysis Lab	0 0 2	1	
List of Experin	nents:			
Sr. No.	Name of Experiment		CO	
1	Write a R program to create a Dataframes which contain details employees and display the details.	of 5	CO1	
2	Write a R program to get the first 10 Fibonacci numbers.		CO1	
3	Write a R program to get all prime numbers up to a given number	r.	CO1	
4	Write a R program to find the maximum and the minimum value vector.	of a given	CO1	
5	Create an array, passing in a vector of values and a vector of dim provide names for each dimension.	iensions, also	CO1	
6	Write a R program to create a list containing a vector, a matrix a give names to the elements in the list. Access the first and second the list.	nd a list and d element of	CO1	
7	Write a R program to create a list containing a vector, a matrix a add element at the end of the list.	nd a list and	CO1	
8	<ul> <li>Read the following file formats in Python/R:</li> <li>Comma-separated values</li> <li>XLSX</li> <li>ZIP</li> <li>Plain Text (txt)</li> <li>JSON</li> <li>XML</li> <li>HTML</li> <li>Images</li> <li>Hierarchical Data Format</li> <li>PDF</li> <li>DOCX</li> <li>MP3</li> </ul>		CO3	
9	<ul> <li>Load the Iris dataset as a list of lists</li> <li>Compute and print the mean and the standard deviation 4 measurement columns (i.e., sepal length and width, powidth</li> <li>Compute and print the mean and the standard deviation for measurement columns, separately for each of the three Iris species</li> </ul>	for each of the etal length and each of the 4 es.	CO2	

10	a. Find the data distributions using box and scatter plot.	CO5
	b. Find the outliers using box plot	
	c. Plot the histogram, bar chart and pie chart on sample data	
	d. Plot Pie Chart, Histogram (3D) [including colourful ones]	
11	Import a sample dataset and perform Regression techniques to find out relation between variables.	CO2
12	<ul> <li>Find the correlation matrix.</li> <li>a. Plot the correlation plot on dataset and visualize giving an overview of relationships among variables on data set.</li> <li>b. Analysis of covariance: variance (ANOVA)if data have categorical variables on data set.</li> </ul>	CO2
13	Write a program to create 3D plot, to add title, change viewing direction, add color and shade to the plot.	CO5
14	<ul><li>a. Create a data frame from the sample data set.</li><li>b. Create a table with the needed variables</li><li>c. Perform the Chi-Square test.</li></ul>	CO2
15	Perform complete steps of exploratory data analysis on standard data sets (iris flowers, Wine Quality Dataset etc.)	CO4
Lab Course Ou	tcome: After completion of this course students will be able to	
CO 1	Develop basic R programs.	K3
CO 2	Implement statistical techniques on variety of data.	K3
CO 3	Explore different types of data and file formats.	K2
CO 4	Perform exploratory data analysis on different data types.	K3
CO 5	Apply visualization techniques on various data sets.	К3

ecosystems. Biogeochemical Cycles: Importance, gaseous and sedimentary cycles. Carbon, Nitrogen, Phos Sulphur Cycles. Basic concepts of sustainable development. SDGs. Ecosystem services. UN Decade for Ecorestoration.	Food chains and food webs. Ecological pyramids, Energy flow in ecological systems, Characteristics of different ecosystems. Biogeochemical Cycles: Importance, gaseous and sedimentary cycles. Carbon, Nitrogen, Phosphorus and Sulphur Cycles.				
UNIT-II Natural Resources and Associated Problems 8 Hours					
Natural resources and associated problems. Forest resources: Use and over-exploitation, deforestation. Timber extrac dams and their effects on forest and tribal people. Mineral resources: Use and exploitation, environmental effects of ex- using mineral resources. Food resources: World food problems, changes caused by agriculture and over-grazing, effec agriculture, fertilizer-pesticide problems, water logging, salinity. Land resources: Land as a resource, land degradation, man induced landslides. Equitable use of resources for sustainable Non-Renewable Energy Resources: Fossil fuels and their reserves, Nuclear energy, types, uses and effects, Renew Resources: hydropower, Solar energy, geothermal, tidal and wind energy, Biomass energy, biogas and its advantages.	ction, mining, extracting and cts of modern le lifestyles. wable Energy				
UNIT-III Biodiversity Succession and Non-Renewable Energy Resources	8 Hours				
Biodiversity and their importance, Threats to biodiversity, major causes, extinction's, vulnerability of extinction, IUCN threat categories, Red data book.Strategies for biodiversity conservation, principles of biodiversity conservation in-situ and ex-situ conservation Mega diversity zones and Hot spots, concepts, distribution and importance. Succession: Concepts of succession, Types of Succession. Trends in succession. Climax and stability.UNIT-IVPollution and Solid Waste Management	f species to on strategies 8 Hours				
Air pollution: sources of air pollution, Primary and secondary air pollutants. Origin and effects of SOX, NOX, Hydrocarbon, control of air pollution. Water pollution: sources and types of water pollution, Effects of water Eutrophication, Soil pollution: Causes of soil pollution, Effects of soil pollution, Major sources of and effe pollution on health, Radioactive and thermal pollution sources and their effects on surrounding environment.	K, Cox, CFC, ter pollution, ects of noise				
Solid waste disposal and its effects on surrounding environment, Climate change, global warming, acid rain, ozone layer					
UNIT-VRole of Community and Environmental Protection Acts8	, ozone layer				

Role of community, women and NGOs in environmental protection, Bioindicators and their role, Natural hazards, Chemical accidents and disasters risk management, Environmental Impact Assessment (EIA), Salient features of following Acts: a. Environmental Protection Act, 1986, Wildlife (Protection) Act, 1972.b. Water (Prevention and control of pollution) Act, 1974.c. Air (Prevention and control of pollution) Act, 1981. Forest (Conservation) Act, 1980.d. Wetlands (Conservation and Management) Rules, 2017; e. Chemical safety and Disaster Management law. F. District Environmental Action Plan. Climate action plans.

**Course outcome:** After completion of this course students will be able to

CO 1 Understand the basic principles of ecology and environment. Ecosystem: Basic concepts, components of K2 ecosystem., food chains and food webs. Ecological pyramids CO 2 Understand the different types of natural recourses like food, forest, minerals and energy and their K2 conservation CO 3 Understand the importance of biodiversity, Threats of biodiversity and different methods of biodiversity K2 conservation. CO<sub>4</sub> Understand the different types of pollution, pollutants, their sources, effects and their control methods K3 CO 5 Understand the basic concepts of sustainable development, Environmental Impact Assessment (EIA) and K3 different acts related to environment

CO 1	Comprehend the fundamental principles of technical communication with	K2
	special reference to reading.	
CO 2	Write various kinds of professional correspondence.	K5
CO 3	Recognise and produce different kinds of technical documents.	K2
CO 4	Apply effective speaking skills to communicate at the workplace.	K3
CO 5	Demonstrate their understanding of various ethical concerns in written communication.	К3

#### **Textbook:**

1. Technical Communication – Principles and Practices by Meenakshi Raman & Sangeeta Sharma, Oxford Univ. Press, 2016, New Delhi.

#### **Reference Books:**

1. Personality Development and Soft Skills by Barun K Mitra, Oxford Univ. Press, 2012, New Delhi.

2. Spoken English- A Manual of Speech and Phonetics by R K Bansal & J B Harrison, Orient Blackswan, 2013, New Delhi.

3. Business Correspondence and Report Writing by Prof. R C Sharma & Krishna Mohan, Tata McGraw Hill & Co. Ltd., 2001, New Delhi.

4. Practical Communication: Process and Practice by L U B Pandey; A.I.T.B.S. Publications India Ltd.; Krishan Nagar, 2014, Delhi.

5. Modern Technical Writing by Sherman, Theodore A (et.al); Apprentice Hall; New Jersey; USA.

6. A Textbook of Scientific and Technical Writing by S D Sharma; Vikas Publication, Delhi.

7. Skills for Effective Business Communication by Michael Murphy, Harvard University, USA.

8. A Complete Guide to Write Right by Agarwal, Deepa. Scholastic, 1<sup>st</sup> edition.

9. Technical writing and communication, R S Sharma, V.P. Publication, 1<sup>st</sup> edition.

10. Business Communication for Managers by Payal Mehra, Pearson Publication, Delhi.

	B. TECH. SECOND YEAR		
Course Code ACSE	0403A	L T P	Credits
Course Title Oper	ating Systems	300	3

#### **Course objective:**

The objective of the course is to provide an understanding of the basic modules and architecture of an operating system and the functions of the modules to manage, coordinate and control all the parts of the computer system. This course cover processor scheduling, deadlocks, memory management, process synchronization, system call and file system management.

**Pre-requisites:**Basic knowledge of computer fundamentals, Data structure and Computer organization.

#### **Course Contents / Syllabus**

#### UNIT-I Fundamental Concepts of Operating System

8 Hours

Introduction, Functions of Operating System, Characteristics of Operating System, Computer System Structure, Evolution of Operating Systems-Bare Machine, Single Processing, Batch Processing,Multiprogramming,Multitasking,Multithreaded,Interactive, Time sharing, Real Time System, Distributed System, Multiprocessor Systems, Multithreaded Systems, System Calls, System Programs and System Boot, Interrupt Handling, Operating System Structure- Simple structure, Layered Structure, Monolithic, Microkernel and Hybrid, System Components, Operating System Services, Case Studies: Windows, Unix and Linux.

#### UNIT-II Process Management

Scheduling Concepts, Performance Criteria, Process States, Process Transition Diagram, Schedulers, Process Control Block (PCB), Process Address Space, Process Identification Information, Threads and their management, Types of Scheduling: Long Term Scheduling, Mid Term Scheduling, Short Term Scheduling, Pre-emptive and Non Pre-emptive Scheduling, Dispatcher, Scheduling Algorithm: FCFS, Non Pre-emptive SJF, Pre-emptive SJF, Non Pre-emptive Priority, Pre-emptive Priority, Round Robin, Multilevel Queue Scheduling and Multilevel Feedback Queue Scheduling.

UNIT-III Deadlock and Concurrent Processing

Deadlock: System model, Deadlock characterization, Prevention, Avoidance and detection, Recovery from Deadlock, Principle of Concurrency, Process Synchronization, Producer / Consumer Problem, Mutual Exclusion, Critical Section Problem, Peterson's Solution, Lamport Bakery Solution, Semaphores, Test and Set Operation; Critical Section Problems and their solutions - Bound Buffer Problem, Reader-Writer Problem, Dining Philosopher Problem, Sleeping Barber Problem; Inter Process Communication Models and Schemes, Process Generation.

## UNIT-IV Memory Management

Memory Management function, Address Binding Loading : Compile Time, Load Time and Execution Time, MMU, Types of Linking, Types of Loading, Swapping, Multiprogramming with Fixed Partitions, Multiprogramming with variable partitions, Memory Allocation: Allocation Strategies First Fit, Best Fit, and Worst Fit, Paging, Segmentation, Paged Segmentation, Virtual Memory Concepts, Demand Paging, Performance of Demand Paging, Page Replacement Algorithms: FIFO,LRU, Optimal and LFU, Belady's Anomaly, Thrashing, Cache Memory Organization, Locality of Reference.

UNIT-V I/O Management and Disk Scheduling	8 Hours
---	---------

# 8 Hours

8 Hours

8 Hours

I/O Devices, and I/O Subsystems, I/O Buffering, I/O Ports, Disk Storage: Seek Time, Rotational Latency, Data Transfer Time, Average Access Time and Controller Time, Disk Storage Strategies, Disk Scheduling:FCFS, SSTF, SCAN, C-SCAN, LOOK and C-LOOK. Directory and Directory Structure, File System: File concept, File Access Mechanism: - Sequential Access, Direct Access and Index Access methods, File Allocation Method: Contiguous, Linked and Indexed, Free Space Management: -Bit Vector, Linked List, Grouping and Counting File System Implementation Issues, File System Protection and Security, RAID.

**Course outcome:** After completion of this course students will be able to:

CO 1	Understand the fundamentals of an operating systems, functions and their structure and functions.	K1, K2
CO 2	Implement concept of process management policies, CPU Scheduling and thread management.	K5
CO 3	Understand and implement the requirement of process synchronization and apply deadlock handling algorithms.	K2, K5
CO 4	Evaluate the memory management and its allocation policies.	K5
CO 5	Understand and analyze the I/O management and File systems	K2, K4

#### **Text books:**

1) Operating System Concepts Essentials. Abraham Silberschatz, Peter Baer Galvin and Greg Gagne.

#### **Reference Books:**

1) Operating Systems: Internals and Design Principles. William Stallings.

2) Operating System: A Design-oriented Approach. Charles Patrick Crowley.

3) Operating Systems: A Modern Perspective. Gary J. Nutt.

4) Design of the Unix Operating Systems. Maurice J. Bach.

5) Understanding the Linux Kernel, Daniel Pierre Bovet, Marco Cesati.

<b>B. TECH. SECOND YEAR</b>			
Course Code	ACSAI0402	LTP	Credit
<b>Course Title</b>	Database Management Systems	3 1 0	4
Course objective The objective of the how to organize, m Database. Pre-requisites:	e: e course is to present an introduction to database management systems aintain and retrieve - efficiently, and effectively - information in relation The student should have basic knowledge of discrete mathematics and	, with an en ional and n data struct	mphasis on on-relation ures.
	Course Contents / Syllabus		
UNIT-I II	ntroduction		8 Hours
Overview, Databas schema and instanc Data Modeling usin constraints, keys, C of an ER diagrams	e system Vs File system, Database system concepts, architecture and s es, Data independence and Database language and Interfaces, DDL, D ng the Entity Relationship Model: ER model concepts, notation for I concepts of Super Key, Candidate key, Primary key, Generalization, Ag to tables, Extended ER model, Relationship of higher degree.	structures, ML. ER diagran ggregation,	data model n, mapping Reduction
UNIT-II R	Relational Data Model and Language		8 Hours
Introduction on SQL: Characteristics of SQL, advantage of SQL. SQL data type and literals. Types of SQL commands. SQL operators and their procedure. Tables, Views and indexes. Queries and sub queries. Aggregate functions. Insert, Update and Delete operations, Joins, Unions, Intersection, Minus, Cursors, Triggers, Procedures in SQL/PL SQL.			
UNIT-III D	atabase Design-Normalization		8 Hours
Normalization, Normal Form (NF), Functional Dependencies (FD), Closure of an attribute set and FD sets, Canonical Cover of FD Sets, Normal Forms based on Functional Dependencies (1 NF, 2 NF, 3 NF, BCNF), Multivalued Dependencies (MVDs) and 4NF, Join Dependencies (JDs) and 5NF and Domain Key Normal Formal (DKNF or 6NF), Inclusion Dependencies, Loss-Less Join Decompositions.			
UNIT-IV T	ransaction Processing and Recovery Concept		8 Hours
Transaction system, Testing of serializability, Serializability of schedules, Conflict & View serializable schedule, Recoverability, Recovery from transaction failures, Log based recovery, Checkpoints, Deadlock handling. Control Concurrency Techniques: Concurrency Control, Locking Techniques for concurrency control, Time stamping protocols for concurrency control, Validation-based protocol, Multiple granularities, Multi version schemes, Recovery with concurrent transaction, Case study of Oracle.			
Distributed Databas	se: -Introduction Distributed Database, Centralized and Distributed Sys ntroduction No-SQL with cloud Database	tem Databa	ase System. 8 Hours

Definition of NoSQL, History of NoSQL and Different NoSQL products, Exploring Mongo DB, Interfacing and Interacting with NoSQL, NoSQL Storage Architecture, CRUD operations with MongoDB, Querying, Modifying and Managing NoSQL Data stores, Indexing and ordering datasets(MongoDB).

Cloud database: - Introduction of Cloud database, NoSQL with Cloud Database, Introduction to Real time Database.

<b>Course outcome:</b> After completion of this course students will be able to:			
CO 1	Analyze database used to solve real world and complex problem and design the	K4	
	ER, EER Model.		
CO 2	Analyze and apply Structured Query Language (SQL) or Procedural Query	K4, K3	
	Language (PL/SQL) to solve the complex queries. Implement relational model,		
	integrity constraints.		
CO 3	Design and implement database for storing, managing data efficiently by applying	K6	
	the Normalization process on the database.		
CO 4	Synthesize the concepts of transaction management, concurrency control and	K5	
	recovery.		
CO 5	Understand and implement the concepts of NoSQL with cloud database.	K2, K5	

#### Text books:

1) Korth, Silbertz, Sudarshan," Database System Concepts", Seventh Edition, McGraw - Hill.

2) Elmasri, Navathe, "Fundamentals of Database Systems", Seventh Edition, Addision Wesley.

3) Ivan Bayross "SQL,PL/SQL The programming language Oracle, Forth Edition, BPB Publication.

#### **Reference Books:**

1) Thomas Cannolly and Carolyn Begg, "Database Systems: A Practical Approach to Design, Implementation and Management", Third Edition, Pearson Education, 2007.

2) Raghu Ramakrishan and Johannes Gehrke "Database Management Systems" Third Edition, McGraw-Hill.

3) NoSQL and SQL Data Modeling: Bringing Together Data, Semantics, and Software First Edition by Ted Hills.

4) Brad Dayley "NoSQL with MongoDB in 24 Hours" First Edition, Sams Publisher.

B. TECH.SECONDYEAR					
Course Code	ACSE0453A	LT P	Credits		
Course Title	Operating Systems Lab	0 0 2	1		
List of Experim	ents:				
Sr. No.	Name of Experiment	С	0		
1. Linux based Commands	<ul> <li>Lab1: Execute Various types of Linux Commands (Miscellaneous, File oriented, Directory oriented)</li> <li>Lab2: Shell Programming</li> <li>Write a shell program, which accepts the name of a file from standard input and perform the following test on it: <ol> <li>File readable</li> <li>File writable</li> <li>Both readable and writable</li> </ol> </li> </ul>	CC	01		
2. CPU Scheduling Algorithms	Lab3: Implement CPU Scheduling Algorithms: 1. FCFS 2. SJF 3. PRIORITY Lab4: 4. Round Robin 5. Multi-level Queue Scheduling	CC	03		
3. Deadlock	Lab5: Implementation of Banker's algorithm for the purpose	CC	)3		
Management 4. Memory Management Techniques 5. Disk	<ul> <li>of Deadlock Avoidance.</li> <li>Lab6: Write a program to simulate the following contiguous memory allocation techniques: <ul> <li>a) First fit</li> <li>b) Best fit</li> <li>c) Worst Fit</li> </ul> </li> <li>Lab7: a) Write a Program for implementation of Contiguous memory fixed partition technique.</li> <li>b) Write a program for implementation of Contiguous memory variable partition technique.</li> <li>Lab8: Write a program to simulate page replacement algorithms: <ul> <li>a) FIFO</li> <li>b) LRU</li> <li>c) Optimal</li> </ul> </li> </ul>	CC	)4		
5. DISK Scheduling Techniques	Laby: write a program to simulate Disk Scheduling         Algorithms:         a) FCFS         b) SSTF         Lab 10: c) SCAN & C-SCAN         d) Look & C-LOOK		21		
6. Process Synchronization	Lab11: Write a program to simulate Producer Consumer problem	CC	)2		
Lab Course Ou	tcome: After completion of this course students will be able to	L			
CO1	Gain all round knowledge of various Linux Commands.	K	2		

CO2	Analyze and implement Process Synchronization technique.	K4,K5
CO3	Analyze and implement CPU scheduling algorithms.	K4, K5
CO4	Analyze and implement Memory allocation and Memory management techniques.	K4, K5
CO5	Analyze and implement Disk Scheduling Policies.	K4, K5

B. TECH. SECOND YEAR				
Course Code	ACSAI0452	L T P	Credit	
Course Title	Database Management Systems Lab	0 0 2	1	
List of Experim	ients:			
Sr. No.	Name of Experiment		CO	
1.	Installing ORACLE/ MYSQL/NOSQL.		CO1	
2.	Creating Entity-Relationship Diagram using case tools with (entities, attributes, keys and relationships between entities, cardinalities, generalization, specialization etc.)	1 Identifying	CO1	
3.	I.Implement DDL commands –Create, Alter, Drop etII.Implement DML commands- Insert, Select, Update	c. , Delete	CO2	
4.	I.Implement DCL commands-Grant and RevokeII.Implement TCL commands- Rollback, Commit, SavIII.Implement different type key: -Primary Key, Foreigand Unique etc.	ve point m Key	CO2	
5.	Converting ER Model to Relational Model (Represent entiti relationships in Tabular form, Represent attributes as colum identifying keys).	es and ns,	CO1, CO2	
6.	Practice Queries using COUNT, SUM, AVG, MAX, MIN, OBY, HAVING, VIEWS Creation and Dropping.	GROUP	CO2	
7.	Practicing Queries using ANY, ALL, IN, EXISTS, NOT E UNION, INTERSECT, CONSTRAINTS etc.	XISTS,	CO2	
8.	Practicing Sub queries (Nested, Correlated) and Joins (Inne Equi).	r, Outer and	CO2	
9.	<b>Practicing on Triggers</b> - creation of trigger, Insertion usin Deletion using trigger, Updating using trigger	g trigger,	CO4	
10.	<b>Procedures-</b> Creation of Stored Procedures, Execution of I and Modification of Procedure	Procedure,	CO4	
11.	<b>Cursors-</b> Declaring Cursor, Opening Cursor, Fetching the the cursor.	data, closing	CO4	
12.	Study of Open Source NOSQL Database: MongoDB (Insta Basic CRUD operations, Execution)	CO5		
13.	Design and Develop MongoDB Queries using CRUD opera CRUD operations, SAVE method, logical operators)	CO5		
14.	Implement aggregation and indexing with suitable example MongoDB.	CO5		
15.	<ul> <li>15. Mini project (Design &amp; Development of Data and Application) for following: -</li> <li>a) Inventory Control System.</li> <li>b) Material Requirement Processing.</li> <li>c) Hospital Management System.</li> </ul>			

	d) Railway Reservation System.	
	e) Personal Information System.	
	f) Web Based User Identification System.	
	g) Timetable Management System.	
	h) Hotel Management System	
Lab Course Out	<b>come:</b> After completion of this course students will be able to	
CO 1	Design and implement he ER, EER model to solve the real-world	K6
	problem and transform an information model into a relational database	
	schema and to use a data.	
CO 2	Formulate and evaluate query using SQL solutions to a broad range of	K6
	query and data update problems.	
CO 3	Apply and create PL/SQL blocks, procedure functions, packages and	K3, K6
	triggers, cursors.	
CO 4	Analyze entity integrity, referential integrity, key constraints,	K4
	and domain constraints on database.	
CO5	Demonstrate understanding of MongoDB and its query	K3
	operations.	

		<b>B. TECH. SECOND YEA</b>	R		
<b>Course Code</b>		ACSAI0451		L T P	Credit
Course Title		<b>Introduction to Artificial Intelligence L</b>	ab	0 0 2	1
List of Exper	imen	5:			
Sr. No.		Name of Experiment			CO
1	Write	a python program to implement simple Chat-bot	•		CO1
2	Imple	ement Tic-Tac-Toe using A algorithm.			CO1
3	Imple pruni	ement alpha-beta pruning graphically with proper ng.	example	and justify the	CO2
4	Write	e a python program to implement Water Jug Probl	em.		CO2
5	Use I but n	Heuristic Search Techniques to Implement Best fin ot always optimal) and A algorithm (Always give	rst search s optimal	(Best-Solution solution).	CO3
6	Use I	Heuristic Search Techniques to Implement Hill-Cl	limbing A	Algorithm.	CO5
7	Write	a program to implement Hangman game using p	ython.		CO5
8	Write	e a program to solve the Monkey Banana problem	-		CO4
9	Write a python program to implement Simple Calculator program.			CO4	
10	Write a python program to POS (Parts of Speech) tagging for the give sentence using NLTK		CO5		
11	Solve 8-puzzle problem using best first search		CO5		
12	Solve	e Robot (traversal) problem using means End Ana	lysis.		CO5
13	Implementation of Image features Processing using OPENCV AND OPEN VINO		CO4		
14	Write	e a program to implement Naïve Bayes Algorithm	l		CO5
15	Write a Program to implement alpha-beta Pruning.		CO2		
Lab Course	Outco	ome: After completion of this course students wi	ll be able	to	
CO 1	Apply searching problems using various algorithms. Explain functionality of Chat-bot.		K3		
CO 2	Identify problems that are amenable to solution by AI methods, and which AI methods may be suited to solving a given problem.		K1		
CO 3	Implement the program to POS (Parts of Speech) tagging for the give sentence using NLTK.		K3		
CO 4	Design and carry out an empirical evaluation of different algorithms on a problem formalization, and state the conclusions that the evaluation supports.		K3		
CO5	Imple progr	ement basic AI algorithms (e.g., standard search a amming).	lgorithms	s or dynamic	К3

<b>B. TECH. SECOND YEAR</b>					
Course C	Code	ANC0402	LT P	Credits	
Course T	Course TitleEnvironmental Science200				
Course o	bjectiv	e:	· · ·		
1 To help	help the s p the stud	tudents in realizing the inter-relationship between man and envir ents in acquiring basic knowledge about environment.	onment. and		
2 To	develop t	he sense of awareness among the students about environment and	d its various prob	lems.	
3 To (	create pos	sitive attitude about environment among the student.			
4 To eva	develop luations	proper skill required for the fulfilment of the aims of environ	mental education	n and educational	
5 To	develop t	he capability of using skills to fulfil the required aims, to realise	and solve enviro	nmental problems	
thro	ough socia	al, political, cultural and educational processes			
Pre-requ	isites: 1	Basic knowledge of nature.			
		Course Contents / Syllabus			
UNIT-I	Bas	ic Principle of Ecology		8 Hours	
Food chains ecosystems. Sulphur Cyc Basic conce	s and for s and for Biogeoc cles. epts of sus	basic principles of ecology and environment. Ecosystem: Basic code webs. Ecological pyramids, Energy flow in ecological sy hemical Cycles: Importance, gaseous and sedimentary cycles. tainable development, SDGs, Ecosystem services, UN Decade for	soncepts, compon stems, Character Carbon, Nitroger or Ecorestoration	ents of ecosystem. istics of different a, Phosphorus and	
UNIT-II	Nat	ural Resources and Associated Problems		8 Hours	
Natural resources and associated problems. Forest resources: Use and over-exploitation, deforestation. Timber extraction, mining, dams and their effects on forest and tribal people. Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources. Food resources: World food problems, changes caused by agriculture and over- grazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity. Land resources: Land as a resource, land degradation, man induced landslides. Equitable use of resources for sustainable lifestyles. Non-Renewable Energy Resources: Fossil fuels and their reserves, Nuclear energy, types, uses and effects, Renewable Energy Resources: hydropower, Solar energy, geothermal, tidal and wind energy, Biomass energy, biogas and its					
UNIT-II	I Biod	liversity Succession and Non-Renewable Energy	v Resources	8 Hours	
Biodiversity and their importance, Threats to biodiversity, major causes, extinction's, vulnerability of species to extinction, IUCN threat categories, Red data book. Strategies for biodiversity conservation, principles of biodiversity conservation in-situ and ex-situ conservation strategies Mega diversity zones and Hot spots, concepts, distribution and importance. Succession: Concepts of succession, Types of Succession. Trends in succession. Climax and stability.					
UNIT-IV	UNIT-IV Pollution and Solid Waste Management 8 Hours				
Air pollution: sources of air pollution, Primary and secondary air pollutants. Origin and effects of SOX, NOX, Cox, CFC, Hydrocarbon, control of air pollution. Water pollution: sources and types of water pollution, Effects of water pollution, Eutrophication, Soil pollution: Causes of soil pollution, Effects of soil pollution, Major sources of and effects of noise pollution on health, Radioactive and thermal pollution sources and their effects on surrounding environment.					
Solid waste depletion.	disposal	and its effects on surrounding environment, Climate change, glo	bal warming, aci	l rain, ozone layer	
UNIT-V	Rol	e of Community and Environmental Protection	Acts	8 Hours	

Role of community, women and NGOs in environmental protection, Bioindicators and their role, Natural hazards, Chemical accidents and disasters risk management, Environmental Impact Assessment (EIA), Salient features of following Acts: a. Environmental Protection Act, 1986, Wildlife (Protection) Act, 1972.b. Water (Prevention and control of pollution) Act, 1974.c. Air (Prevention and control of pollution) Act, 1981. Forest (Conservation) Act, 1980.d. Wetlands (Conservation and Management) Rules, 2017; e. Chemical safety and Disaster Management law. F. District Environmental Action Plan. Climate action plans.

**Course outcome:** After completion of this course students will be able to

CO 1	Understand the basic principles of ecology and environment. Ecosystem: Basic concepts,	K2
	components of ecosystem., food chains and food webs. Ecological pyramids	
CO 2	Understand the different types of natural recourses like food, forest, minerals and energy and their	K2
	conservation	
CO 3	Understand the importance of biodiversity, Threats of biodiversity and different methods of	K2
	biodiversity conservation.	
CO 4	Understand the different types of pollution, pollutants, their sources, effects and their control	K3
	methods	
CO 5	Understand the basic concepts of sustainable development, Environmental Impact Assessment	K3
	(EIA) and different acts related to environment

B. TECH. SECOND YEAR					
Course Code	ANC0401	L	Т	Р	Credit
Course Title	Cyber Security	2	0	0	0
Course objective:		•			
Achieve knowledge abo vulnerability in various data from cyber-attackar	ut Security of Information system and Risk factors and exami- scenarios, understand concept of cryptography and encryption nd provide protection for software and hardware.	ne se tech	curity nique	three to pi	ats and cotect the
Pre-requisites: Basic Concept of netwo Com	es recognition in the domain of Computer Science. ork and operating system. nands of programming language.				
	<b>Course Contents / Syllabus</b>				
UNIT-I	Introduction				8 Hours
Introduction to Informat for Information Securit Password and WI-FI S Management.	ion Systems: Types of Information Systems, Development of I ty, Threats to Information Systems, Information Assuranc ecurity and social media and Windows Security, Security	nforr e, G Risk	nation uidel X Ana	n Sys ines alysis	tems, Need for Secure , and Risk
UNIT-II	Application Layer Security				8 Hours
Data Security Considera Intrusion Detection, Acc E-mail Viruses, Macro V E-Commerce: Electronic	ations-Backups, Archival Storage and Disposal of Data,Securess Control, Security Threats -Viruses, Worms, Trojan Horse, Viruses, Malicious Software,Network and Denial of Services A c Payment System, e- Cash, Issues with Credit/Debit Cards.	Bom, Attac	Techi bs,Tr k, Se	nolog apdo curity	y-Firewall, ors,Spoofs, y,Threats to
UNIT-III	Secure System Development				8 Hours
Application Developme Downloadable Devices, Assets, Access Control,	ent Security, Architecture & Design, Security Issues in Har Mobile Protection, Security Threats involving in social medi CCTV and Intrusion Detection Systems, Backup Security Me	dwar a, Pł asure	re: D nysica es.	ata S 1 Sec	torage and curity of IT
UNIT-IV	Cryptography And Network Security				8 Hours
Public key cryptography:RSA Public Key Crypto with implementation in Python,Digital Signature Hash Functions,Public Key Distribution. Symmetric key cryptography: DES (Data Encryption Standard), AES (Advanced Encryption Standard), Secure hash algorithm(SHA-1).					
Real World Protocols: Basic Terminologies, VPN, Email Security Certificates, Transport Layer Security, TLS, IP security, DNS Security.					
UNIT-VSecurity Policy8 Hours					
Policy design Task, WWW Policies, Email based Policies, Policy Revaluation Process-Corporate Policies- Sample Security Policies, Publishing and Notification Requirement of the updated and new Policies. Resent trends in security.					
<b>Course outcome:</b> At the end of course, the student will be able to					
CO 1	Analyze the cyber security needs of an organization.			K4	
CO 2	Identify and examine software vulnerabilities and security solutions.			K1,K	3

CO 3	Comprehend IT Assets security (hardware and Software)	K2			
CO 4	Measure the performance and encoding strategies of	K3, K5			
	security systems.				
CO 5	Understand and apply cyber security methods and policies to enhance current scenario security.	K2, K3
