List of Open Elective Subjects

Sr. No	Subject Code	Name of open Elective Subjects	Subject offered to Program	Semester
1	AOE0661	Introduction To Bio Informatics	ALL the Programs Except BT	6
2	AOE0662	Data Structures	EC, ME,BT	6
3	AOE0663	Artificial Intelligence	ME, BT	6
4	AOE0664	Introduction to DATA Analytics	EC, ME,BT	6
5	AOE0665	Soft Skills & Personality Development	ALL the Programs	6
6	AOE0666	3-D Printing& Design	ALL the Programs Except ME	6
7	AOE0667	Digital Marketing	ALL the Programs	6

		B.TECH THIRD YEAR (VI SEMEST)	ER)	
Cour	se Code	AOE0661	LTP	Credits
Cour	se Title	Introduction to Bioinformatics	300	3
Cour	<u> </u>		200	
Course	e objective:			
1		basic concept of Bioinformatics, databases and sequence	e analysis.	K1
2	To develop	understanding of sequence analysis.	·	K1, K2
3	To provide l	knowledge of scoring matrix and detection of functional	sites etc.	K1, K2
4	To impart k	nowledge related to phylogenetic analysis.		K2, K3
5	To learn the	protein structure prediction and application of bioinform	natics in	K3, K4
	drug designi			
	-	mentary knowledge of Molecular Biology, Mathemati	ics and Com	puter
Course	e Contents / S	Syllabus	1	
UNIT	Γ-Ι	Introduction to Bioinformatics	101	1
Biolog	gical database	s: Nucleotide databases, Protein databases, Specialized d	latabases; La	oratory data
submis	sion and data	retrieval; Various file formats for Biomolecular sequence	ces: Genbank	, EMBL,
		F, NBRF-PIR etc.; Basic concepts of sequence similarity	: identity and	homology,
definiti	ons of homol	ogues, orthologues, paralogues.		
UNIT	Γ -II	Sequence Alignment and Database	8h	
		Searching		
Introdu	ction, Evolut	ionary Basis of Sequence Alignment, Optimal alignment	t method. Sta	tistical
		nment. Database searching Artifacts; Database similarity

B.TECH THIRD YEAR (VI SEMESTER)			
Course Code	AOE0662	LTP	Credits
Course Title	Data Structures	3 0 0	3

Course Objectives:

This course focuses on the basic concepts of algorithm analysis, along with implementation of linear and non-linear data structures, hashing and file structures.

Pre-requisites: Basics of C/Python programming, Identifiers, Constants, Operators, Conditional statements, Switch-case statements, Iterative statements, Functions, Structures.

Course Contents / Syllabus

UNIT-I	Introduction to data structures, Arrays and	8 Hours
	Linked lists.	

Introduction: Basic Terminology, Elementary Data Organization, Built in Data Types in C/python. Algorithm, Efficiency of an Algorithm, Time and Space Complexity, Asymptotic notations: Big Oh, Big Theta and Big Omega, Abstract Data Types (ADT)

Arrays: Single and Multidimensional Arrays, Representation of Arrays: Row Major Order, and Column Major Order, Index Formulae for 1-D,2-D,3-D and n-D Array Application of arrays, Sparse Matrices and their representations.

Linked lists: Array Implementation of Singly Linked Lists, Doubly Linked List, Circularly Linked List, Operations on a Linked List. Insertion, Deletion, Traversal. Polynomial Representation and Addition Subtraction & Multiplications of Single variable.

UNIT-II Stacks and Queues

8 Hours

Stacks: Abstract Data Type, Primitive Stack operations: Push & Pop, Array and Linked Implementation of Stack, Application of stack: Prefix and Postfix Expressions, Evaluation of postfix expression, Iteration and Recursion- Principles of recursion, Tail recursion, Removal of recursion Problem solving using iteration and recursion with examples of binary search, Fibonacci numbers, and Hanoi towers. Tradeoffs between iteration and recursion.

Queues: Operations on Queue: Create, Add, Delete, Full and Empty, Circular queues, Dequeue and Priority Queue.

UNIT-III Trees

8 Hours

Basic terminology used with Tree, Binary Trees, Binary Tree Representation: Array Representation and Pointer (Linked List) Representation, Binary Search Tree, Strictly Binary Tree, Complete Binary Tree, An Extended Binary Trees. Tree Traversal algorithms: In-order, Pre-order and Post-order. Constructing Binary Tree from given Tree Traversal, Operation of Insertion, Deletion, Searching & Modification of data in Binary Search tree, Introduction of Binary Heaps, Threaded Binary trees, Traversing Threaded Binary trees, AVL Tree, B-Tree.

UNIT-IV Graphs

8 Hours

Graphs: Terminology used with Graph, Data Structure for Graph Representations: Adjacency matrices, Adjacency List. Graph Traversal: Depth First Search and Breadth First Search. Connected Component, Spanning Trees, Minimum Cost Spanning Trees: Prim's and Kruskal's algorithm. Shortest Path algorithms: Dijkstra Algorithm.

UNIT-V Searching, Sorting and File Structure

8 Hours

Searching: Concept of Searching, Sequential search, Index Sequential Search, Binary Search. Concept of Hashing.

Sorting: Insertion Sort, Selection, Bubble Sort, Quick Sort, Merge Sort, Heap Sort and Radix Sort.

File Structure: Concepts of files, records and files, Sequential, Indexed and Random File

Organization, indexing structure for index files, multi-Key file organization and Access Methods.

Course outcome: After completion of this course, students will be able to		
CO 1	Describe how arrays, linked lists, stacks, queues, trees, and graphs are represented in memory, used by the algorithms and their common applications.	K1, K2
CO 2	Discuss the computational efficiency of the sorting and searching algorithms.	K2
CO 3	Implementation of Trees and Graphs and perform various operations on these data structure.	К3
CO 4	Understanding the concept of recursion, application of recursion and its implementation and removal of recursion.	K4
CO 5 Identify the alternative implementations of data structures with respect to its performance to solve a real-world problem. K5, K6

B.TECH THIRD YEAR (VI SEMESTER)				
Course Code	AOE0663	LT	P	Credits
Course Title	ARTIFICIAL INTELLIGENCE	3 0	0	3

Course objective: Introductory knowledge of the historical perspective of AI and its foundations and familiarity with principles of AI toward problem solving inference, perception, knowledge representation, and learning. Acquiring the knowledge of various forms of learning and computation statistics.

Pre-requisites: Basic Knowledge of Transform techniques

Course Contents / Syllabus

UNIT-I INTRODUCTION

8 Hours

Introduction to Artificial Intelligence, Historical developments of Artificial Intelligence, Intelligent Agents, Structure of Intelligent Agents, Virtual Agents, Multi-agent systems, Basics of problem-solving: problem representation paradigms, state space, Problem reduction, Constraint satisfaction, Applications of AI

UNIT-II SEARCH TECHNIQUES

8 Hours

Searching for solutions, Uninformed Search Strategies: DFS, BFS, adversarial Search, Search for games, minimax, Alpha-Beta pruning, Heuristic Search techniques, Hill Climbing, Best-first search, Means Ends Analysis, Iterative deepening Heuristic Search and A*.

UNIT-III LOGIC AND KNOWLEDGE REPRESENTATION

8 Hours

Introduction of Logic, Propositional Logic Concepts, Semantic Tableaux and Resolution in Propositional logic, FOPL, Semantic Tableaux and Resolution in FOPL, Logic Programming in Prolog. Production systems and rules for some AI problems: Water Jug Problem, Missionaries-Cannibals Problem, Salesman Problem. Knowledge representation, semantic nets, partitioned nets, Frames, Common Sense reasoning, and thematic role frames.

UNIT-IV EXPERT SYSTEM

8 Hours

Architecture of knowledge-Based Systems, Rule-based systems, Forward and Backward Chaining, Frame-Based systems. Architecture of Expert System, Agents, and Environment, Forward & Backward chaining, Resolution, Probabilistic reasoning, Bayesian Networks, Dempster Shafer Theory.

UNIT-V PLANNING & LEARNING

8 Hours

Planning with state Space Search, Conditional Planning, Continuous planning, Multi-Agent Planning, Forms of learning, inductive learning, well-defined learning problems, Designing a Learning System, Case Study: Health Care, E-Commerce, Smart Cities.

Course outcome: After completion of this course students will be able to:

CO 1	After completion of this course students will be able to Understand fundamental understanding of the history of artificial intelligence (AI) and its foundations	K2
CO 2	Apply principles of AI in solutions that require problem solving, inference and perception.	K3
CO 3	Explain strong familiarity with a number of important AI techniques, including in particular intelligent search methods and solutions	K2

CO4	Apply the concepts of knowledge & reasoning of predicate logic and represent	К3
	knowledge using rules, Probabilistic reasoning	
CO 5	Assess/ Evaluate critically the techniques presented and apply them to real-	K5
	world problems

	B.TECH THIRD YEAR (VI SEMESTER)				
Course code	AOE0664 I		T	P	Credits
Course title	INTRODUCTION OF DATA ANALYTICS 3	3	0	0	3
analytics, learn	tive: The objective of this course is to understand the fundamental concabout various types of data formats and its manipulations. It helps student analysis and visualization techniques in addition to R/Python/Tableau p	ıts	to	lear	n
Pre-requisite	S: Basic Knowledge of Statistics and Probability.				
	Course Contents / Syllabus				
UNIT-I	INTRODUCTION TO DATA SCIENCE				8 Hours
	Data Science, Need for Data Science, the 5 V's, Evolution of Data Science of Data Analysis, Data Science Tools and technologies, Applications of Data Analysis, Data Science Tools and technologies, Applications of Data Analysis, Data Science Tools and technologies, Applications of Data Science Tools and Data				
UNIT-II	DATA HANDLING				8 Hours
Dimensional Da Classification, S	structured, semi-structured, unstructured data, Numeric, Categorical, Grata, Transactional Data, Spatial Data, Social Network Data, standard data ources of Data, Data manipulation in various formats, import and export	ise	ts,	Data	a R/Python.
UNIT-III	DATA PRE-PROCESSING				8 Hours
Discretization, I Dimensional Re	- missing values, noisy data; Data Transformation: -Normalization, Attri- Hierarchy Generation; Data Reduction: - Attribute Subset Selection, Nun- duction, Exploratory Data Analysis techniques, Concept of data mungin are generation and Feature selection algorithms.	ne	ros	ity a	nd
UNIT-IV	DATA VISUALIZATION				8 Hours
Data visualization Tableau: Getting	importance of Data Visualization, Benefits, Idea and tools; Types of Data visual, Data visualization using Python/R, Creating Dashboards & Stories started with Tableau Software, Using Data file formats, connecting your Data t bar charts, Tree maps).				
UNIT-V	APPLICATION				8 Hour
* *	ta Science, Data Science and Ethical Issues-Discussion on privacy, security, Etgeneration data scientists. Case Study of Data science-Facebook, uber and Amaz			A loc	k back at
Course outco	ome: After completion of this course students will be able to:				
CO 1	Understand the fundamental concepts of data analytics in the areas that plays major role within the realm of data science.				K1
CO 2	Explain and exemplify the most common forms of data and its				K2

representations.

CO 3

Understand and apply data pre-processing techniques.

K3

CO4	Illustrate various visualization methods for different types of data sets and application scenarios.	K3
CO 5	Understand application and ethics of Data Science	К3

	B.TECH THIRD YEAR (VI SI	EMESTER)		
Course Code	AOE0665	L	T	P	Credit
Course Title	Soft-Skills and Personality Developmen		0	0	3
Course objectiv		<u> </u>			3
	 To develop oral communication skills in p 	professionals a	nd le	eaders	
	 To follow best practices of public speaking 		ina re	auci	
	 To revisit technical writing and reading 	5 III Tear IIIe			
	• To learn to listen actively				
	• To develop essential corporate soft-skills				
Pre-requisites:	1				
-	ent must understandEnglish language&communi	cation skills.			
	ent must have completed all units from Semester		ter 4.		
	1				
	Course Content / Syllabi	ıs			
UNIT-I	Speaking in Public				7 Hours
	icating effectively				
	specific terms				
 Oral pres 	entations – Individual				
 Spontane 	eous speaking in different professional situations				
 Group di 	scussion - brainstorming				
UNIT-II	Effective use of Non-Verbal Communic	ation Skills			3 Hour
 Principle 	s of non-verbal communication				
 Appearar 	nce & body language: posture, gesture, eye conta	ct, facial expr	essic	n etc	
	e vs Aggressive Style	•			
	uage: Intonation, Voice-Modulation, Pacing & P	ausing			
UNIT-III	Art of Fearless Interviewing	<u> </u>			10 Hour
Job Inter				ı	
	esume/CV based interviews				
	WOT Analysis				
	raming objectives				
	s in different situations				
o T	elephonic interviews				
	online Interviews				
	rining Interviews				
Appraisa	l Interviews & Exit Interviews				
UNIT-IV	Revisiting Technical Writing & Listeni	ng			5 Hour
	Comprehension				
Writing 6	e-mails				
Writing (Good News & Bad News Messages				
_	ng Active Listening				
-	Listening to understand the gist & detailed inform	mation			
UNIT-V	Introduction to Soft-Skills				5 Hour
•					
General e	etiquette			1	
	ubicle etiquette				
0 C	Sobile etiquette				
	iodic chiquette				
o M	<u>-</u>				
o M o W	Vorkplace etiquette t aspects of personality				

- Time management
- Realising strengths and limitations

Course outcome:

At the end of the course the students will be able toLevels

CO 1	Acquire the skills necessary to deliver effective presentations with clarity and impact.	L3
CO 2	Understand the importance of body language and tone of voice to enhance speaking skills.	L2
CO 3	Apply interview skills to enhance performance during job interviews.	L3
CO 4	Demonstrateactive listening, reading comprehension, and the ability to write clear and well-structured professional documents.	L3
CO 5	Imbibe the important elements of soft-skills.	L5

B.TECH THIRD YEAR (VI SEMESTER)					
Course Code AOE0666 L T					
Course Title		3D Printing and Design 3		0 0	
Course	objective:		•		
1		nd the Fundamentals of various Rapid Prototyping gies for Application to various Industrial needs		K1,K2	
2		Able to convert part file into STL format & Generating STL file from various Sources and Further Process K3, K4			
3		Able to understand the method of Manufacturing of Liquid Based, Powder Based and Solid Based RP Techniques K3			
4		Understand the Manufacturing procedure of a Prototype using FDM, SLA Techniques			
5	Understar Techniqu	nd the broad aspects of Rapid Prototyping and Interconn Interdisciplinary Applications & es	ected &	K4, K5	

Pre-requisites:

Basic knowledge of manufacturing system and polymers

Course Contents / Syllabus

UNIT-I Introduction 6 hours

Prototyping Fundamentals, Historical Development, Advantages of RP, Commonly Used Terms, 3D Modeling, 3D Scanning, Data Conversion and Transmission, Checking, Repairing and Preparing (Slicing), Preprocessing, Building, Post Processing, RP Data Formats, Classification of RP Process with Different Aspects, Applications & Limitations

UNIT-II Liquid Based RP Systems

10 hours

Stereo Lithography Apparatus (**SLA**): Models and Specifications, Process, Working Principle, Photopolymers, Photo Polymerization, Light Sources, Industrial Applications, Advantages and Disadvantages, case studies, Practical Demonstration. **Solid Ground Curing (SGC):** Models and Specifications, Process, Working, Principle, Industrial Applications, Advantages and Disadvantages. **PolyJet:** Models and Specifications, Process, Working, Principle, Industrial Applications, Advantages and Disadvantages and case studies.

UNIT-III Solid Based RP Systems

10 hours

Laminated Object Manufacturing (LOM): Models and Specifications, Process, Working Principle, Industrial Applications, Advantages and Disadvantages, Case Studies. Ultrasonic Consolidation: Models and Specifications, Process, Working Principle, Industrial Applications, Advantages and Disadvantages, Case Studies. Fused Deposition Modeling (FDM): Models and Specifications, Process, Working Principle, Industrial Applications, AdvantagesandDisadvantages, CaseStudies, PracticalDemonstration. SolidBasedRP Systems, Materials and Parameters.

UNIT-IV Powder Based RP Systems

10 hours

Selective Laser Sintering (SLS): Models and Specifications, Process, Working Principle, Industrial Applications, Advantages and Disadvantages, Case Studies. Binder Jetting: Models and Specification, Process, Working Principle, Industrial Applications, Advantages

and Disadvantages, Case Studies. Inkjet Fusion: Models and Specification, Process,

Working Principle, Industrial Applications, Advantages and Disadvantages, caseStudies. Powder Materials for Powder Based RP Systems **UNIT-V Advancement in RP Technology** 8 hours Composite 3D Printing: Models and Specifications, Process, Working Principle, Applications, Advantages and Disadvantages, Case Studies, Materials, Practical Demonstration. Interdisciplinary Applications: Biomedical, Dental, Prosthetics, Fashion, Food, Architecture etc. Industrial trends in RP: DFRP, Design Applications &Advancement in Manufacturing, Tooling & Production. Batch Production and Associated Technologies: Vacuum Casting, Thermo Forming etc. Courseoutcome: After completion of this course students will be ableto CO 1 Understand the fundamentals Rapid Prototyping K1,K2 Technologies for Engineering Applications CO₂ Understand the methodology to Manufacture the Products using SLA, K3, K4 SGC, PolyJet and CLIP Technologies and study their Applications, Advantages and Case Studies & Materials CO₃ Understand the methodology to Manufacture the Products using LOM, Ultrasonic Consolidation and FDM Technologies and study their applications, advantages and case studies & Materials **CO** 4 Understand the methodology to Manufacture the Products using SLS, K3 Binder Jetting and InkJet Fusion Technologies and study their Applications, Advantages and Case Studies & Materials CO₅ Understand the Advancements, Scopes, Design Aspects & K4, K5 Associated Applications & Techniques Text books and Reference Books 1.
