Bachelor of Technology Computer Science and Engineering (Artificial Intelligence)

AICTE Guidelines in Model Curriculum:

A student will be eligible to get Under Graduate degree with Honours only, if he/she completes the additional MOOCs courses such as Coursera certifications, or any other online courses recommended by the Institute (Equivalent to 20 credits). During Complete B.Tech. Program Guidelines for credit calculations are as follows.

- 1. For 6 to 12 Hours =0.5 Credit
- 2. For 13 to18 =1 Credit
- 3. For 19 to 24 =1.5 Credit
- 4. For 25 to 30 =2 Credit
- 5. For 31 to 35 =2.5 Credit
- 6. For 36 to 41 =3 Credit
- 7. For 42 to 47 =3.5 Credit
- 8. For 48 and above =4 Credit

For registration to MOOCs Courses, the students shall follow Coursera registration details as per the assigned login and password by the Institute these courses may be cleared during the B. Tech degree program (as per the list provided). After successful completion of these MOOCs courses, the students shall provide their successful completion status/certificates to the Controller of Examination (COE) of the Institute through their coordinators/Mentors only.

The students shall be awarded Honours Degree as per following criterion.

- i. If he / she secures 7.50 as above CGPA.
- ii. Passed each subject of that degree program in the single attempt without any grace.
- iii. Successful completion of MOOCs based 20 credits.

B. TECH THIRD YEAR Course code ACSE0503 LTP Credits **Course title DESIGN THINKING-II** 2 1 0 3 **Course Objectives:** The objective of this course is to upgrade Design Thinking skills by learning & applying advanced and contextual Design Thinking Tools. It aims to solve a Real-Life Problem by applying Design Thinking to create an impact for all the stakeholders **Pre-requisites:** Student must complete Design Thinking-I course. **Course Contents / Syllabus** UNIT-I **INTRODUCTION 10 HOURS** Design thinking & Innovation, Design Thinking Mindset and Principles, recap of 5-Step Process of Design Thinking, Design Approaches, additional in-depth examples of each design approaches. Simon Sinek's – Start with Why, The Golden Circle, Asking the "Why" behind each example (an in-class activity of asking 5-WHYS), The Higher Purpose, in-class activity for LDO & sharing insights Visualization and it's importance in design thinking, reflections on wheel of life (in-class activity for visualization & Wheel of Life), Linking it with Balancing Priorities (in class activity), DBS Singapore and Bank of Americas' Keep the Change Campaign. Litter of Light & Arvind Eye Care Examples, understanding practical application of design thinking tools and concepts, case study on McDonald's Milkshake / Amazon India's Rural Ecommerce & Gillette Working on 1-hour Design problem, Applying RCA and Brainstorm on innovative solutions.

Main project allocation and expectations from the project.

UNIT-II REFINEMENT AND PROTOTYPING 8 HOURS Pafine and parrow down to the best idea, 10, 100, 1000 gm, OBL, Design Tools for Convergence, SWOT Analysis

Refine and narrow down to the best idea, 10-100-1000gm, QBL, Design Tools for Convergence – SWOT Analysis for 1000gm discussion. In-class activity for 10-100-1000gm & QBL

Prototyping (Convergence): Prototyping mindset, tools for prototyping – Sketching, paper models, pseudo-codes, physical mockups, Interaction flows, storyboards, acting/role-playing etc, importance of garnering user feedback for revisiting Brainstormed ideas.

Napkin Pitch, Usability, Minimum Viable Prototype, Connecting Prototype with 3 Laws, A/B Testing, Learning Launch. Decision Making Tools and Approaches – Vroom Yetton Matrix, Shift-Left, Up, Right, Value Proposition, Case study: Careerbuddy, You-Me-Health Story & IBM Learning Launch.

In-class activities on prototyping- paper-pen / physical prototype/ digital prototype of project's 1000gm idea.

UNIT-III STORYTELLING, TESTING AND ASSESSMENT

8 HOURS

Storytelling: Elements of storytelling, Mapping personas with storytelling, Art of influencing, Elevator Pitch, Successful Campaigns of well-known examples, in-class activity on storytelling. Testing of design with people,

conducting usability test, testing as hypothesis, testing as empathy, observation and shadowing methods, Guerrilla Interviews, validation workshops, user feedback, record results, enhance, retest, and refine design, Software validation tools, design parameters, alpha &beta testing, Taguchi, defect classification, random sampling. Final Project Presentation and assessing the impact of using design thinking

UNIT-IV

INNOVATION, QUALITY AND LEADERSHIP

6 HOURS

Innovation: Need & Importance, Principles of innovations, Asking the Right Questions for innovation, Rationale for innovation, Quality: Principles & Philosophies, Customer perception on quality, Kaizen, 6 Sigma. FinTech case study of Design Thinking application – CANVAS

Leadership, types, qualities and traits of leaders and leadership styles, Leaders vs Manager, Personas of Leaders & Managers, Connecting Leaders-Managers with 13 Musical Notes, Trait theory, LSM (Leadership Situational Model), Team Building Models: Tuckman's and Belbin's. Importance of Spatial elements for innovation.

UNIT-V

UNDERSTANDING HUMAN DESIRABILITY

8 HOURS

Comprehensive human goal: the five dimensions of human endeavour (Manaviya - Vyavstha) are: Education-Right living (Sikhsa- Sanskar), Health – Self-regulation (Swasthya - Sanyam), Justice – Preservation (Nyaya- Suraksha), Production – Work (Utpadan – Karya), Exchange – Storage (Vinimya – Kosh), Darshan-Gyan-Charitra (Shifting the Thinking)

Interconnectedness and mutual fulfilment among the four orders of nature recyclability and self-regulation in nature, Thinking expansion for harmony: Self-exploration (Johari's window), group behaviour, interpersonal behaviour and skills, Myers-Briggs personality types (MBTI), FIRO-B test to repair relationships.

Course outcome: After completion of this course, students will be able to

CO 2Construct innovate ideas using design thinking tools and converge to feasible idea for breakthrough solutionCO 3Implement storytelling for persuasive articulationCO 4Understanding the nature of leadership empowerment	CO 1	Learn sophisticated design tools to sharpen their problem-solving skills	K2
CO 4 Understanding the nature of leadership empowerment	CO 2		K6
	CO 3	Implement storytelling for persuasive articulation	K3
	CO 4	Understanding the nature of leadership empowerment	K2

B. TECH THIRD YEAR

Course Code	ACSE0505	L	ТР	Credits
Course Title	WEB TECHNOLOGY	3	0 0	3

Course objective: This course covers different aspect of web technology such as HTML, CSS, Java Script and provide fundamental concepts of Internet, Web Technology and Web Programming. Students will be able to build a proper responsive website.

Pre-requisites: Basic Knowledge of any programming language like C/C++/Python/Java. Familiarity with basic concepts of Internet.

	Course Contents / Syllabus	
UNIT-I	Basics of Web Technology & Testing	8 Hours

History of Web and Internet, connecting to Internet, Introduction to Internet services and tools, Client-Server Computing, Protocols Governing Web, Basic principles involved in developing a web site, Planning process, Types of Websites, Web Standards and W3C recommendations, Web Hosting Basics, Types of Hosting Packages, Introduction to Web testing, Functional Testing,

Usability & Visual Testing, Performance & Load Testing.

UNIT-II Introduction to HTML & XML

HTML, DOM- Introduction to Document Object Model, Basic structure of an HTML document, Mark up Tags, Heading-Paragraphs, Line Breaks, Understand the structure of HTML tables. Lists, working with Hyperlinks, Image Handling, Understanding Frames and their needs, HTML forms for User inputs. New form Elements- date, number, range, email, search and data list, Understanding audio, video and article tags XML Syntax, Elements, Attributes, Namespaces, Display, HTTP request, Parser, DOM, XPath, XSLT, XQuerry, XLink, Validator, DTD and XML Schema.

UNIT-III Concepts of CSS3 & Bootstrap

Creating Style Sheet, CSS Properties, CSS Styling (Background, Text Format, Controlling Fonts), Working with block elements and objects, Working with Lists and Tables, CSSIdandClass, BoxModel(Introduction, JavaScript Borderproperties, PaddingProperties, Marginproperties) CSS Advanced(Grouping, Dimension, Display, Positioning,

Floating, Align,Pseudoclass,NavigationBar,ImageSprites,Attributesector),CSSColor,CreatingpageLayoutandSite. Bootstrap Features & Bootstrap grid system, Bootstrap Components, Bootstrap Plug-Ins.

UNIT-IV JavaScript and ES6

Introduction to Java Script, JavascriptTypes, Var, Let and Const Keywords, Operators in JS, Conditional Statements, Java Script Loops, JS Popup Boxes JS Events, JS Arrays, Working with Arrays, JS Objects, JS Functions Validation of Forms, Arrow functions and default arguments, Template Strings, Strings methods, Callback functions, Object destructuring, Spread and Rest Operator, Typescript fundamentals, Typescript OOPs- Classes, Interfaces, Constructor etc. Decorator and Spread Operator, Asynchronous Programming in ES6, Promise Constructor, Promise with Chain, Promise Race.

UNIT-V Introduction to PHP

Basic Syntax of PHP, Variables & Constants, Data Type, Operator & Expressions, Control flow and Decision making statements, Functions, Strings, Arrays, Understanding file& directory, Opening and closing, a file, Copying, renaming and deleting a file, working with directories, Creating and deleting folder, File Uploading &Downloading. Introduction to Session Control, Session Functionality What is a Cookie, Setting Cookies with PHP. Using Cookies with Sessions, Deleting Cookies, Registering Session variables, Destroying the variables and Session.

B.	TECH	THIRD	YEAR	(ELECTIVE I)

Course Code ACSE0511

Course Title CRM FUNDAMENTALS

Course objective: This course is designed to help in understanding the fundamentals of CRM. It will help in providing better services for Sales, Marketing and Customer Relations in an Enterprise. To make the students understand the organizational need, benefits and process of creating long-term value for individual customers. To disseminate knowledge regarding the concept of e-CRM and e-CRM technologies. To enable the students understand the technological and human issues relating to implementation of Customer Relationship Management in the organizations.

Pre-requisites: None

Course Contents / Syllabus

UNIT-I Introduction

CRM- definition, history, goals. Sources of CRM value. Components of CRM: people, process, technology. Evolution of CRM: marketing and its principles, customer relations to CRM. Dynamics of Customer Supplier Relationships, Nature and context of CRM, Strategy and Organization of CRM: strategy, The relationship-oriented organization: Mission, Culture, Structure, People, Communication & Information Systems.

CRM Strategy and Framework UNIT-II

Developing a CRM strategy. Customer oriented (C in CRM), Relationship driven, 360 degree view of customer. CRM system features- functions, application, benefits and solutions. Importance of loyalty- active, passive, split, shifting and switchers, customer profiling, customer segmentation model, Customer Experience, relationship marketing and journey, Case study.

UNIT-III	Solution Design and Architecture	8 Hours
	Solution Design and Architecture	0 11001 5

CRM system solution- specifications. Data Analysis, Solution Requirements. Types of CRM- On-Premise, cloud based. Pros and Cons of each. Integration CRM with other enterprise applications.

The Technology of CRM: Data warehouses and customer relationships, creating data mart model, components of operational data warehouse.

UNIT-IV **CRM for Business**

CRM in Sales, Service, Marketing, E-commerce. Social Customer Relationship Management. Analytical CRM: Predictive Analytics Vs Operational Analytics. Channel Partner Relationship management, Collaborative CRM (using data pooling), Business Benefits of Cloud Based System, SLAs, Practical Challenges.

CRM implementation UNIT-V

Building CRM roadmaps: current processes, customers, strategic goals, technology issues, pilot and proof of concept projects. Preliminary Roadmap and its template, developing roadmap midstream. Design stage, custom development, integration, reporting, data migration, and implementation, testing, launching and application management. Introduction to following CRM tools: ZOHO, Pega, Microsoft Dynamics 365, Sales force.

Course Outcome: At the end of course, the student will be able		
CO 1	Understand the basic concepts of Customer relationship management.	K1, K2
CO 2	To understand strategy and framework of Customer relationship management.	K2

Course out	come: After completion of this course students will be able to:	
CO 1	Understand the fundamental concepts of data analytics in the areas that plays major role within the realm of data science.	
CO 2	Explain and exemplify the most common forms of data and its representations.	
CO 3	Understand and apply data pre-processing techniques.	
CO4	Analyse data using exploratory data analysis.	
CO 5	Illustrate various visualization methods for different types of data sets and application scenarios.	

Text books:

1)Glenn J. Myatt, Making sense of Data: A practical Guide to Exploratory Data Analysis and Data Mining, John Wiley Publishers, 2007.

2)Data Analysis and Data Mining, 2nd Edition, John Wiley & Sons Publication, 2014.

Reference Books:

1)Open Data for Sustainable Community: Glocalized Sustainable Development Goals, Neha Sharma, Santanu Ghosh, Monodeep Saha, Springer, 2021.

2)The Data Science Handbook, Field Cady, John Wiley & Sons, Inc, 2017

3)Data Mining Concepts and Techniques, Third Edition, Jiawei Han, Micheline Kamber, Jian Pei, Morgan Kaufmann, 2012.

B. TECH THIRD YEAR (ELECTIVE-II)

Course code **ACSAI0519**

Course title BUSINESS INTELLIGENCE AND DATA VISUALIZATION

Course objective: This course covers fundamental concepts of Business Intelligence tools, techniques, components and its future. As well as a bit more formal understanding of data visualization concepts and techniques. The underlying theme in the course is feature of Tableau, its capabilities.

Pre-requisites: Basic Knowledge of Business intelligence.

Course Contents / Syllabus INTRODUCTION TO BUSINESS INTELLIGENCE UNIT-I

8 HOURS

Credits

3

LTP

300

Business Intelligence (BI), Scope of BI solutions and their fitting into existing infrastructure, BI Components and architecture, BI Components, Future of Business Intelligence, Functional areas of BI tools, End user assumptions, setting up data for BI, Data warehouse, OLAP and advanced analytics, Supporting the requirements of senior executives including performance management, Glossary of terms and their definitions specific to the field of BI and BI systems.

UNIT-II ELEMENTS OF BUSINESS INTELLIGENCE SOLUTIONS 8 HOURS

Business Query and Reporting, Reporting, Dashboards and Scorecards Development, Development, Scorecards, Metadata models, Automated Tasks and Events, Mobile Business Intelligence, Software development kit (SDK). Stages of Business Intelligence Projects, Project Tasks, Risk Management and Mitigation, Cost justifying BI solutions and measuring success, BI Design and Development, Building Reports, Building a Report, Drill-up, Drill-down Capabilities.

UNIT-III **TABLEAU**

Introductions and overview: What Tableau can and cannot do well, Debug and troubleshoot installation and configuration of the software.

Creating Your First visualization: Getting started with Tableau Software, Using Data file formats, connecting your Data to Tableau, creating basic charts (line, bar charts, Tree maps), Using the Show me panel

Tableau Calculations: Overview of SUM, AVR, and Aggregate features Creating custom calculations and fields, Applying new data calculations to your visualization.

Formatting Visualizations: Formatting Tools and Menus, formatting specific parts of the view, Editing and Formatting Axes.

UNIT-IV DATA VISUALIZATION

Manipulating Data in Tableau: Cleaning-up the data with the Data Interpreter, structuring your data, Sorting, and filtering Tableau data, Pivoting Tableau data.

Advanced Visualization Tools: Using Filters, Using the Detail panel Using the Size panels, customizing filters, Using and Customizing tooltips, Formatting your data with colours.

Creating Dashboards & Stories: Using Storytelling, creating your first dashboard and Story, Design for different displays, Adding interactivity to your Dashboard

Distributing & Publishing Your Visualization: Tableau file types, Publishing to Tableau Online, sharing your visualization, Printing, and exporting.

Given a case study: Perform Interactive Data Visualization with Tableau

8 HOURS

UNIT-V

INTRODUCTION TO POWER BI

Describe the Power BI ecosystem, Define Power BI and its relationship with Excel, Discuss the Power BI suite of products, Describe how the Power BI products integrate, Explain the typical analytics process flow, Differentiate between the various data sources, Connect Power BI to a data source, Clean and transform data to ensure data quality, Load the data to the Power BI Data Model, Describe the Power BI ecosystem, Define Power BI and its relationship with Excel, Discuss the Power BI suite of products, Describe how the Power BI products integrate, Explain the typical analytics process flow.

Course ou	After completion of this course students will be able to	
CO 1	Apply quantitative modelling and data analysis techniques to the solution of real-world business problems	K2
CO 2	Understand the importance of data visualization and the design and use of many visual components	K2
CO 3	Understand as products integrate defining various analytical process flow.	K2
CO 4	Learn the basics of troubleshooting and creating charts using various formatting tools.	K4
CO 5	Learn basics of structuring data and creating dashboard stories adding interactivity dashboard stories.	K6

B. TECH THIRD YEAR (ELECTIVE I) Course Code ACSE0512 LTP Credits Course Title PYTHON WEB DEVELOPMENT WITH DJANGO 3 0 0 3 **Course objective:** This course focuses on how to design and build static as well as dynamic webpages and interactive web based applications. These courses mainly focus how Python operates within web development using the increasingly popular Django framework. **Pre-requisites:** Students should have good knowledge of Python Programming and Python coding experience. **Course Contents / Syllabus** UNIT-I **Python libraries for web development** 8 Hours Collections-Container datatypes, Tkinter-GUI applications, Requests-HTTP requests, BeautifulSoup4-web scraping, Scrapy, Zappa, Dash, CherryPy, Turbo Gears, Flask, Web2Py, Bottle, Falcon, Cubic Web, Quixote, Pyramid. UNIT-II **Introduction to Django Framework** 8 Hours

Understanding Django environment, Features of Django and Django architecture, MVC and MTV, Urls and Views, Mapping the views to URLs, Django Template, Template inheritance Django Models, Creating model for site, Converting the model into a table, Fields in Models, Integrating Bootstrap into Django, Creating tables, Creating grids, Creating carousels.

UNIT-IIIIntegrating Accounts & Authentication on Django8 HoursIntroduction to Django Authentication System, Security Problem & Solution with Django Creating Registration Form

Introduction to Django Authentication System, Security Problem & Solution with Django Creating Registration Form using Django, Adding Email Field in Forms, Configuring email settings, Sending emails with Django, Adding Grid Layout On Registration Page, Adding Page Restrictions, Login Functionality Test and Logout.

8 Hours

UNIT-IV Connecting SQLite with Django

Database Migrations, Fetch Data From Database, Displaying Data On Templates, Adding Condition On Data, Sending data from url to view, Sending data from view to template, Saving objects into database, Sorting objects, Filtering objects, Deleting objects, Difference between session and cookie, Creating sessions and cookies in Django.

UNIT-VDeploying Django Web Application on Cloud8 HoursCreating a functional website in Django, Four Important Pillars to Deploy, registering on Heroku and GitHub, Push
project from Local System to GitHub, Working with Django Heroku, Working with Static Root, Handling WSGI with
gunicorn, Setting up Database & adding users.Setting up Database & adding users.Course Outcome:After completion of this course students will be able to

CO 1	Apply the knowledge of python programing that are vital in understanding Django application and analyze the concepts, principles and methods in current client-side technology to implement Django application over the web.	
CO 2	Demonstrate web application framework i.e. Django to design and implement typical dynamic web pages and interactive web based applications.	
CO 3	Implementing and analyzing the concept of Integrating Accounts & Authentication on Django.	
CO 4	Understand the impact of web designing by database connectivity with SQLite in the current market place where everyone uses to prefer electronic medium for shoping, commerce, and even social life also.	K2, K3
CO 5	Analyzing and creating a functional website in Django and deploy Django Web Application on Cloud.	K3, K6

B. TECH THIRD YEAR (ELECTIVE -I) Course Code ACSAI0515 LTP Credits Course Title | MOBILE APPLICATION DEVELOPMENT 300 3 **Course objective:** This course introduces students to programming technologies, design and development related to mobile applications using android/ iOS. Course also aims at mobile application development frameworks; mobile architecture, design and engineering issues, techniques, methodologies for mobile application development. Pre-requisites: Overview of programming language: JAVA and XML. **Course Contents / Syllabus Introduction to Mobile Application and Architecture** UNIT-I **8 Hours** Mobile applications, History of mobile application frameworks, Characteristics and types of mobile applications, Achieving quality constraints. Mobile Architecture- Mobile Hardware Architecture: processors used for Mobile and Handheld devices and SoC architecture; Mobile Software Architecture: Real Time Operating systems and Mobile Real Time Operating Systems, SDK's. **Android Developing Environment** UNIT-II 6 Hours Introduction to Android, Android ecosystem, Android SDK and Installation, Layered Architecture of Android, Android API levels (versions & version names), Android Development Tools, Basic Building blocks -Protocols, Activities, Services, Broadcast Receivers & Content providers. UNIT-III **UI** Components and Multimedia **10 Hours** Fundamental UI design, layout and view types, Interaction with server-side applications – Using Google Maps, GPS and Wi-Fi, Integration with social media applications, Interfacing sensor data with mobile application, Accessing applications hosted in a cloud computing environment. Multimedia Supported audio and video formats, Audio capture, Bluetooth, Animation. **Android Application Deployment** 8 Hours UNIT-IV Persisting data using SQLite database, Testing and debugging Android Application, Packaging and Android Application Deployment on device with Windows, Android Permissions. Testing and publishing of Mobile Applications on different app stores. **UNIT-V** iOS and Swift 8 Hours Introduction to Objective C, iOS features, UI implementation, Touch frameworks, Data persistence using Core Data and SQLite, Location aware applications using Core Location and Map Kit, integrating calendar and address book with social media application, using Wifi - iPhone marketplace. Swift: Introduction to Swift, Features of swift. **Course outcome:** After completion of this course students will be able to CO 1 Recall vision, definition, conceptual framework, architecture of mobile K1 applications. Describe and configure android development environment, tools, and **CO 2** K2 architecture

CO 3	Create and implement UI components and multimedia framework, fragments, audio capture, animation, and other activities.	K6
CO 4	Integrate and interact with server-side applications with testing and deployment of android application.	K3
CO 5	Analyze iOS and swift features, frameworks, map kit, and social media applications.	K4

B. TECH. THIRD YEAR 5 th / 6 th					
Course code	ANC0501	L	Τ	Р	Credits
Course Title	CONSTITUTION OF INDIA, LAW AND	2	0	0	2
	ENGINEERING				
Course objecti	ve: To acquaint the students with legacies of constitutional develop	men	t in Iı	ndia a	nd help them
to understand the	most diversified legal document of India and philosophy behind it.				
Pre-requisites:	Computer Organization and Architecture				
	Course Contents / Syllabus				
UNIT-I	INTRODUCTION AND BASIC INFORMATION ABOUT CONSTITUTION	UT	IND	IAN	8 Hours
Meaning of the d	constitution law and constitutionalism, Historical Background of	the	Cons	stituer	t Assembly,
Government of In	dia Act of 1935 and Indian Independence Act of 1947, Enforcement	nt of	the C	onstit	ution, Indian
Constitution and i	ts Salient Features, The Preamble of the Constitution, Fundamental	Righ	ts, Fu	ındam	ental Duties,
Directive Principl	es of State Policy, Parliamentary System, Federal System, Centre-S	State	Rela	tions,	Amendment
of the Constitution	nal Powers and Procedure, The historical perspectives of the constitu	ution	al am	endm	ents in India,
• •	ions: National Emergency, President Rule, Financial Emergency, a	nd L	ocal S	Self G	overnment –
Constitutional Sch					
UNIT-II	UNION EXECUTIVE AND STATE EXECUTIVE				8 Hours
Powers of Indian	Parliament Functions of Rajya Sabha, Functions of Lok Sabha, F	Power	rs an	d Fun	ctions of the
President, Compa	rison of powers of Indian President with the United States, Pow	vers a	nd F	Function	ons of Vice-
	and Functions of the Prime Minister, Judiciary - The Independent			-	
	udges, Judicial Review, Public Interest Litigation, Judicial Activisr				-
	ruktas Act 2013, State Executives – Powers and Functions of the Gov				
	ster, Functions of State Cabinet, Functions of State Legislature, F	uncti	ons	of Hig	gh Court and
Subordinate Court					
UNIT-III	INTRODUCTION AND BASIC INFORMATION ABO SYSTEM	UT	LEC	JAL	8 Hours
The Legal System	a: Sources of Law and the Court Structure: Enacted law -Acts of	Parl	iame	nt are	of primary
e .	non Law or Case law, Principles taken from decisions of judges co				· ·
-	n in India and Foreign Courtiers (District Court, District Consum			-	-
Courts, Supreme Court). Arbitration: As an alternative to resolving disputes in the normal courts, parties who are					
in dispute can agree that this will instead be referred to arbitration. Contract law, Tort, Law at workplace.					
UNIT-IV	INTELLECTUAL PROPERTY LAWS AND REGULATION INFORMATION	ТО			8 Hours
Intellectual Property Laws: Introduction, Legal Aspects of Patents, Filing of Patent Applications, Rights from					
Patents, Infringement of Patents, Copyright and its Ownership, Infringement of Copyright, Civil Remedies for					
Infringement, Regulation to Information, Introduction, Right to Information Act, 2005, Information Technology					
Act, 2000, Electronic Governance, Secure Electronic Records and Digital Signatures, Digital Signature					
Certificates, Cyber Regulations Appellate Tribunal, Offences, Limitations of the Information Technology Act.					
UNIT-V	BUSINESS ORGANIZATIONS AND E-GOVERNANCE				8 Hours
Sole Traders, Pa	artnerships: Companies: The Company's Act: Introduction, F	orma	tion	of a	Company,

Memorandum of Association, Articles of Association, Prospectus, Shares, Directors, General Meetings and Proceedings, Auditor, Winding up. E-Governance and role of engineers in E-Governance, Need for reformed engineering serving at the Union and State level, Role of I.T. professionals in Judiciary, Problem of Alienation and Secessionism in few states creating hurdles in Industrial development.

COURSE OUTCOMES: After completion of this course students will be able to

		1	
C	CO 1	Identify and explore the basic features and modalities about Indian constitution.	
C	CO 2 Differentiate and relate the functioning of Indian parliamentary system at the		K2
		center and state level.	
C	CO 3	Differentiate different aspects of Indian Legal System and its related bodies.	K4
C	CO 4 Discover and apply different laws and regulations related to engineering		K4
		practices.	
C	CO 5 Correlate role of engineers with different organizations and governance models		K4

Course code	ANC0502	L T P	Credits		
Course Title	ESSENCE OF INDIAN TRADITIONAL	2 0 0	2		
	KNOWLEDGE				
Course objecti	ve: This course aims to provide basic knowledge about different	theories of soci	ety, state and		
polity in India, Ind	lian literature, culture, Indian religion, philosophy, science, manag	gement, cultural	heritage and		
different arts in In-	lia.				
Pre-requisites:	Computer Organization and Architecture				
	Course Contents / Syllabus				
UNIT-I	SOCIETY STATE AND POLITY IN INDIA		8 Hours		
State in Ancient I	ndia: Evolutionary Theory, Force Theory, Mystical Theory Cont	ract Theory, St	ages of State		
Formation in And	ient India, Kingship, Council of Ministers Administration Polit	tical Ideals in A	Ancient India		
Conditions' of the	Welfare of Societies, The Seven Limbs of the State, Society is	n Ancient India	ı, Purusārtha,		
-	em, Āshrama or the Stages of Life, Marriage, Understanding Gen	der as a social o	category, The		
representation of V	Vomen in Historical traditions, Challenges faced by Women.				
UNIT-II	INDIAN LITERATURE, CULTURE, TRADITION, AND PR	ACTICES	8 Hours		
Evolution of scrip	t and languages in India: Harappan Script and Brahmi Script. The	e Vedas, the Up	anishads, the		
	e Mahabharata, Puranas, Buddhist And Jain Literature in Pali				
-	a's Arthashastra, Famous Sanskrit Authors, Telugu Literature, Ka		-		
Literature ,Sangan	a Literature Northern Indian Languages & Literature, Persian And	Urdu ,Hindi Li	terature		
UNIT-III	INDIAN RELIGION, PHILOSOPHY, AND PRACTICES		8 Hours		
Pre-Vedic and Ve	dic Religion, Buddhism, Jainism, Six System Indian Philosoph	y, Shankaracha	rya, Various		
Philosophical Doc	trines, Other Heterodox Sects, Bhakti Movement, Sufi moven	nent, Socio reli	gious reform		
movement of 19th	century, Modern religious practices.				
UNIT-IV	SCIENCE, MANAGEMENT AND INDIAN KNOWLEDGE S	SYSTEM	8 Hours		
			0 11001 5		
Astronomy in Indi	a, Chemistry in India, Mathematics in India, Physics in India, Agric	culture in India,	Medicine in		
India, Metallurgy	in India, Geography, Biology, Harappan Technologies, Water M	anagement in I	ndia, Textile		
Technology in In	dia ,Writing Technology in India Pyrotechnics in India Trade	e in Ancient I	ndia/,India's		
Dominance up to l	Pre-colonial Times.				
UNIT-V	CULTURAL HERITAGE AND PERFORMING ARTS		8 Hours		
Indian Architect, I	Engineering and Architecture in Ancient India, Sculptures, Pottery,	Painting, Indiar	Handicraft,		
UNESCO'S List o	f World Heritage sites in India, Seals, coins, Puppetry, Dance, Mu	sic, Theatre, dra	ama, Martial		
Arts Traditions, Fairs and Festivals, UNESCO'S List of Intangible Cultural Heritage, Calenders, Current					
developments in Arts and Cultural, Indian's Cultural Contribution to the World. Indian Cinema.					
COURSE OUTCOMES: After completion of this course students will be able to					
CO 1	Understand the basics of past Indian politics and state polity.		K2		
CO 2	Understand the Vedas, Upanishads, languages & literature of India	an society.	K2		

	CO 3	Know the different religions and religious movements in India.	K4
	CO 4	Identify and explore the basic knowledge about the ancient history of Indian	K4
		agriculture, science & technology, and Ayurveda.	
	CO 5	Identify Indian dances, fairs & festivals, and cinema.	K1

development. Th	e course	e objective of this course is to provide conceptual understanding of e covers the technological underpinning of Blockchain operations of solutions using Blockchain technology.		11			
Pre-requisites Cryptography Teo Data Structures an to Programming	chniques	s rithmsIntroduction					
		Course Contents / Syllabus					
UNIT-I		Introduction		8 HOURS			
Permissioned Mo	odel of B es: Crypt	Consensus, Public vs Private Block chain, Understanding Crypto o lock chain, Overview of Security aspects of Blockchain tographic Hash Function, Properties of a hash function, Hash pointer yptography, basic cryptocurrency	-				
UNIT-II		Understanding Blockchain with Cryptocurrency		8 HOURS			
Transaction in Bi Working with C Proof of Work (P Mining Difficulty Working with C	tcoin Ne Consensu COW) – ba y, Mining Consensu	: Creation of coins, Payments and double spending, Bitcoin Script etwork, Block Mining, Block propagation and block relay. Is in Bitcoin: Distributed consensus in open environments, Consens asic introduction, Proof of Stake, Proof of Burn and Proof of Elapsed g Pool, Block Reward, Transaction cost. Is in Ethereum: Consensus in Ethereum Network, Proof of Work, ing, Mining Difficulty Algorithm, Block Reward, Uncle Reward, T	sus in a Bite l Time, Bite Proof of St	coin network coin Minning take, Proof of			
Attacks on PoW a	and the r	nonopoly problem					
Attacks on PoW a		nonopoly problem Understanding Blockchain for Enterprises		8 HOURS			

Enterprise application of Blockchain: Supply chain, Supply Chain Finance, Digital currency, TradeFinance, Tampering Proof Digital Certificate, E-Governance.

8 HOURS

UNIT-IV Blockchain Ethereum

Ethereum: Overview of Ethereum Foundation, History of Ethereum Blockchain Development, Hard Forks.

Introduction: Architecture Overview, Key Terminologies, Key Concepts, Ethereum Network, Ethereum Client, Ethereum Virtual Machines, state database, Important ERC standards.

Application Development: Ethereum Public/Private network, Ethereum Test networks, Solidity, Writing Smart contract, deploy Smart contracts, Smart contract coding standards, Smart contract security and vulnerability.

UNIT-V	Blockchain Hyperledger Fabric	8 HOURS

Hyperledger: Overview of Hyperledger Foundation

Introduction: Architecture Overview, Key Terminologies, Key Concepts, Identities and Policies, Membership and Access Control, Channels and Private data, Transaction Validation, Consensus (Solo, Kafka and Raft), Hyperledger Fabric 1.x vs Hyperledger Fabric 2.x

Application development: Hyperledger Fabric 1.x and Hyperledger Fabric 2.x Network design, Chaincode life cycle, Writing Chaincode, Deploying Chaincode.

Course outcome: After completion of this course students will be able to					
CO1	Understand blockchain technology.	K2			
CO2	Develop blockchain based solutions and write smart contract using Hyperledger Fabric andEthereum frameworks.	K6			
CO3	Build and deploy blockchain application for on premise and cloud-based architecture	K6			
CO4	Integrate ideas from various domains and implement them using blockchain technology indifferent perspectives.	K3			
CO5	Understand key terminologies and Develop Blockchain hyper ledger fabric.	K6

B. TECH THIRD YEAR

Course code | ACSE0603 LTP Credits SOFTWARE ENGINEERING **Course title** 3 0 0 3

Course objective:

"To teach the students all phases of the Software Development Life Cycle(SDLC) and their role in software development through theory as well as practice." Students will be able to apply the scientific knowledge in systematic

Pre-requisites: Basic knowledge about software and its types. Basic knowledge of OOPs concepts.

Course Contents / Syllabus

UNIT-I **INTRODUCTION** Introduction: Evolving role of software, Software Characteristics, Software crisis, Silver bullet, Software myths, Software Engineering Phases, Team Software Process (TSP), emergence of software engineering, Software process, project and product, Software Process Models: Waterfall Model, Prototype Model, Spiral Model, Iterative Model, Incremental Model, Agile Methodology: Scrum Sprint, Scrum Team, Scrum Master, Product Owner.

UNIT-II SOFTWARE REQUIREMENT **8 Hours** Software Requirement Specifications (SRS): Requirement Engineering Process: Elicitation, Analysis, Documentation, Review and Management of User Needs, Feasibility Study, Information Modelling, Use Case Diagram, Data Flow Diagrams, Entity Relationship Diagrams, Decision Tables, SRS Document, IEEE Standards for SRS. Software Quality Assurance (SQA): Quality concepts, SQA activities, Formal approaches to SQA; Statistical software quality assurance; CMM, The ISO standard.

SOFTWARE DESIGN UNIT-III

Software Design: Design principles, the design process; Design concepts: refinement, modularity: Cohesion, Coupling, Effective modular design: Functional independence, Design Heuristics for effective modularity, Software architecture: Function Oriented Design, Object Oriented Design: OOPs concepts-Abstraction, object, classification, inheritance, encapsulation, UML Diagrams-Class Diagram, Interaction diagram, Activity Diagram, control hierarchy: Top-Down and Bottom-Up Design, structural partitioning, software procedure.

UNIT-IV SOFTWARE TESTING

Software Testing: Testing Objectives, 7 Principals of Testing, Levels of Testing: Unit Testing, System Testing, Integration Testing, User Acceptance Testing, Regression Testing, Testing for Functionality and Testing for Performance, Top Down and Bottom-Up Testing Strategies: Test Drivers and Test Stubs, Structural Testing (White Box Testing), Functional Testing (Black Box Testing), Test Data Suit Preparation, Alpha and Beta Testing of Products. Functional Testing(DAO, BO) Static Testing Strategies: Formal Technical Reviews (Peer Reviews), Walk Through, Code Inspection, Compliance with Design and Coding Standards.

UNIT-V **PROJECT MAINTENANCE AND MANAGEMENT CONCEPTS** 8 Hours

Project management concepts, Planning the software project, Estimation: Software Measurement and Metrics, Various Size Oriented Measures-LOC based, FP based, Halestead's Software Science, Cyclomatic Complexity Measures: Control Flow Graphs, Use-case based, empirical estimation COCOMO- A Heuristic estimation techniques, staffing level estimation, team structures, risk analysis and management. Configuration Management, Software reengineering: reverse engineering, restructuring: forward engineering, Clean Room software engineering. Case Tools, Software Maintenance: Preventive, Corrective and Perfective Maintenance, Cost of Maintenance, Need of Maintenance.

Course outcome: After completion of this course students will be able to

way to create and build cost effective software solutions.

8 Hours

8 Hours

8 Hours

CO 1	Identify, formulate, analyse, and solve problems, as well as identify the	K2, K4, K5
	computing requirements appropriate to their solutions. The ability to work	
	in one or more significant application domains	
CO 2	Design, implement, and evaluate software-based systems, components, or programs of varying complexity that meet desired needs, satisfy realistic	K2, K3, K4, K6
	constraints, and demonstrate accepted design and development principles.	
CO 3	Apply knowledge of computing, mathematics, science, and engineering	K3, K4
05	appropriate to the discipline, particularly in the modelling and design of	KJ, K4
	software systems and in the analysis of trade-offs inherent in design	
	decisions.	
CO 4	Formulate testing strategies for software system, apply various testing	К3
	techniques such as unit testing, test driven development and functional	
	testing.	
CO 5	Understand ability to engage in life-long maintenance and continuing	K2, K5
	Software development using various software management tools.

B. TECH THIRD YEAR (ELECTIVE-IV)						
Course code	ACSE0613	L	Т	Р	Credits	
Course Title	ROBOTICS PROCESS AUTOMATION (RPA)	3	0	0	3	

Course objective: This course focus on The Robotic Process Automation (RPA) specialization offers comprehensive knowledge and professional-level skills focused on developing and deploying software robots. It starts with the basic concepts of Robotic Process Automation. It builds on these concepts and introduces key RPA Design and Development strategies and methodologies, specifically in the context of UiPath products. A student undergoing the course shall develop the competence to design and develop automation solutions for business processes.

Pre-requisites: Computer Organization and Architecture

Course Contents / Syllabus

UNIT-I PROGRAMMING BASICS & RECAP

PROGRAMMING BASICS &RECAP: Programming Concepts Basics - Understanding the application - Basic Web Concepts - Protocols - Email Clients -. Data Structures - Data Tables - Algorithms - Software Processes -Software Design - Scripting - .Net Framework - .Net Fundamentals - XML - Control structures and functions -XML - HTML - CSS - Variables & Arguments.

UNIT-II RPA Concepts

RPA Concepts: RPA Basics - History of Automation - What is RPA - RPA vs Automation - Processes & Flowcharts - Programming Constructs in RPA - What Processes can be Automated - Types of Bots - Workloads which can be automated - RPA Advanced Concepts - Standardization of processes - RPA Development methodologies -Difference from SDLC - Robotic control flow architecture - RPA business case - RPA Team - Process Design Document/Solution Design Document - Industries best suited for RPA - Risks & Challenges with RPA - RPA and emerging ecosystem

UNIT-III RPA TOOL INTRODUCTION & BASICS

RPA TOOL INTRODUCTION &BASICS: Introduction to RPA Tool - The User Interface - Variables - Managing Variables - Naming Best Practices - The Variables Panel - Generic Value Variables - Text Variables - True or False Variables - Number Variables - Array Variables - Date and Time Variables - Data Table Variables -Managing Arguments - Naming Best Practices - The Arguments Panel - Using Arguments - About Imported Namespaces - Importing New Namespaces Control Flow - Control Flow Introduction - If Else Statements - Loops - Advanced Control Flow - Sequences - Flowcharts - About Control Flow - Control Flow Activities - The Assign Activity - The Delay Activity - The Do While Activity - The If Activity - The Switch Activity - The While Activity - The For Each Activity - The Break Activity - Data Manipulation - Data Manipulation Introduction - Scalar variables, collections and Tables - Text Manipulation - Data Manipulation - Gathering and Assembling Data

UNIT-IV

ADVANCED AUTOMATION CONCEPTS AND TECHNIQUES

8 Hours

8 Hours

8 Hours

8 Hours

ADVANCED AUTOMATION CONCEPTS AND TECHNIQUES : Recording and Advanced UI Interaction-Recording Introduction-Basic and Desktop Recording-Web Recording - Input/output Methods - Screen Scraping-Data Scraping - Scraping advanced techniques - Selectors - Selectors - Defining and Assessing Selectors -Customization - Debugging - Dynamic Selectors - Partial Selectors - RPA Challenge - Image, Text & Advanced Citrix Automation - Introduction to Image & Text Automation - Image based automation - Keyboard based automation - Information Retrieval - Advanced Citrix Automation challenges - Best Practices - Using tab for Images - Starting Apps - Excel Data Tables & PDF - Data Tables in RPA - Excel and Data Table basics - Data Manipulation in excel - Extracting Data from PDF - Extracting a single piece of data - Anchors - Using anchors in PDF

UNIT-V EMAIL AUTOMATION & EXCEPTIONAL

8 Hours

EMAIL AUTOMATION & EXCEPTIONAL: Email Automation - Email Automation - Incoming Email automation - Sending Email, automation - Debugging and Exception Handling - Debugging Tools - Strategies for solving issues - Catching errors.

COURSE OUTCOMES: After completion of this course students will be able to CO 1 Understand RPA principles, its features and applications K3 CO 2 Demonstrate proficiency in handling several types of variables inside a workflow K3 and data manipulation techniques CO 3 Gain insights into Desktop, Web, Citrix, Email Automation and exception handling. K2 Analyze and design a real-world automation project and debug the workflows. CO 4 K2 CO5 K2 Student will be able to understand architecture of computing technology.

	B.TECH. THIRD YEAR (ELECTIVE-I	II)			
Course code	ACSAI0617	L	T	Р	Credits
Course title	PROGRAMMING FOR DATA ANALYTICS	3	0	0	3
Apply principles	ve: Demonstrate knowledge of statistical data analysis techniques utilize of Data Science to the analysis of business problems. Use data mining y cutting edge tools and technologies to analyze Big Data.				•
Pre-requisites:	Basic Knowledge of Python and R				
	Course Contents / Syllabus				
UNIT-I	BASIC DATA ANALYSIS USING PYTHON/R				8 Hours
Mathematical C	ructures – Series and Data Frame, Data wrangling using pane omputing Using NumPy, Data visualization with Python Descripti Model Building, Probability and Hypothesis Testing, Sensitivity Anal	ve a	and	Inferen	ntial Statistics,
UNIT-II	R GRAPHICAL USER INTERFACES				8 Hours
Processing Data	ns, Data Objects-Data Types & Data Structure, Structure of Da in R using Dplyr package & Stringr package, Building R Packages import and export, attribute and data types, descriptive statistics and R-shiny.	s, R1	unn	ing and	Manipulating
UNIT-III	DATA ENGINEERING FOUNDATION				8 Hours
_	database (sqlite) using Python, Sending DML and DDL queries and , Handling error, NOSQL query using MongoDB, MongoDB Comp	-		sing the	e result from a
UNIT-IV	INTRODUCTION TO TENSOR FLOW AND AI				8 Hours
Basics, Convolution Word Vectors,	ing TensorFlow for AI Systems, Up and Running with TensorFlow ational Neural Networks, Working with Text and Sequences, and Advanced RNN, and Embedding Visualization. TensorFlow Abstr s, and Reading Data, Distributed TensorFlow, Exporting and Serving	Teı acti	nso ons	rBoard and S	Visualization, implifications,
UNIT-V	DEEP LEARNING WITH KERAS				8 Hours
Networks (GAI	vanced Deep Learning with Keras, Deep Neural Networks, Autoenco Ns), Improved GANs, Disentangled Representation GANs, Cross- VAEs), Deep Reinforcement Learning, Policy Gradient Methods.				
Course outcom	e: After completion of this course students will be able to:				

	Install, Code and Use Python & R Programming Language in R Studio IDE to perform basic tasks on Vectors, Matrices and Data frames.	K1
CO2	Implement the concept of the R packages.	К3
CO3	Understand the basic concept of the MongoDB.	K2
CO4	Understand and apply the concept of the RNN and tensorflow.	K4
CO5	Understand and evaluate the concept of the keras in deep learning.	K4

Course objective: To understand text mining and social media data analytic activities and apply the complexities of processing text and network data from different data sources.					
Pre-requisites: Python/R.					
	Course Contents / Syllabus				
UNIT-I	SENTIMENT MINING	8 HOURS			
Overview: Te	ext and Sentiment Mining, Semantic Analysis Applications, Sentiment An				
Speech Analy	ytics, Text Representation- tokenization, stemming, stop words, TF-IDF,	Feature Vector			
Representatio	n, Named Entity Recognition (NER), N-gram modelling, Text Clustering, Text	t Classification,			
Topic Model	ling-LDA, HDP. Sentiment Classification, feature based opinion mining	g, comparative			
sentence, and	relational mining, Opinion Summarization, Opinion spam detection.				
UNIT-II	WEB-MINING	8 HOURS			
Web Mining	Overview, Web Structure Mining, Search Engine, Web Analytics, Machin	e Learning for			
extracting kno	owledge from the web, Inverted indices and Boolean queries. PLSI, Query opti	mization, SEO,			
page ranking,	, social graphs (Interaction, Latent and Following Graphs), Ethics of Scraph	ing, Static data			
extraction and	l Web Scraping using Python.				
UNIT-III	MINING SOCIAL MEDIA	8 HOURS			
Introduction t	o Social Media Mining, Challenges in Social Media Mining, Process of Social	media mining,			
Essentials of	social graphs and its types, Social Networks Measures, Network Model	ls, Information			
Diffusion in	social media, Behavioral Analytics, Influence and Homophily, Recommend	lation in social			
media.	media.				
UNIT-IV	TEXT SUMMARIZATION	8 HOURS			
Introduction to Text Summarization, Text extraction, classification and clustering, Anomaly and Trend					
Detection, Text Processing, N-gram Frequency Count and Phrase Mining, Page Rank and Text Rank					
Algorithm, LDA Topic Modelling, Machine-Learned Classification and Semantic Topic Tagging, Python					
libraries for Text Summarization. (NumPy, Pandas, Ntlk, Matplotlib).					
UNIT-V	RECENT TRENDS	8 HOURS			
E-Commerce,	is, Types of trend analysis, Recent Trends in Text, Data Localization Role of Social Media Analytics, Social media analytics tools. Eacebook Insights Using Python Sentiment and Text Mining of Twitter data	C			

B. TECH THIRD YEAR

ACSAI0622N

SOCIAL MEDIA ANALYTICS

Credits

3

LTP

3 0 0

Case Studies: Facebook Insights Using Python, Sentiment and Text Mining of Twitter data and Google analytics.

Course outcome: After completion of this course students will be able to Apply state of the art mining tools and libraries on realistic data sets as a basis CO 1 K3 for business decisions and applications. Apply a wide range of classification, clustering, estimation and prediction CO 2 K3 algorithms on web data. Implement social network analysis to identify important social actors, subgroups CO 3 K3 and network properties in social media sites.

CO 4	Interpret the terminologies, metaphors and perspectives of text summarization.	K3			
CO 5	Design new solutions to opinion extraction, sentiment classification and data summarization problems.

	B. TECH THIRD YEAR (ELECTIVE IV)	
Course Code	ACSE0614 L T P	Credits
Course Title	WEB DEVELOPMENT USING MEAN STACK30	3
Students examine	ve: es on how to design and build static as well as dynamic webpages and interactive ve advanced topics like Angular, nodejs, Mongodb and Express framework for use rich user interfaces.	
11		
rre-requisites:	Basic knowledge of HTML, CSS and ES6 required.	
UNIT-I	Course Contents / Syllabus Introduction to Nodejs	8 Hours
	Node in-built packages (buffer, fs, http, os, path, util, url) Node.js modules, File	
REST API's(GET engine (EJS).	rver and Client, Error handling with appropriate HTTP, Callback function, asynchro , POST PUT, DELETE UPDATE), GraphQL, Promises, Promise Chaining, Introdu	ction to template
UNIT-II	Express Framework	8 Hours
• • •	ess, Postman configuration, Environment Variables, Routing, Defining pug template	
of Express, URL	binding, middleware function, Serving static files, Express sessions, REST full Al	PI's, FORM data
in Express, docun	nent modeling with Mongoose.	
UNIT-III	Basics of Angular js	8 Hours
Typescript, Setup	and installation, Power of Types, Functions, Function as types Optional and de	fault parameters,
Arrow functions,	Function overloading, Access modifiers, Getters and setters, Read-only & static,	Abstract classes,
Interfaces, Extend	ing and Implementing Interface, Import and Export modules.	
UNIT-IV	Building Single Page App with Angular js	8 Hours
MVC Architectur	e, One-way and Two-way data binding, AngularJS Expressions, AngularJS Contro	ollers, AngularJS
Modules, adding	controller to a module, Component, Dependency Injection, Filters, Tables, Angu	larJS Forms and
Forms validation,	Select using ng-option, AngularJS AJAX.	
UNIT-V	Connecting Angular js with MongoDB	8 Hours
Environment Setu	p of Mongodb, data modeling, The current SQL/NoSQL landscape, Create collect	ion in Mongodb,
CRUD Operation	s in MongoDB. Mongo's feature set, Introduction to Mongoose, understanding monnecting Angular with mongoDB using API.	-
Course outcon	ne: After completion of this course students will be able to	
CO 1	Explain, analyze and apply the role of server-side scripting language like Nodej in the workings of the web and web applications.	⁶ K2, K3
CO 2	Demonstrate web application framework i.e., Express is to design and implemen typical dynamic web pages and interactive web based applications.	t K3, K6
CO 3	Apply the knowledge of Typescript that are vital in understanding angular is, and analyze the concepts, principles and methods in current client-side technology to implement angular application over the web.	
CO 4	Analyze build and develop single page application using client-side programming i.e. angular js and also develop a static web application.	g K3, K4

	70.5	Understand the impact of web designing by database connectivity with Mongodb
C	CO 5	in the current market place where everyone use to prefer electronic medium for K2, K3
		shoping, commerce, and even social life also.

Course code	ACSAI0620	LTP	Credits
Course title	AUGMENTED REALITY AND VIRTUAL	3 0 0	3
	REALITY		

Course objective: The objective of this course is to understand the basics of AR and VR. It will focus on understanding Unreal Engine. The course will cover the top platform for game development and the creation of cutting-edge real-time 3D environments. It will explore the understanding of essential tools driving important fields like VR/AR, training, and architectural visualization.

Pre-requisites: None

Course Contents / Syllabus

UNIT-I INTRODUCTION TO VIRTUAL REALITY & AUGMENTED REALITY

8 Hours

Introduction to Virtual Reality & Augmented Reality. Difference between VR and AR, History of VR.

Learn the basics - The differences between VR&AVR. Why are these technologies so popular now?, key players in this space, Popular VR & AR Devices? How do we create VR/AR experiences, Benefits of VR-AR, Challenges in VR, AR, and Careers related to VR, AR.

Platforms and Paradigms: VR-AR Developer Platforms -Demystifying the jargons- FOV- Degrees of freedom VR, Sensors required for VR devices, Evolution of VR-AR, Learn about the Multidisciplinary stream that combines various techniques to create VR-AR experiences, World of 360° videos.

UNIT-II VR-AR TECHNOLOGY COMPONENTS, APPLICATIONS

8 Hours

8 Hours

Principles of AR/VR - Immersion, Teleportation, Interaction, Sensors, Haptics, 360-degree view, Motion & Orientation, Accelerometer, Gyroscope, Magnetometer, Depth sensing, Azure Kinect; Challenges – Realistic sense, Nausea, Depth, Non interfering sensors, Ergonomics.

Introduction to Headsets and SW tools required to create VR-AR applications. Basic steps required to create VR-AR experience.

AR, VR Applications, Platforms, Devices – HMD, Smart Glasses, Smart Phone based systems; Intro to Vuforia ; Examples - Gaming, Manufacturing, Oil & Gas, E-Commerce, Entertainment, Facebook, Snapchat, Instagram filters and much more, Education, Training (VMT, Disti), Medical, Fundamental surgery, Military

UNIT-IIIUNREAL BASICS, MESH TYPES, INPUTS AND COLLISIONS IN
UNREAL ENGINE8 Hours

Installing Unreal Engine & Account Setup, Unreal Engine Overview and Resources, Editor Interface Overview, Templates & Creating Your First Project, View Modes & Navigation Basics.

Mesh Types, Inputs, and Collisions in Unreal Engine: Importing Meshes Collisions, Mesh Editor & Mesh Types, Greyboxing, Static Mesh vs. Skeletal Meshes and Other Mesh Import Types, Brief Blueprint Basics, View Modes, Snapping, and Hotkeys, Skydomes, Lights (Overview) & Rendering Quality, Rendering & Performance Basics.

UNIT-IV | Lighting and Materials in Unreal

Lighting Overview: Science, Optimization & Measurement, Lighting Design & Terminology, Setting Up Your Scene to Light, Light Types, Use Cases: Static, Stationary & Moveable, Lights Baking Lighting & Lightmap Resolution, Real Time Lighting & Shadows, Lighting Effects: IES / Light Rays / Volumetrics. External: Sun & Sky Actor Location & Time of Day. The Road to Real-Time Raytracing.

Materials in Unreal: Materials Overview, Creating Your First Material, Shading Models, Masks Material Expressions Textures: Texture Map Types. Instances & Master Materials. Material: Parameters & Blueprints, Non-UV Based Material Tools External: Quixel, Substance Designer Workflows. Profiling & Baking Down.

Physics Content Examples. Physics Bodies: Mass, Gravity. Physics Forces: Motors, Forces, Constraints. Physics Volumes Collisions & Complexity. Introduction to Skeletal Physics & Rag Dolls. PPVs Key Settings, Lens & Film Effects, Tone Mapping, LUTs, Materials for UI, Rendering & Stylization. Visual FX Use Cases & Visual Warping Example.

CO 1	Analyze various requirements and capabilities of modern augmented and virtual reality systems.	K4
CO 2	Describe augmented and virtual reality applications to suit a wide variety of needs.	K2
CO 3	Describe the capabilities and limitations of the techniques that make virtual and augmented reality possible.	K2
CO4	Identify audit and logging needs in application development, Describe the background of augmented and virtual reality and apply counter measures.	K1
CO 5	Demonstrate and use emerging technologies and tools for Augmented and Virtual reality analysis to provide the best Application.	K3

Textbooks:

Intellectual Property Laws: Introduction, Legal Aspects of Patents, Filing of Patent Applications, Rights from						
Patents, Infringement of Patents, Copyright and its Ownership, Infringement of Copyright, Civil Remedies for						
Infringement, Regulation to Information, Introduction, Right to Information Act, 2005, Information Technology						
Act, 2000, Electronic Governance, Secure Electronic Records and Digital Signatures, Digital Signature Certificates,						
Cyber Regulations Appellate Tribunal, Offences, Limitations of the Information Technology Act.						

UNIT-V BUSINESS ORGANIZATIONS AND E-GOVERNANCE	UNIT-V	BUSINESS ORGANIZATIONS AND E-GOVERNANCE
------------------------------------------------	--------	-----------------------------------------

8 Hours

Sole Traders, Partnerships: Companies: The Company's Act: Introduction, Formation of a Company, Memorandum of Association, Articles of Association, Prospectus, Shares, Directors, General Meetings and Proceedings, Auditor, Winding up. E-Governance and role of engineers in E-Governance, Need for reformed engineering serving at the Union and State level, Role of I.T. professionals in Judiciary, Problem of Alienation and Secessionism in few states creating hurdles in Industrial development.

COURSE OUTCOMES: After completion of this course students will be able to

	•	
CO 1	Identify and explore the basic features and modalities about Indian constitution.	K1
CO 2	Differentiate and relate the functioning of Indian parliamentary system at the center and state level.	K2
CO 3	Differentiate different aspects of Indian Legal System and its related bodies.	K4
CO 4	Discover and apply different laws and regulations related to engineering practices.	K4
CO 5	Correlate role of engineers with different organizations and governance models	K4
